PREFACE

The Institute for Defense Analyses (IDA) prepared this paper for the Office of the Director, Program Analysis and Evaluation, under a task titled "FYDP Related Studies." This paper fulfills the task objective of improving the existing FYDP-related taxonomy of missions and infrastructure by creating a Department of Defense Forces taxonomy and adapting the Infrastructure taxonomy to complement its structure and definitions.

Stanley A. Horowitz, Michael Leonard, and Lance M. Roark of IDA were the technical reviewers for this paper.

EXECUTIVE SUMMARY

The purpose of this report is to describe a new framework for senior decision-makers that organizes and displays every dollar, person, and piece of equipment shown in DoD's Future Years Defense Program. The definitions and relationships that constitute this new framework—called Force & Infrastructure Categories—represent a conceptual model of the DoD. The model is based on two types of organizations, forces and infrastructure, and reflects the division of labor between them. Force organizations are the warfighting ships, squadrons, and battalions assigned to the Combatant Commands. Infrastructure organizations are the laboratories, depots, shipyards, test ranges, schools, and hospitals assigned exclusively to the Military Departments. The model presents *forces* as the tools Combatant Commanders use to fight wars and *infrastructure* as the set of activities needed to create and sustain those forces.

The model groups forces, as the warfighting tools of the Combatant Commanders, into broad operational categories according to their intended use—to operate in space, to defend the homeland, or to fight overseas. These categories recognize the increased role of DoD's intelligence operations along with such non-traditional activities as international engagement and nuclear threat-reduction programs. All of these, taken together, are the department's means for achieving essential U.S. national security goals.

Forces are created and sustained by the infrastructure. Military units are created from people and material—soldiers and tanks, sailors and ships, pilots and aircraft. The infrastructure recruits, trains, assigns, and administers people; it develops, procures, distributes, and sustains material; and it houses military units and helps them communicate. The model arranges infrastructure into four major groups. One group supports people, the second group supports material, the third group provides basing and communications, and the fourth group supports top-level management. Taken together, these groups represent the support functions organized apart from operational forces and assigned exclusively to the Military Departments by the Goldwater-Nichols Department of Defense Reorganization Act of 1986.

Today, we are in a new era of national defense. Decision makers require revised definitions, relevant categories, and a new vocabulary to frame issues, make decisions, communicate intent, and control implementation. The Force & Infrastructure Categories are designed to achieve these purposes—they are designed for the new era.

I. OVERVIEW

Readiness for warfighting is the DoD's fundamental purpose. Readiness deters wars and protects the national security. Under U.S. law, warfighting is led by the Combatant Commanders. The Combatant Commanders receive their missions from the President through the Secretary of Defense and their forces from the Departments of the Army, Navy, and Air Force. This feature of defense organization divides the department into two parts, as established by the Goldwater-Nichols Department of Defense Reorganization Act of 1986 (P.L. 99-433):

- **Forces**—those organizations responsible for employing military forces to fight wars (i.e., the Combatant and Component Commanders) and their assigned military forces.
- **Infrastructure**—those organizations of the Military Departments and Defense Agencies responsible for creating and sustaining military forces (e.g., organizations that support development and procurement of new weapons or recruiting, training, and assigning new personnel).

The Goldwater-Nichols reorganizations and the end of the Cold War began a new era in defense. Since then, there has been renewed emphasis on littoral operations, expeditionary warfare, homeland defense, and counter-terrorist operations. The technology of this new era includes the expanded use of information resources, cruise missiles, unmanned aerial vehicles, stealth aircraft, and the next generation of smart weapons. In addition, non-traditional defense activities such as nuclear threat-reduction and international engagement have been introduced. The operational history of this new era has included peacekeeping and peacemaking in Haiti, Bosnia, and Kosovo; a major theater war in the Persian Gulf; the challenge and response to terrorist attacks on Khobar Towers in Saudi Arabia, on the destroyer USS *Cole* in Yemen, and on the United States itself (the World Trade Center in New York and the Pentagon in Virginia).

This new era requires an evolved framework for senior-level decisionmaking and top-level review. Senior-level managers require issue-relevant categories, with a standard vocabulary and clear definitions to understand how money is being spent. In this way, issues are crisply framed, supporting analyses quickly developed, and decisions effectively communicated. The Force & Infrastructure Categories (F&IC) we describe in

this paper present the first step in updating how the DoD program is presented and understood. It employs new Forces categories based on current operational concepts, reorganizes Infrastructure categories, and more precisely distinguishes forces organizations from the infrastructure that creates and sustains them. It does this consistent with the Goldwater-Nichols Act of 1986, Title 10 of the U.S. Code (see Appendix A), and concepts derived from the managerial accounting technique of Activity Based Costing.[1] The purpose of this report is to describe the logic, theory, and application of this new framework and to explain the criteria for assigning Program Elements (PEs) from the DoD Future Years Defense Program (FYDP) to the more than 150 categories currently included in the F&IC structure.

A. CONCEPTUAL MODEL OF THE DOD

The F&IC model is tailored for use by the DoD's senior leaders and their supporting staff. It is an organizationally based taxonomy rooted in the division between those military units assigned to the Combatant Commands and those activities undertaking the specified infrastructure functions of the Military Departments. The definitions and relationships among the taxonomy's categories represent a conceptual model of the DoD. When PEs are assigned to its categories, it displays the full set of resources (dollars, manpower, equipment, units) identified in the FYDP.[2] This is achieved through the assignment of each PE to only one category. No PEs are split in their assignment. Since all FYDP resources are assigned to this set of PEs, the display becomes a mutually exclusive and exhaustive display of appropriated dollars, manpower, equipment, and units. In general, the F&IC model views Forces category costs as the direct cost of achieving the DoD mission, and it views Infrastructure category costs as the

---

1 Many references describe Activity Based Costing. See, for example, "Measure Costs Right: Make the Right Decisions," by Robin Cooper and Robert S. Kaplan in the *Harvard Business Review*, September-October 1988.

2 As used here, the F&IC conceptual model is an abstraction of the DoD designed to display the associated resources of its component organizations by their various operational roles and types of support. The F&IC shows these organizations as they relate to one another and function together. The conceptual model is independent of the DoD FYDP. When the PEs of the DoD FYDP are assigned to the model's categories, the FYDP-identified resources are displayed consistent with the conceptual model subject only to the strengths and weaknesses of resource assignment within DoD PEs. The terminology for conceptual modeling used here parallels the description outlined in "Supporting Ontological Analysis of Taxonomic Relationships," by Christopher Welty and Nicola Guarino in *Data and Knowledge Engineering*, Vol. 39 (1) (2001) [October, 2001] pp. 51–74.

indirect cost of forces. Together, the costs of forces and infrastructure represent the full cost of carrying out the DoD military mission.[3]

The F&IC model displays the department's forces in their administrative relationship with their supporting infrastructure. Specifically, it displays the forces in their routine, supported relationship with the Military Departments and Defense Agencies. In this administrative display, the model views the forces as the major output of the department and the creation, operation, and sustainment of those forces as its routine, day-to-day activity.[4] The taxonomy displays forces awaiting their operational use by Combatant Commanders. As such, it is a display of forces in readiness for operation. It does not display resources against specific warfighting missions or operational assignments. Instead of warfighting missions, the model displays the forces in their general warfighting roles. In distinguishing roles from missions, it displays forces in the roles they are anticipated to play within national strategy, Military Service doctrine, and joint doctrine. Where possible, dedicated supporting forces are categorized with the forces they support. Naval amphibious ships, for example, are displayed with U.S. Marine Corps ground forces as a dedicated supporting force.

Forces are viewed organizationally within the conceptual model. In the model, Program Elements representing the military units assigned to the Combatant Commanders are assigned to a set of Forces categories representing the general warfighting roles of the department. These military units are thought of as force elements the Military Departments create by organizing material and manpower in accordance with national, joint, and service doctrines. These force elements are expected to fulfill each service's assigned roles and missions. The categories thus established might be used to aggregate the FYDP resources (dollars, manpower, equipment, and units) associated with these force elements. A force element may be the U.S. Navy officers and enlisted service members assigned to crew a Nimitz-class aircraft carrier. It may be the roughly

---

3 This generally corresponds to the military functions of the Department of Defense (Federal budget sub-function 051) and excludes Department of Energy defense activities (sub-function 053).

4 As used here, an administrative display of forces and their supporting infrastructure parallels the concept of Administrative Control (ADCON) the Military Departments typically exercise over their combatant-assigned forces. A specific application of ADCON is its requirement for the Military Departments to support their forces in both peacetime and wartime, primarily through logistics and personnel management activities. ADCON is defined in the JCS Dictionary as: "Direction or exercise of authority over subordinate or other organizations in respect to administration and support, including organization of Service forces, control of resources and equipment, personnel management, unit logistics, individual and unit training, readiness, mobilization, demobilization, discipline, and other matters not included in the operational missions of the subordinate or other organizations."

700 U.S. Army soldiers of an armored battalion operating a small fleet of armored vehicles and trucks. Or it may be the officers and enlisted members of a U.S. Air Force F-15 fighter squadron flying and maintaining tactical aircraft. Each of these military units, and their personnel and material resources, require a complex web of support reaching back to the infrastructure of their Military Departments and to the various Defense Agencies.

Infrastructure is viewed within the F&IC conceptual model as the means for creating and sustaining DoD forces. It views infrastructure as organizations established and sustained by the Military Departments to fulfill their statutory responsibility to man, train, and equip the forces. These organizations, to include Defense Agencies, provide ongoing, continuous, and routine support for the forces as they await use by the Combatant Commanders. They have a wartime mission to continue that support when those supported forces undertake operations. An F&IC Infrastructure display gathers together equivalent types of support across the Military Services and Defense Agencies and organizes them into categories describing their general relationship to the forces. For example, the weapon system acquisition organizations of the Military Services are grouped together. In this case, their general relationship to the forces is the development and procurement of major equipment items for use by the forces. Fundamentally, the F&IC model views infrastructure not as inherently wasteful, but as centralized organizations exercising functions that might otherwise require inclusion within the operational units. This view of infrastructure recognizes that the cost and effectiveness of these centralized functions are always open to questions.

B. INTRODUCTION TO THE FORCE & INFRASTRUCTURE CATEGORIES

This section introduces the top three tiers of the F&IC taxonomy. Appendix B displays the more complete set of categories specifically addressed in Chapters IV and VI. In those chapters, we define additional tiers beyond the top three as necessary to support detailed analyses. Appendix C describes all defined tiers of the F&IC taxonomy.

As Figure I-1 shows, Forces is divided into two major categories, Operating Forces and Command & Intelligence, and one minor category, Forces Resource Adjustments. The Operating Forces category contains the military force structure along with senior-level policy activities for threat reduction and for equipping U.S. military allies. The Command & Intelligence category contains the Combatant Commanders, their senior-level command echelons, and the DoD-related activities of the intelligence

community. Forces Resource Adjustments is a minor category used for adjustments to force resources.

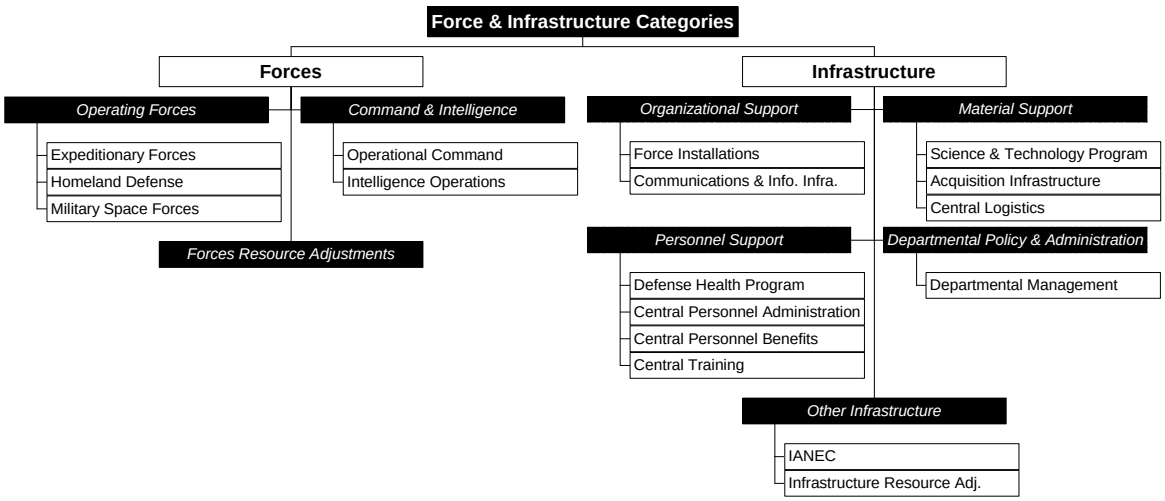

Figure I-1. Overview of F&IC Structure

The Infrastructure categories are a reorganization and refinement of a previously existing taxonomy for DoD infrastructure.[5] Infrastructure is divided into ten main categories that are organized into the four major groups of Organizational Support, Material Support, Personnel Support, and Departmental Policy & Administration. The first three groups respectively support the force's assigned military units, its equipment and supply needs, and its personnel needs. The fourth group integrates and synchronizes the forces and infrastructure and provides overall management to the department. These four analytical groupings of the ten main infrastructure categories help explain the relationship between infrastructure and forces. Understanding that relationship is the first step in judging how important infrastructure is and how big it should be.

One minor group, Other Infrastructure, contains two additional categories, Infrastructure Activities Not Elsewhere Classified (IANEC) and Infrastructure Resource Adjustments. These categories were created to deal with programs and activities still under study for appropriate assignment and for ongoing issues within the FYDP. Including these two categories along with the ten categories addressed above makes a total of twelve Infrastructure categories.

---

5 For additional detail on this previously existing infrastructure taxonomy, see IDA Paper P-3113, "A Reference Manual for Defense Mission Categories, Infrastructure Categories, and Program Elements," by Timothy J. Graves, David Drake, Pamela W. Forsyth, and James L. Wilson, June 1995.

Certain key categories of the taxonomy are intended to closely match budgetary categories that are important to senior decision makers. These include National Foreign Intelligence Program (NFIP), Joint Military Intelligence Program (JMIP), Science & Technology Program, and Defense Health Program. NFIP and JMIP are largely contained within Forces under the category of Command & Intelligence. Congressional Budget exhibits for Base Operating Support (BOS) are given standard categories in most of the ten major Infrastructure categories. Major DoD Headquarters activities, to include both Combatant Command and Management Headquarters, are also given explicit categories within the taxonomy.

To illustrate the relative size of the Forces and Infrastructure categories, Figure I-2 displays the percentage of DoD Total Obligational Authority (TOA) and active-duty manpower for fiscal year (FY) 2000 by category. Infrastructure is divided into the four groups introduced previously. To create the quantities shown, TOA and manpower resources for each FYDP PE were summed separately according to their assigned category.

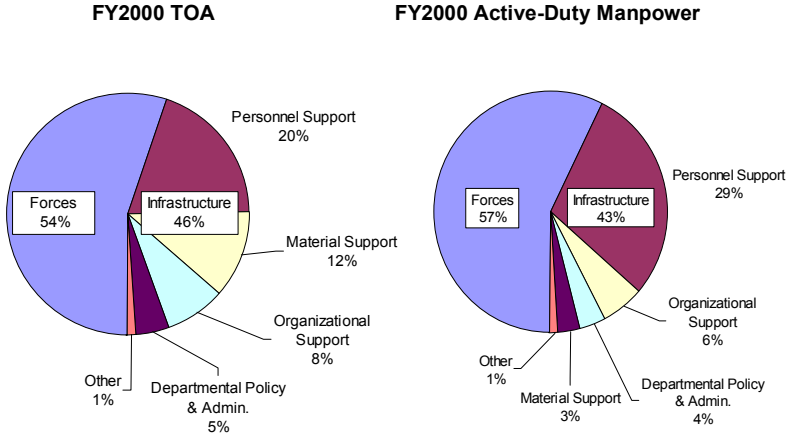

Figure I-2. DoD TOA and Active-Duty Manpower Displayed by F&IC

1. Forces Display

The Forces category contains the military force structure, its command echelons, and its senior-level intelligence programs. Figure I-3 displays the top three tiers of the Forces category. As previously mentioned, Forces are divided into two major categories: (1) Operating Forces, where the majority of the military force structure is assigned, and (2) Command & Intelligence, representing senior-level operational headquarters and intelligence activities.

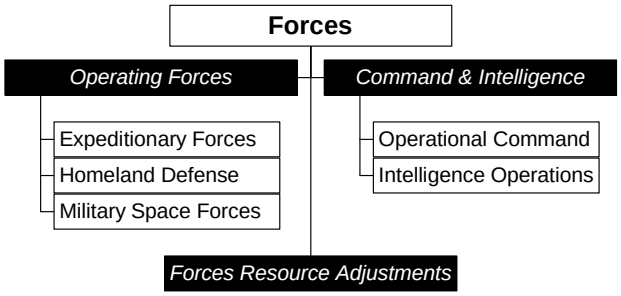

Figure I-3. Overview of Forces Categories

These two major categories are introduced in the following subsections. The third Forces category, Forces Resource Adjustments, is a minor category that is not discussed further here. All three Forces categories are more fully defined in Chapter IV.

a. Operating Forces

The Operating Forces category is the core of the display. Fundamentally, the Operating Forces category represents a particular type of military unit or organization: *one that the Secretary of Defense has or will assign to the Combatant Commands.* The assignment of existing units is made in an annual memorandum signed by the Secretary entitled, "Forces for the Unified Commands." The assignments represent the warfighting ships, battalions, and squadrons of the Military Services along with their organic support. These units are designed, constructed, and supported by the services. The services assign them equipment and personnel and then train and support them in accordance with a service-developed organizational plan. These force units are reflected in FYDP Program Elements that are designed to capture and display their current and projected TOA, manpower, selected equipment, and organizations. In general, the assignment of a Program Element to Forces represents a judgment that (1) all or most of its associated resources are organic to military units assigned to the Combatant Commands and (2) those units are or will be assigned to the Combatant Commands.[6]

The Operating Forces category is divided into: (1) Expeditionary Forces; (2) Homeland Defense; and (3) Military Space Forces. These categories represent operational domains—the broad sets of circumstances against which the Military

---

6 Given that the FYDP's planning horizon extends beyond the one-year time frame of the "Forces for the Unified Commands" memorandum, the assignment of FYDP PEs to Forces requires the assumption that the corresponding units currently assigned by the Secretary will continue to be assigned in the future and that similar units under development will likewise be assigned.

Departments design their forces. These operational domains and the categories they contain are addressed in Chapter III.

b. Command & Intelligence

The Command & Intelligence category represents the activities of military operational headquarters and senior-level intelligence programs. The Command & Intelligence category is divided into: (1) Operational Command and (2) Intelligence Operations. Operational Command consists of the Combatant Command headquarters along with the directly subordinate service component headquarters. Included with Operational Command are those command and control activities and systems that enable the process of military command. The Intelligence Operations category recognizes the set of independent activities undertaken by senior-level intelligence agencies that operate apart from those intelligence resources dedicated to the Operating Forces.

2. Infrastructure Display

The Infrastructure categories represent broad groupings of related activities whose products and services are needed to create and sustain the forces. Figure I-4 shows these groups and their component categories. Each group and the categories they contain are introduced in the following subsections. They are addressed more fully in Chapter VI.

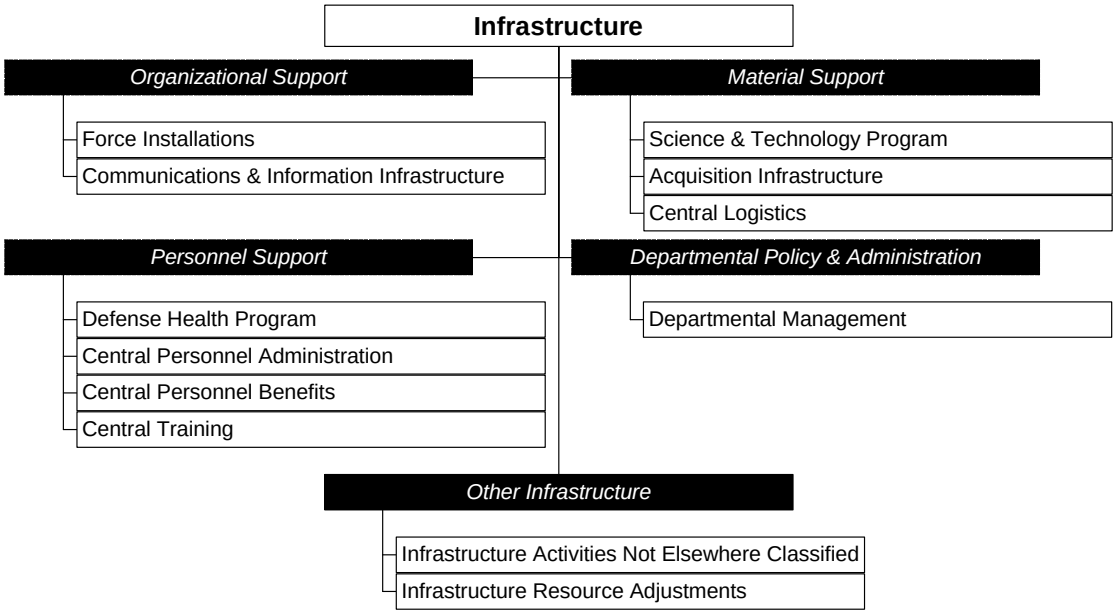

Figure I-4. Overview of Infrastructure Categories

a. Organizational Support

The Organizational Support group operates military bases for Forces-assigned units and provides telecommunications and information services for their use. Organizational Support provides services to Forces units as a whole rather than a set of internal elements, such as personnel or material. This group consists of two categories: (1) Force Installations and (2) Communications & Information Infrastructure. The Communications & Information Infrastructure category specifically includes long-haul telecommunications and base and regional computing services. In addition to their support for the Forces, these activities support Infrastructure categories as well. Communications and installation support services for specific Infrastructure categories are discussed in Chapter V, Section E.

b. Material Support

The Material Support group of categories provides material resources to the forces. These activities develop and support the ships, helicopters, tanks, aircraft, and submarines that equip the forces. There are three Infrastructure categories in this group: (1) Science & Technology Program, (2) Acquisition Infrastructure, and (3) Central Logistics. Science & Technology Program and Acquisition Infrastructure develop the material components needed for future forces while the Central Logistics supplies and maintains today's forces.

c. Personnel Support

The Personnel Support group supports the soldiers, marines, airmen, and sailors assigned to the Combatant Commands by delivering training, health care, benefits, and other services that maintain force personnel levels. This group consists of four categories: (1) Central Personnel Administration, (2) Central Personnel Benefits, (3) Defense Health Program, and (4) Central Training.

d. Departmental Policy & Administration

Departmental Policy & Administration represents the senior headquarters of the Military Departments, the Office of the Secretary of Defense (OSD), the Joint Staff, and the department-wide administrative services that integrate Forces and Infrastructure into a cohesive whole. These policy and resource-allocating organizations coordinate and integrate support to the warfighting forces. Departmental Policy & Administration is represented by the single category Departmental Management.

e. Other Infrastructure

Two categories were created to deal with ongoing issues within the FYDP and for programs and activities still under study for appropriate assignment. They have been isolated here under Other Infrastructure, while under review, to avoid distorting other categories. These two categories are (1) Infrastructure Activities Not Elsewhere Classified (IANEC) and (2) Infrastructure Resource Adjustments.

Each Infrastructure category is designed to tabulate the full cost of its product or service. As a result, where appropriate, an Infrastructure category will contain categories that focus on its own infrastructure. Two specific categories of this type exist in most categories. These categories capture the management headquarters and installations needed to support the category's overall activity. Often these management headquarters categories correspond to major service command organizations that report directly to the headquarters of a Military Service. Other times they may include the headquarters of a Defense Agency. The Central Training headquarters category, for example, contains management headquarters associated with the Army Training and Doctrine Command, the Chief of Naval Education and Training, and the Air Force Air Education and Training Command. Likewise, the installations associated with these various commands are assigned to the Installation Support category within Central Training.

C. F&IC CODING STRUCTURE

The categories in the F&IC structure are each identified with a code made up of an alternating sequence of numbers and letters. The length of the coding sequence can vary by category. These coded categories create a hierarchy of increasingly specific categories of forces and infrastructure. PEs are assigned to the lowest defined level of the structure. An assignment signifies the judgment that the PE carries the characteristics of all levels above it. An F&IC coding always begins with a number. Forces categories begin with the number "1." Infrastructure categories begin with the number "2." Each additional character added to the sequence conceptually subdivides the next higher category into several parts. For example, characters added to an F&IC code beginning with "1" add detail to the category of "Forces". The letter character in the second digit is often suggestive of the category title, although not always. The Central Training category, for example, is coded as "2T." Within the Infrastructure categories, coding conventions were adopted to enable the retrieval of data on management headquarters and installation support distributed to each of its supported Infrastructure categories. To illustrate these coding concepts, Figure I-5 shows the top levels of the taxonomy with

their associated codes. Additional tiers are introduced in Chapters IV and VI. Appendix B contains a more complete display of the categories and associated codes.

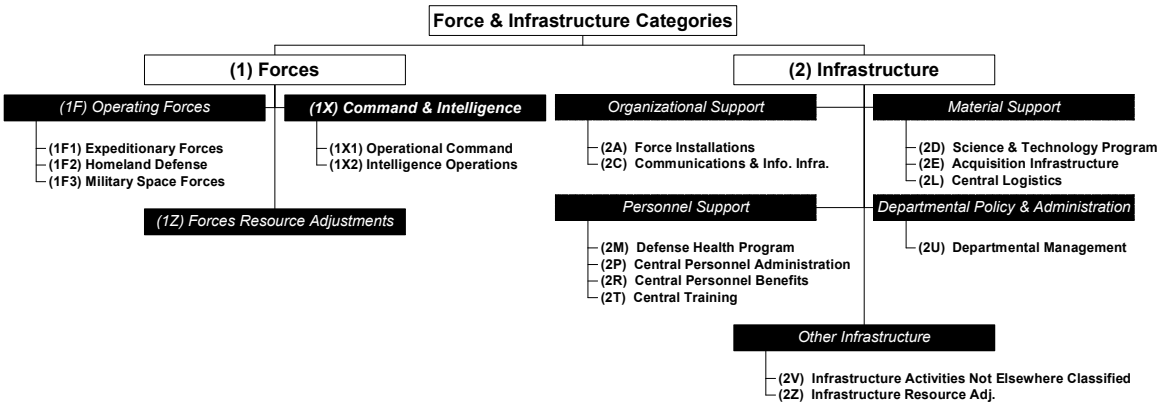

Figure I-5. Overview of F&IC Category Codes

Note that the infrastructure groups we discuss in this paper (Material Support, Personnel Support, etc.) are not captured in the existing coding structure. For example, a code of "2D," a reference to the Infrastructure's Science & Technology Program category, contains no direct information on the association of that category with the Material Support group. To some degree, this omission is explained in the transition from the existing DoD infrastructure categorizations (where the Infrastructure group aggregation does not exist) to the F&IC taxonomy. Future F&IC coding structures may capture these useful aggregates that are used throughout this report.

D. ABOUT THIS REPORT

This paper addresses the Forces and Infrastructure parts of the F&IC separately. Chapter II describes the relationship of the F&IC to the Future Years Defense Program (FYDP). Chapter III explains the conceptual issues affecting the Forces display, and Chapter IV provides detailed information on the content and structure of each Forces category. Chapters V and VI provide corresponding information regarding Infrastructure. Although some of the information in Chapters III through V overlaps with what is provided here in Chapter I, the general discussion of the conceptual model is not repeated. There is, however, more extensive discussion about the relationships between individual categories that expands upon the conceptual model, particularly in Chapter V with respect to Infrastructure's relationship with Forces.

A full set of the category definitions displayed throughout Chapters IV and VI is contained in Appendix C. Program Element assignments to the various F&IC categories are shown by category in Appendix D and in PE order in Appendix E.

II. RELATIONSHIP OF THE F&IC TO THE FYDP

The F&IC conceptual model was developed to display the resources (dollars, manpower, equipment, and units) associated with the DoD FYDP. The effective use of F&IC-based displays requires an awareness of its underlying concepts and the nature of its supporting data. In essence, the F&IC displays are mosaics of information found in FYDP Program Elements (PEs). In preparing and interpreting F&IC-based displays, it is important to understand the nature of the FYDP and its associated PEs. As previously noted, the displays are created by assignment of PEs according to the F&IC conceptual model. In addition to the accurate assignment of PEs, the implementation of the model must also take into account the nature, definition, and consistency of the data assigned to the individual Program Elements. In an enterprise as large and complex as the Defense Department, there are conflicting requirements for resource visibility and accountability that affect the PE as a consistent source of cost data. This chapter broadly reviews the background of the FYDP, its internal program structure, and the evolution of Program Elements within the FYDP before discussing two not wholly compatible goals for representing costs within the FYDP.

A. FYDP BACKGROUND

The FYDP is the DoD's authoritative position on resources. It looks both backward into history and forward into out-year projections. This point is important, because it means that resource decisions made by the senior leadership can be tracked through each phase of the DoD program and budget process. These resource decisions manifest themselves in changes to one or more FYDP PEs. Since the F&IC construct assigns each PE to a unique force or infrastructure category, it provides an exhaustive and mutually exclusive display of all DoD resources consistent with its underlying concepts. This feature is in contrast to the use of many specialized "stovepipe" definitions of specific functions (like "space" or "logistics") that can overlap or collectively may not rigorously account for all DoD resources.

In a formal sense, the FYDP spans only eight fiscal years: the current and prior budget year, representing the congressionally appropriated budgets just completed and now executing, and six future years. However, FYDP prior-year data have been

accumulated since 1962 and now present a programmatic history of the DoD. These historical costs are important for gauging the relative size of DoD activities.[7] The F&IC model has considerable utility for portraying and analyzing DoD resources, but it, of course, has its limitations. FYDP-based resource displays using the F&IC model can portray trends or relationships, but these displays would reflect merely the funding, manpower, or force structure that has been or will be programmed and budgeted. Such data have little or no content regarding questions of sufficiency, effectiveness, or efficiency. To deal with such questions, FYDP-based analyses usually must be augmented with additional, more sophisticated data focused on a specific force or infrastructure category.

Despite these limitations, the FYDP is a rich source of data. There are nearly 6,000 current and historical PEs. More than 4,000 of them are currently active and the rest are in an inactive historical status. The FYDP PEs are the nexus of the cross walk between programs and budgets. They are intended to capture the resources for distinct organizationally based activities and help represent final and intermediate defense output. Defense input, in the form of available resources, are then allocated to each PE as necessary to support that output. Resources shown in the PEs are of three specific types: (1) Total Obligational Authority (TOA), which is funding appropriated to DoD by the Congress, (2) Manpower, which includes military end-strength and civilian full-time-equivalent work years, and (3) Force Structure, which is identified as either items of equipment or combat units. (These FYDP resources are generally referred to within this report as *dollars*, *manpower*, and *equipment* or *units*.) The PEs are designed to represent the integration of these resources into defense output, culminating in a fully supported force structure.

B. FYDP PROGRAM STRUCTURE

In the aggregate, these PEs and their assigned resources define eleven Major Force Programs (MFPs). This program structure was originally intended to display the

---

7 The policies concerning where specific expenses appear in the FYDP have changed over time. For example, until the mid-eighties, spares were funded from the same appropriation that paid for the original equipment item—Navy aircraft spares were purchased with funds from the Aircraft Procurement, Navy appropriation. These spares are now purchased with Operations and Maintenance, Navy funding. This funding policy change can result in startling precipices in trend lines plotted using historical FYDP data. Many discontinuities of this type can now be corrected using data described in IDA Paper P-3543, "Normalizing the Future Years Defense Program for Funding Policy Changes," by Ronald E. Porten, John A. Lobi, David A. Drake, and Arthur C. Yengling, December 2000.

final and intermediate output of the department. Six of these programs are related to forces and five to support. With one exception, the MFPs were defined during the 1960s soon after the DoD Planning, Programming, and Budgeting System (PPBS) was introduced. The eleven MFPs, their constituent PEs, and the associated resources compose the Future Years Defense Program.[8]

There are similarities between the FYDP MFPs and the top-level categories within the F&IC. Like the F&IC, the MFP structure was built on a conceptual model of the DoD consistent with issues and concerns of its time, specifically the late 1950s and early 1960s.[9] The collective output of its six force programs achieved specified defense objectives similar to those associated with the Forces section of the F&IC. Some of the FYDP's five support programs represented resources set apart for separate management and others that were set aside because of the difficulty in allocating them to the forces. They cover many of the same programs found in the F&IC infrastructure, albeit, somewhat more aggregated and less specialized in presentation. For many reasons, the use of the MFPs as analytical aggregates has nearly ceased. One reason may be that these program categories no longer distinguish useful decision categories. For example, Strategic Forces (MFP 1) funding has declined since the early 1960s from about half the size of the General Purpose Forces (MFP 2) to around 5 percent now. These two programs and their content were major conceptual aggregations that drove MFP definition.

C. EVOLUTION OF FDYP PROGRAM ELEMENTS

Over the decades, the role of the Program Element evolved as defense issues emerged. The PEs originally established within an MFP represented major program and resource building blocks that in aggregate defined that MFP. The opposite was true as well; the nature of the MFP itself shaped the definition of its component PEs, along with their assigned type and quantity of resources. While the Program Elements initially were defined strictly in this conceptual context, as the utility of the original Major Force Programs declined with time, PEs began to be created as much for the visibility they gave

---

8 Among many references that outline the conceptual underpinnings of the FYDP, DoD programming, and the PPBS, see *The Economics of Defense in the Nuclear Age*, by Charles J. Hitch and Roland N. McKean, New York, 1965. Hitch implemented PPBS as DoD Comptroller beginning in 1961.

9 The exception to this generalization was the addition of an eleventh Major Force Program in 1986 for Special Operations Forces. A "virtual" MFP was also recently added for space activities. For additional detail on the FYDP and the defined Major Force Programs, refer to DoD 7045.7-H, "FYDP Program Structure," November 2001.

to special interest items as for their importance to the MFP to which they were assigned. This process has created a FYDP that can sometimes be bewilderingly complex.

The FYDP in some ways can now be viewed as a large aggregate of PEs that provides needed accounting information. This contrasts with its original vision as a set of MFPs that were subject to senior-level review, internal tradeoffs, and facilitated departmental integration. In the intervening decades, several internal taxonomies were developed within DoD to fulfill some of the original objectives of the FYDP program structure. These included the Defense Planning and Programming Categories, the Defense Mission Categories, and the DoD Infrastructure Categories. Each categorization was created to fulfill management's need to see resource information in aggregations that were meaningful for their times.

Despite these changes, the FYDP and its PEs remain the only authoritative crosswalk between (1) the programmatic structures DoD favors for making resource management decisions and (2) the budget categories the Congress uses for reviewing budget requests. Because PEs contain the department's historical costs, manpower, and associated forces, these data are an important source of continuity and historical benchmarking for defense analysts and decision makers. However, given that over 6,000 PEs were created in a forty-year period, noteworthy variation does exist in PE definition and data consistency. Within the context of the DoD programming and budgeting process, the following paragraphs outline two of the conflicting goals that have shaped PE definitions and data consistency.

D. VISIBILITY VERSUS FULL COST IN FYDP PROGRAM ELEMENTS

Two fundamental goals in the display of DoD costs have had an important impact on the nature of Program Element data. The first is the accumulation and display of full costs for any given force or infrastructure activity. The second is visibility into certain classes of cost. These two goals are not wholly compatible. Accumulating the full costs of various fighter aircraft, for example, removes visibility into types of support, such as depot maintenance costs, often needed by logistics managers. In multiple ways and over various times, individual Program Elements have been developed that are designed to collect either the full cost of an activity or create visibility into common classes of costs representing subelements of an activity. The following paragraphs discuss each of these types of PEs in more detail.

Creating PEs to accumulate the full cost of an activity is an important DoD goal. The underlying theory of defense decisionmaking, as implemented in the DoD PPBS requires the accurate, consistent computation of full costs for each type of military capability or output. The full cost of individual force elements not only allows purposeful choices among alternative force elements, it also provides a more accurate representation of the resources allocated among the various larger force aggregations, such as Expeditionary Forces or Homeland Defense. The computation of full cost remains an important goal of DoD programmatic accounting. Indeed, it is an important element of government-wide managerial accounting reforms.[10]

However, the full cost of an activity is seldom collected in a single Program Element. While PEs of this design can collect the direct costs of developing, procuring, and operating a weapon system (or an organization) over its entire life cycle, they often do not collect many indirect costs. For example, the direct costs for the Air Force F-111 fighter-bomber are visible in a set of PEs over its roughly thirty-year life cycle. However, few of these PEs include many indirect costs from infrastructure activities, particularly logistics activities or training and medical expenses that supported the pilots and maintenance crews. Nevertheless, PEs of this type, even with only direct costs, have been a significant improvement for top-level DoD decisionmaking when compared with budget exhibits that focus on cost types such as Military Pay.

There is an inherent tension between the desire to know the full cost of owning a weapon system and the desire to know the total cost of its input—especially if that input is likely to appear in many other programs across the DoD. This objective leads to a second category of Program Elements, those developed to make specific types of costs visible in the FYDP. These costs are not the costs of the department's output, such as a major aircraft programs or the development and operation of an aircraft carrier, but instead are usually common support costs contained in centralized programs supporting these operational systems.

---

10 *Statement of Federal Financial Accounting Standards No. 4: Managerial Cost Accounting Standard* (July 31, 1995, p. 318) states in part: "Reporting entities should report the full costs of outputs in general purpose financial reports. The full cost of an output produced by a responsibility segment is the sum of (1) the costs of resources consumed by the segment that directly or indirectly contribute to the output, and (2) the costs of identifiable supporting services provided by other responsibility segments within the reporting entity, and by other reporting entities." It further states, again in part, "The cost assignments should be performed using the following methods listed in the order of preference: (a) directly tracing costs wherever feasible and economically practicable, (b) assigning costs on a cause-and-effect basis, or (c) allocating costs on a reasonable and consistent basis."

The cost of operating defense installations is an example of such a support cost. Basing is an inherent cost of any force element, yet it is a common support function across the department. In the FYDP, the cost of defense installations is contained within its own set of Program Elements, which usually cannot be directly associated with an individual force element. For example, the number of Program Elements addressing Base Operating Support (BOS) costs has expanded to provide DoD-wide accounting data for special interest items requested by OSD or the Congress. New BOS PEs for base communications, real property services, child development, family centers, environmental conservation, environmental compliance, pollution prevention, maintenance and repair, minor construction, and disposal or demolition of excess facilities have been created over the years to provide visibility into these individual costs.

E. EFFECT OF DEFENSE WORKING CAPITAL FUNDS

The competing goals of full cost and visibility have been important factors in Program Element definition and use. Sometimes the goal of accumulating the full cost of defense systems can have greater effect on certain kinds of PEs than on others. For example, a persistent difficulty in computing the full cost of forces is the inclusion of reasonable estimates for depot maintenance functions. The funds and manpower for depot maintenance have historically been carried in centrally funded logistics Program Elements assigned to the infrastructure. These and other logistics costs historically required management visibility and were difficult to associate with the forces they supported. The advent of the Defense Working Capital Funds (DWCF) was an important development that transformed more of these centrally funded logistics costs into direct costs in the force element PEs.[11] The effect is that a much greater fraction of the full cost can now be accumulated within those PEs.

In general, DWCF and their predecessors have made it possible for most supply and part of the depot maintenance costs to be shown as a part of the "customers" cost in each consuming activity. A "customer" or consuming activity may be either a forces element, such as an F-15 squadron, or it may be an infrastructure activity such as the naval training aircraft used to qualify new pilots. When DWCF funding is used, part of the cost of a force

---

[11] We refer to the four major working capital funds (WCFs) within the DoD as the Defense Working Capital Funds (DWCF). The four funds are the Army WCF , the Navy WCF, the Air Force WCF and the Defense-wide WCF. Annual reports for each of the funds can be found at www.dtic.mil/comptroller/budgetindex.html. Click on "Links to Detailed Budget Material" under "Latest Defense Budget."

element's supporting infrastructure is shifted to the consuming force element's PE, and funds for that support are then directly appropriated to fund the consuming force element. Although DWCF funding is largely associated with the relationship between the Forces and their supporting Infrastructure, the DWCF concept is also used for funding certain airlift and sealift forces. This DWCF relationship within Forces is outlined in Chapter IV in the discussion of Mobility Forces. The impact of DWCF on the display of other FYDP resources, such as manpower, is discussed in Chapter V.

The expansion of the DWCF has had a significant effect on the FYDP, as discussed in the following section. In summary, when DWCF funding has been used, significant portions of Infrastructure support costs have been successfully associated with the force elements they support. The use of DWCF funding has shifted significant quantities of TOA resources into Forces PEs. In the competing goals of full cost or visibility for senior leadership, the DWCF represents a significant step towards accumulating the full cost of Forces. Not surprisingly, there have been criticisms of DWCF funding as reducing FYDP visibility into certain types of DoD costs. Thus, the conflict between full cost and visibility continues.

Despite the DWCF's success on behalf of full cost, the existence of 6,000 PEs along with those created each PPBS cycle argues that visibility remains an important driver in PE creation and definition. Given the diversity of Program Elements, a fundamental purpose of the F&IC taxonomy is to aggregate PEs into categories defined by the underlying conceptual model, thus estimating the cost of that category and displaying its other associated resources.

An important use of the F&IC display is to show how resources are allocated among the DoD's force and infrastructure activities. The presentation of dollar resources is an important use of the display, and it is important to note that the dollar figures are all appropriated dollars. A dollar figure associated with a Forces or Infrastructure category has little meaning until the activities supported by that figure are understood and we know the degree to which the full costs of the activities are covered. That means two things: (1) the categories within the display must be carefully defined, and (2) the most important factors affecting the costs covered in Program Elements must be understood. One key to comprehending what costs are covered is understanding cost allocations within the FYDP, a subject touched on here. Specific ways in which the resources in the PEs affect the F&IC displays are addressed in Chapters III and V. Chapter III, Section E, describes forces and the display of their full costs while Chapter V, Section F, focuses on the costs of the infrastructure itself.

III. FORCES CONCEPTS

Forces are the tools Combatant Commanders use to fight wars. Forces are created by the Military Departments and assigned to Combatant Commands as required under the Goldwater-Nichols Act of 1986. A key doctrinal publication for joint warfighting describes the process as follows:[12]

> Each of the Military Departments and Services, coordinating as appropriate with the other Departments and Services and with the combatant commands, has the responsibility for organizing, training, equipping and providing forces to fulfill certain specific roles and for administering and supporting these forces.

These specific force roles include requirements for land, sea, air, and space operations along with numerous supporting functions.[13]

The process of developing force roles occurs within a number of operational contexts, including major theater wars, nuclear war and its deterrence, and operations other than war. Within these contexts, force roles are created to satisfy the anticipated operational missions assigned to the Combatant Commands. Within these broad operational domains, the Military Services apply their doctrines to create effective forces relevant to the anticipated missions. As an example of these processes, the Army is given the responsibility for creating forces for "combat operations on land—specifically forces to defeat enemy land forces and to seize, occupy, and defend land areas."[14] Within the context of major theater wars, the Army formulates and then develops the organizations, equipment, and means of sustainment necessary to provide these capabilities for the Combatant Commanders. The capabilities thus created can be thought of as a specific force role. A similar force and support development process goes on in each of the Military Services. This interaction between assigned responsibilities, anticipated missions, and service doctrine creates a varied and complex set of military forces.

13 Warfighting roles are assigned in DoD Directive (DoDD) 5100.1, "Functions of the Department of Defense and Its Major Components," September 25, 1987.

14 DoDD 5100.1, "Functions of the Department of Defense and Its Major Components." September 25, 1987, p. 17.

A. DEFINITION OF TERMS

Forces are displayed within the Force & Infrastructure Categories (F&IC) consistent with the conceptual overview just described. Operational circumstances and the doctrinal preferences of each Military Department shaped the construction of the Forces taxonomy. It displays the military force structure in a series of *operational domains*, each with its own underlying *force roles.* These roles are designed to illustrate the anticipated use or purpose of the assigned forces as the Combatant Commands could use them.[15] In this context, an operational domain represents forces for a major theater war, for space operations, or for direct defense of the U.S. homeland. A force role can be defined as a series of military units oriented towards achieving a specific type of warfighting capability within a given operational domain. Forces for achieving air or sea control or for strike operations are examples of force roles.

Military units that combine to achieve force roles are referred to here as *force elements*. These force elements often correspond to specific Program Elements of the FYDP. Air Control is a specific category within the overall Forces taxonomy. Examples of service force elements from the Air Control category are:

- *Army:* A unit equipped with Patriot missiles designed to protect other ground-based units in surrounding areas.
- *Navy:* F-14–equipped fighter squadrons designed to provide air defense for the ships in a battle group.
- *Air Force:* F-15–equipped fighter squadrons that provide counter-air protection for an air expeditionary task force.

Force elements designed for specific uses are a key feature of the Forces taxonomy. Most force elements are inherently multi-role, that is, they often have the capability to support several warfighting roles. In this taxonomy, a force element is assigned to a warfighting role based on its primary design role or the role in which the service prefers to use it. Therefore, this approach seeks to display a force element in accordance with its expected use, recognizing that it can fulfill other roles. This simplified view of U.S. forces is intended to highlight for senior decision makers how Combatant Commanders can be expected to use specific force elements.

---

[15] The warfighting roles, their subcategories, and the subsequent assignment of Program Elements to them are designed to broadly illustrate the uses of the military force structure. Since the forces can be used in a variety of ways, there are other ways in which these forces could have been organized.

The taxonomy generally displays forces awaiting their wartime operational use by the Combatant Commanders. However, the new era in defense has increased the breadth and duration of operational activities, particularly for Expeditionary Forces. These activities include extensive activities sometimes labeled Military-Operations-Other-Than-War (MOOTW), such as peacekeeping by U.S. ground forces and the use of cruise missiles for counter-terrorist campaigns.[16] For Expeditionary Forces, these activities are in contrast with their use within major theater wars. The forces taxonomy is suggestive of these larger sets MOOTW missions as well. The Forces category also displays other significant peacetime activities within the DoD that expand the scope of operational activity. These include important initiatives for the national leadership that carry out treaty compliance, arms control implementation, and threat reduction. These initiatives, along with recognition of the expanded use of the military forces in operations other than major theater wars, have also been given a place within the display.

B. OPERATIONAL DOMAINS

Operating forces constitute the direct means by which the Combatant Commanders undertake operations. These are the specific classes of ships, operational fighter squadrons, infantry divisions, and attack submarines that the Combatant Commanders use to achieve their missions. Although operational domains (Expeditionary Forces, Homeland Defense, and Military Space Forces) are the first subdivision of the Operating Forces category, specific force elements are actually assigned at an additional level of subdivision (Ground Combat and Strike, for example). Because of the additional levels of detail, operational domains can sometimes be overlooked.

Operational domains represent the context and operational purpose of their assigned force elements. Their various resource allocations and relationships can be seen more clearly at this level. For this reason, operational domains can be a useful level of analysis for examining the defense program. Providing a conceptual background for operational domains aids not only these analytical objectives, but also provides the intellectual underpinnings needed for the replicable assignment of Forces PEs to various categories under each domain.

---

16 The JCS Dictionary (JP 1-02) defines MOOTW as, “Operations that encompass the use of military capabilities across the range of military operations short of war. These military actions can be applied to complement any combination of the other instruments of national power and occur before, during, and after war.”

An operational domain represents a reasonably separable, enduring pattern of operational activity important to senior decision-makers. An operational domain may be an operating environment that imposes a common pattern on its users and special restrictions on its interaction with other military environments. The domain of Military Space Forces fits that definition. Or an operational domain may be set apart from other domains for additional reasons. For example, the extreme sensitivity and compressed time-scales of nuclear warfighting justify Homeland Defense's status as an operational domain, as does the renewed emphasis on homeland defense since the attacks of September 11, 2001. An operational domain represents some combination of physical environment, operational circumstance, or policy choice that creates patterns of operational activity or force use.

C. PATTERNS OF FORCE ROLES WITHIN OPERATIONAL DOMAINS

Within each of the defined operational domains there is a common pattern. If the domain level of the taxonomy is viewed as a set of general operational problems, it is not surprising that the categories it contains are built up from the fundamental military concepts of offense and defense. These general concepts may not be explicitly represented within a domain, but they are, nevertheless, the conceptual underpinnings of the force elements in that domain. Each operational domain contains one or more category capable of offensive operations. Likewise, the general concept of defense is introduced by placing one or more enablers (e.g., air control, sea control, etc.) into a given domain.

An enabler is a force role necessary to the exercise of other capabilities, especially offensive capabilities. Enablers have been defined as those critical supporting roles that are necessary to the application of military force.[17] The class of defensive enablers is exemplified in the concept of control. Various service doctrines postulate the control of oceans or airspace or land as the first requirement of subsequent offensive operations. Control as a class of enablers translates into a capability to regulate an opponent's use of land, sea, or air. We introduce explicit categories for enablers of this type in all three operational domains. Within the Expeditionary Forces domain, they are

---

17 The 1997 Quadrennial Defense Review described enablers as, "Critical to power projection and to our unique ability to both shape the international security environment and respond to the full spectrum of crises are a host of capabilities and assets that enable the worldwide application of U.S. military power." ("Report of the Quadrennial Defense Review," William S. Cohen, May 1997, Chapter III: Defense Strategy, p. 17.)

represented as Air Control and Sea Control categories. Within the Military Space Forces domain, the Space Control category represents those means that work towards continuing the unhindered friendly use of space.

These enabling defense capabilities are often explicitly created by the Military Services through the development of specialized systems and organizations. Examples include aircraft optimized for air-to-air combat and ships and submarines designed primarily for the interdiction of other naval vessels. This pattern of defensive enablers occurs often within the operating forces taxonomy.

D. FORCE INTERACTIONS

The concept of enabler raises the conceptual issue of how force interactions should be represented within the taxonomy. Given the importance of control, and its relationship with offense, both offensive and defensive roles are frequently organic to military systems or organizations. Aircraft may, for example, be designed for offensive operations but retain significant defensive capability, both for pure air control missions and for self-defense within their offensive roles. Often ground forces with significant offensive capability can be expected to simultaneously possess significant defensive capability. Aircraft carriers, as another example, may play an offensive or defensive role according to the operational circumstances.

Within an operational domain, offensive and defensive warfighting roles are distinguished where significant forces are primarily designed for the enabling roles. However, the interrelationship of these enabling categories can never be wholly separated from the offensive operations they facilitate. Strike operations by tactical aircraft require air control, which may be inherent in the design characteristics of those forces or may be supplied by specialized forces. Naval strike operations also require sea control, which may exist by virtue of the designed characteristics of a naval platform or the presence of specialized forces.

There can be other interactions within a given domain. The concept of enabler is wider than just that of defense. It can identify supporting elements such as airlift and sealift that facilitate the combat roles. Also included in the enabler concept are other centralized supporting elements such as intelligence and communications. Where enabling support exists that is not dedicated to a specific category and instead supports several roles, a separate category is typically created within an operational domain. The

Mobility category within Expeditionary Forces and the Force Enhancement category within Military Space Forces are examples of these separate supporting categories.

Within an operational domain, enablers (both combat and support elements) that are dedicated to a single force role (such as organic intelligence or communications support for the Strike or Ground Combat force roles) are assigned to the category they support. For example, naval amphibious ships are dedicated to Marine Corps ground and air elements and are assigned to the Ground Combat category.

Where support is more general and cannot be associated with a given force role or usefully given its own category, support is assigned by service to a specified enabling category such as Air Control or Sea Control. For example, general naval support for expeditionary forces is assigned to Sea Control, and generalized Air Force support for its expeditionary forces is assigned to Air Control. This convention for PE assignment, identified in the category definitions in the chapter that follows, recognizes the interdependence of these enabling categories with other force roles.

E. FORCES AND THE DISPLAY OF THEIR FULL COST

This section focuses on the varied ways costs are handled for forces personnel and material, and how the costs for those resources are allocated to Forces or Infrastructure activities. It points out where cost assignments are different than the reader might reasonably expect. Often these differences spring from departmental policies that differ from one expense area to another. The focus of this discussion is on the forces and the display of their full costs in conjunction with the infrastructure. A similar discussion in Chapter V focuses on the costs of the infrastructure itself. As background for this discussion, it is useful to review and summarize the conceptual model underpinning the Force & Infrastructure Categories.

1. DoD Conceptual Model Summary

The model displays the costs and purposes of DoD activities in relevant, consistent categories that are useful to DoD decision makers. The taxonomy presents the department as it organizes, trains, equips, and supports its military forces. The combination of the forces themselves and the infrastructure that supports them constitute the full cost of DoD's warfighting capability. The model's fundamental structure recognizes the clear divide that exists between forces and their employment, in contrast with the activities that create and sustain those forces. The taxonomy seeks to display costs on this basis and show them in a consistent way.

The model views forces as an aggregate of military units each of which is composed of assigned personnel and material. Material in this case represents all supplies, consumables, and major equipment items. Each of these classes of unit resources, personnel, and material require a distinct class of support within the infrastructure. The Infrastructure categories represent distinguishable classes of goods and services that are ultimately used by the forces. They are part of the full cost of those unit resources. Differences arise in the degree to which the full cost of forces personnel and material are assigned to the Forces category. These differences are based on service practice or departmental policy. In addition, there are differences within the infrastructure itself in the way the costs of material or personnel are assigned. The following subsections discuss where costs are shown in a straightforward way and where there are important differences. Keep these differences in mind as the results of this model are considered for inclusion in studies or decision papers.

2. Accounting for Forces Material and Military Personnel Costs

The FYDP balances the desirability of accumulating the full cost of each force element with the requirements for visibility into the supporting infrastructure. These conflicting goals have led to varied arrangements for accumulating and displaying costs. These arrangements are most pronounced between Forces-assigned material and military personnel. The differences affect F&IC-based data. The full cost of Forces-assigned material, such as warfighting ships, aircraft, and armored vehicles, includes the development and procurement costs of these major equipment items. It also properly includes the cost of fuel, supplies, equipment spares, and the periodic depot maintenance required over the life of the equipment item. With the exception of depot maintenance, the cost of each of these sustaining expenses is reasonably well aligned with the Forces-assigned Program Elements in the FYDP. The means for this alignment of sustaining costs are the Defense Working Capital Funds (DWCF). However, for certain DWCF activities (depot maintenance for Army aircraft and vehicles, Navy and Marine Corps aircraft, and Marine Corps vehicles), the resources are retained within centrally funded infrastructure Program Elements. Alternatively, depot maintenance costs for Navy ships and Air Force aircraft are aligned with forces Program Elements. Nevertheless, on the whole, a reasonably high fraction of total material costs for forces are shown with the forces. The material costs of infrastructure activities are also reasonably well aligned.

A smaller fraction of the full cost of military personnel assigned to Forces is shown with those forces. Composite pay, allowances, and retired pay accrual associated with all

personnel are aligned accurately in Program Elements assigned to either Forces or Infrastructure. However, the costs of personnel acquisition and personnel benefits are pooled and not included in the cost of individual personnel positions. Specifically, the cost of recruiting, training (except unit training), and educating forces personnel is displayed in centralized categories within Infrastructure. These same costs for Infrastructure-assigned personnel are also misaligned. Similarly, personnel benefits costs available to all personnel, in either Forces or Infrastructure, are shown exclusively in Infrastructure. These include military health care and central personnel benefits such as commissaries and DoD schools.

Chapter IV contains a more detailed discussion of this topic.

3. Effect of Varied Material and Personnel Cost Assignment

The effect of these arrangements can be said to understate the costs of personnel shown in the Forces categories and in the Infrastructure categories as well. To contrast this with the way material costs are handled, recall that the full cost of the DoD warfighting capability is obtained by summing force and infrastructure costs. A more complete display of cost for the material and military personnel assigned to forces can be constructed by adding to them the whole cost of selected Infrastructure categories.

Figure III-1 shows an approximation of these costs, which roughly illustrates the differences in the way the DoD handles each resource. It shows that over 75 percent of material costs for military units assigned to Forces are associated with the F&IC Forces category, while slightly more than 40 percent of the forces' full military personnel costs are displayed in the Forces category. The effect of this tendency is to show more of the cost of a material-intensive force element with Forces categories. Alternatively, less of the cost of a personnel-intensive force element tends to be shown with Forces categories. These effects are embedded in the Program Elements as currently established. Any effort to mitigate these effects means changing the assignment of costs to the individual Program Elements.[18]

---

[18] Figure III-1 represents approximately 83 percent of DoD's TOA for FY 2000. The estimate for Material costs associated with Forces includes Research and Development (R&D), Procurement, and Operations and Maintenance (O&M) appropriations from PEs assigned to Forces, minus an estimate for the pay of civilians contained in those PEs. The estimate for Military Pay costs associated with forces includes Military Personnel appropriations from PEs assigned to Forces. Infrastructure category costs in the figure include all appropriations from PEs assigned to each of those Infrastructure categories. The figure is intended to demonstrate a tendency and is an approximation. The exclusion of other factors, such as infrastructure activities supporting other infrastructure, can further refine its conclusions. The approximately 17 percent of DoD TOA for FY 2000 not included in Figure III-1 is for the pay of civilians contained within Forces-assigned PEs, the Departmental Policy & Administration Infrastructure group, and the Organizational Support Infrastructure group.

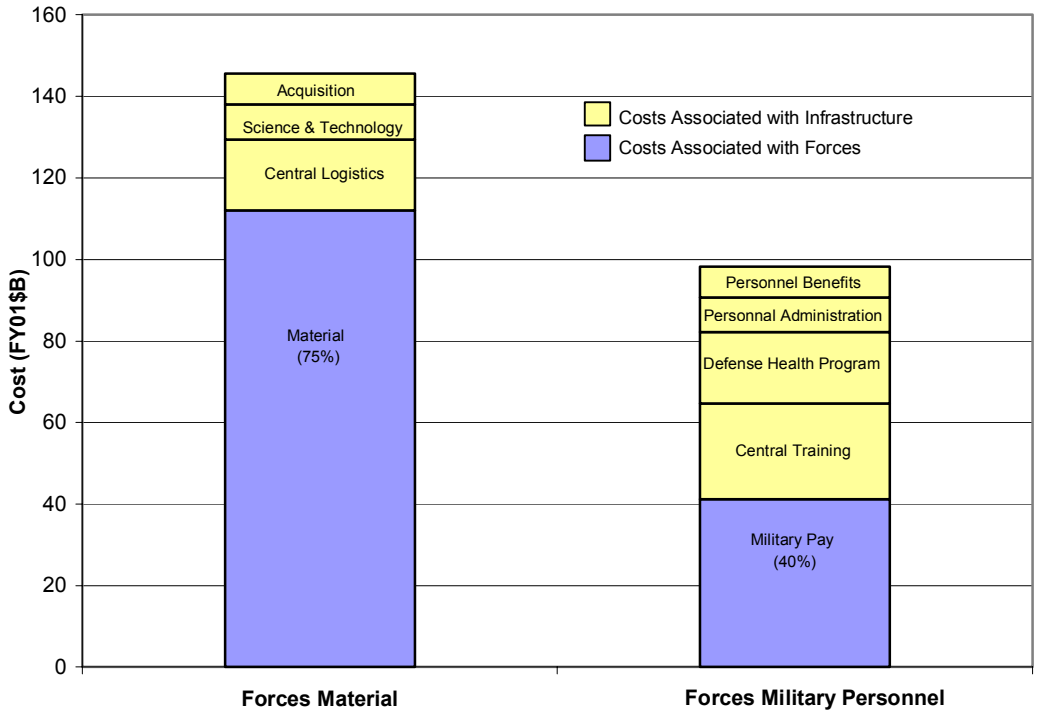

Figure III-1. Impact of Varied Material and Personnel Cost Assignments

IV. FORCES CATEGORIES

A. FORCES DISPLAY OVERVIEW

The military force structure is assigned to the Combatant Commanders in an annual memorandum signed by the Secretary of Defense. Typically entitled "Forces for the Unified Commands," the memorandum represents the formal assignment of existing units, their equipment, and their organic support to specific Combatant Commands. These assigned activities cover a range of combat and organic support activities. They include, for example, the following explicit means of warfighting: warships, attack aircraft, and mechanized formations. They also include the organic activities with which the warfighting echelons are designed to operate. Examples of organic activities include logistics units that support manpower and equipment, communications and intelligence units, and the operational headquarters that directs the forces. These resources encompass the range of activities designed to operate under the operational command of the Combatant Commanders.

Figure IV-1 shows the structure and assigned codes of the first three tiers of the Forces portion of the F&IC. The Forces category has three components: Operating Forces, Command & Intelligence, and Forces Resource Adjustments. The first two are the major components of the Forces category.

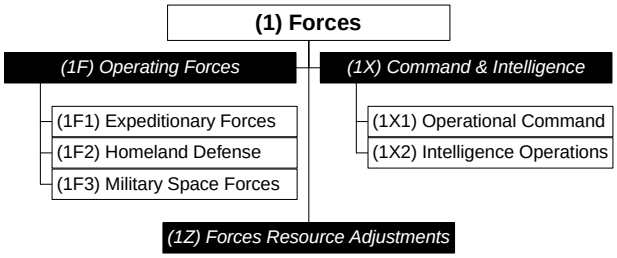

Figure IV-1. Overview of Forces Categories and Codes

Operating Forces represents the warfighting tools of the Combatant Commanders. Specifically, it represents the Army Divisions, Navy ships and submarines, and Air Force fighter and bomber squadrons assigned to the Combatant Commanders. Also included in Operating Forces are the organic support units that sustain and enhance the warfighting

units, for example, logistics and intelligence units. Taken together, these warfighting units and their organic support constitute the vast bulk of the military force structure.

In contrast, Command & Intelligence represents the Combatant Commanders themselves, their direct staff, their dedicated command and control activities, senior-level intelligence programs, and the component headquarters that direct the operating forces.

Both Operating Forces and Command & Intelligence contain additional tiers of assignment that are addressed in the following subsections.

Forces Resource Adjustments is a minor Forces category that contains technical adjustments to Forces resources, such as FYDP Program Elements for foreign currency fluctuations, which cannot be allocated to other, more-specific Forces categories.

1. Operating Forces

Operating Forces, where the bulk of military forces are assigned, contains the following three broad categories (operational domains) that encompass a range of force roles:

- ***Expeditionary Forces*** contains forces designed for major theater wars and lesser contingencies. Its orientation is to display land, sea, and air forces designed for deployed operations outside the U.S. The majority of the military force structure is displayed in its five categories: Strike, Air Control, Sea Control, Ground Combat, and Mobility.
- ***Homeland Defense Forces*** consists of nuclear deterrent forces, continental air defense assets, counter-drug operations, and arms control and threat-reduction activities. It is composed of three categories: Deterrence, Protection, and International Engagement & Threat Reduction.
- ***Military Space Forces*** contains space-based military assets and their organic ground support. These forces can operate in support of both Homeland Defense forces and Expeditionary Forces. Four categories constitute the detail within the domain: Space Force Launch, Space Control, Force Enhancement, and Space Combat.

2. Command & Intelligence

Command & Intelligence forms the second half of the Forces category and recognizes the interrelationship between senior headquarters and senior-level intelligence programs. The categories under Command & Intelligence are:

- ***Operational Command*** includes operational elements of Combatant Command headquarters, their component commanders, along with the

supporting command and control systems. These systems, comprised of the units, platforms, and technologies that link senior commanders with their forces and higher headquarters, are viewed here as separate from tactical command and control systems that are organic to operating forces. Operational Command is made up of two categories: Operational Headquarters and Operational Command & Control Systems.

- ***Intelligence Operations*** gathers together operational activities of the National Foreign Intelligence Program (NFIP), the Joint Military Intelligence Program (JMIP), and other centralized intelligence assets not routinely associated with the operating forces. The entire NFIP and JMIP programs are not contained in the category; management headquarters and basing activities are assigned to Infrastructure categories. The Intelligence Operations category also excludes intelligence activities or sensors organic to the operating force units and those intelligence assets assigned to operational headquarters. Surveillance and reconnaissance units directly used by the operating forces and under their control are assigned to the Operating Forces. The category consists of three categories: NFIP, JMIP, and Intelligence-Related Activities.

B. FORCES CATEGORY DESCRIPTIONS

The accuracy of the F&IC display is closely linked with the accurate assignment of each PE to the appropriate category. Each PE is assigned to one and only one category. Said another way, no Program Element is split for assignment to multiple categories. For this reason, understanding the conceptual model behind the display is crucial to correct PE assignment. Correctly distinguishing between Forces and Infrastructure and, in turn, between their categories requires rules for discriminating between the PEs. The objective of the rules is to provide the most succinct basis for PE assignment without straining to cover every possible case.

These rules are expressed as a series of terse and precise definitions, recognizable by shadowed boxes, as shown below for the overall definition for the Forces category.

(1) Forces

Military units assigned to the Combatant Commands, their command and control elements, and their organic supporting units. The resources (dollars, manpower, and equipment) allocated to these units are associated with forces. In addition, agencies that are engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense are included, along with the national and joint military intelligence programs.

Definitions seek to provide reasonably precise criteria for the assignment of resources contained within Program Elements of the Future Years Defense Program. Consistent assignment of PEs in harmony with the objectives of the display create accurate resource and cost information for senior decision-makers and their staffs. Appendix C contains a full set of definitions for the entire F&IC hierarchy. The remainder of this chapter defines the first three tiers of Forces categories.

(1F) Operating Forces

Forces assigned to the Combatant Commands, along with their closely related activities, operating resources, and those agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense.

Within Operating Forces, three operational domains have been defined. Each domain contains a series of roles that summarize for senior decision-makers the range of warfighting activities and resources associated with the operational domain. With few exceptions, Operating Forces represents those force units assigned to Combatant Commanders. Within the taxonomy, force units are assigned to specific categories based on their primary designed use and their expected employment within an operational domain. Activities organic to a given warfighting role are assigned to the category they support. Generalized support of the Military Services through units and resources expected to be assigned to the warfighting commands are assigned to a specific enabling category by convention. For example, within Expeditionary Forces, generalized naval support is assigned to the Sea Control category. Generalized support for the Air Force is assigned to the Air Control Category. No specific enabling category is associated with the ground forces. Generalized support for land forces is assigned within the Ground Combat category.

Figure IV-2 shows three tiers of Operating Forces categories and their associated category codes.

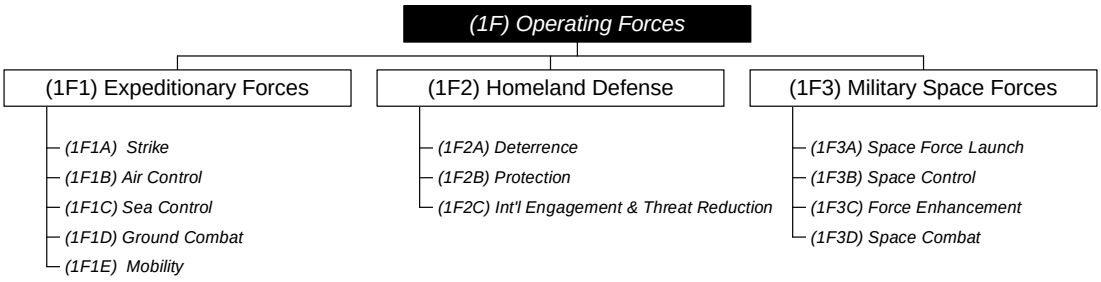

Figure IV-2. Operating Forces Categories and Codes

(1F1) Expeditionary Forces

Operating forces designed primarily for non-nuclear operations outside the United States.

The Expeditionary Forces category represents the theater warfighting capabilities of the military force structure. These forces can expect assignment to those Combatant Commands with responsibilities oriented toward theater warfighting. With respect to resources, it is the largest of the three operational domains. These categories constitute a range of warfighting roles that, in various combinations, equip the Combatant Commands for theater warfighting missions.

Expeditionary Forces comprises five categories: (1) Strike, (2) Ground Combat, (3) Air Control, (4) Sea Control, and (5) Mobility. Three of those contain specialized enabling capabilities and the other two contain the means for offensive operations. Many of the assigned forces are inherently multi-role, both in the context of theater warfighting and in other types of military operations, such as small-scale contingencies and peacekeeping operations. Thus, while the taxonomy is focused on theater warfighting, it is designed to be suggestive of other capabilities. Within the context of theater warfighting, the taxonomy assigns force units to the role they are primarily designed to accomplish.

(1F1A) Strike

Expeditionary forces designed to damage and destroy enemy targets at long ranges from friendly bases. Strike forces are designed to deliver their effects through penetration and withdrawal from enemy territory or by delivery of standoff weapons at extended ranges.

The Strike category includes both Air Force and Navy aircraft and cruise missiles that are primarily designed for attacks against targets at long-distances from friendly bases. These attacks are accomplished by forces designed to penetrate into unfriendly territory and return or by long-range standoff weapons. The category includes aircraft carriers and those naval surface combatants that operate in mutual support of the aircraft carrier and are cruise-missile capable. Special Operations Forces (SOF) are included in light of their ability to penetrate target areas, operate, and withdraw.

(1F1B) Air Control

Expeditionary forces designed primarily to defeat enemy air attacks within a military theater. Air control forces enable the capabilities of other forces to be brought to bear against the enemy. Air Control includes protection against Theater Ballistic Missiles.

Air Control represents the enabling force role that denies use of the air to an opponent and enables the capabilities of other forces to be brought to bear in theater warfighting. This category includes defense against theater ballistic missiles. It contains those systems and units designed specifically to defeat enemy air attacks and which provide common support to multiple force elements. Forces typically assigned to this category include Air Force F-15 and Navy F-14 fighter aircraft, and Patriot surface-to-air missiles assigned to theater-wide air defense. Other resources with air control–type capabilities that are dedicated to warfighting forces assigned in other categories are assigned to those other categories. For example, anti-aircraft weapons organic to ground force units are assigned to Ground Combat. Area support for theater warfighting forces are contained in the Air Control category.

Air Control is doctrinally viewed as the key enabling mission for all Air Force theater warfighting operations. Air Force supporting forces assigned to a Combatant Commander that are not dedicated to a strike mission are assigned to the Air Control category.

(1F1C) Sea Control

Expeditionary forces designed to deny offensive use of the seas to the enemy and to secure sea-lanes against interdiction. Sea control enables the capabilities of other forces to be brought to bear against the enemy.

The Sea Control category represents the enabling force role that secures the use of the sea for friendly forces and denies its use to an opponent. Anti-submarine warfare (ASW) is a key role within this category. The Sea Control category is viewed doctrinally as a key enabler of all sea-based strike operations and sealift. The core of the Sea Control category is the Navy attack submarine, which, among other capabilities, is designed to attack hostile submarines and surface ships. Sea Control includes surface combatants without cruise missile capabilities or those that are designed for ASW missions. Supporting naval forces or units assigned to a Combatant Commander but not dedicated to other force roles are assigned to this category.

(1F1D) Ground Combat

Expeditionary forces and closely related activities designed primarily for the defeat of opposing ground forces and for the establishment of control over land areas.

Ground Combat forces include most Army and Marine Corps Combatant Command–assigned units, along with those systems primarily designed or dedicated to the support of this force role. It includes all Marine Corps aircraft. These aircraft are doctrinally designed and justified to support Marine Corps ground forces. The category also includes the Air Force A-10 close air support aircraft, which was designed primarily for supporting ground combat. In addition, the category includes all Navy amphibious ships. These ships are dedicated to Marine Corps ground forces and represent a supporting force to Marine Corps ground elements. The ground combat role is both an enabler and an offensive category. A division between offensive and defensive capabilities is not a useful distinction within the taxonomy.

(1F1E) Mobility

Expeditionary forces and resources designed to support the deployment of expeditionary forces.

The Mobility category represents the enabling force role that supports the transportation of other expeditionary forces. Many expeditionary forces are self-deploying or possess dedicated organic transportation assets. The Mobility category represents assets that are available to provide common-user transportation (i.e., available to more than one Military Service), including airlift, sealift, aerial refueling, aeromedical evacuation, port terminal operations, and road and rail surface movements. The Mobility category also includes programs for the pre-positioning of equipment and material.

Mobility forces are unique within the Forces category in that significant portions of their costs are aligned with transportation customers through a working capital fund. Working capital funds allocate costs for specific defense products or services to customer Program Elements. These arrangements are more typically used to allocate the cost of Infrastructure activities to customer accounts (discussed in more detail in Chapter V). Mobility forces support defense customers in both Forces and Infrastructure activities. These customers are, for example, troops requiring military transportation to training exercises. This distribution of mobility costs to customers has the effect of understating the cost of mobility forces in F&IC-based displays.

(1F2) Homeland Defense

Operating forces designed primarily to deter or defeat direct attacks on the United States and its territories and agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense.

Homeland Defense forces are the activities and forces that seek to shield U.S. territory and its population from attacks and intrusions. They serve to deter or defeat direct attacks on U.S. territory in all its forms. During the Cold War, this operational domain was dominated by nuclear warfighting forces, so, not surprisingly, the domain contains nuclear deterrence and continental air defense forces. These remain important force roles. However, in the decade since the Cold War, even before the attacks on September 11, 2001, there has been a renewed interest and broadened definition of homeland defense issues. In addition to counterterrorism, Homeland Defense expanded with DoD's commitment to aid the interdiction of drug shipments to the United States and guard against computer attack on the national information infrastructure. One important adjunct to the deterrence of nuclear attack has been initiatives aimed at nuclear threat-reduction, bio-terrorism defense, and arms control. These senior-level policy initiatives seek to reduce nuclear weapons, diminish the risks of proliferation from weapons of mass destruction, and enforce technological security. In addition, Homeland Defense includes the resources for senior-level policy initiatives seeking to influence global strategic issues through international contacts. These initiatives, where they have been identified in separate Program Elements, are contained in this category.

Homeland Defense is divided into three categories: (1) Deterrence, (2) Protection, and (3) International Engagement & Threat Reduction. They recognize the continuing role played by offensive nuclear forces in the deterrence of nuclear attack, the emerging role of national missile defense, along with the expanded concept of protecting U.S territory against varied threats. They also capture the senior-level initiatives for arms control and threat reduction both by counter-proliferation and expanded international contacts.

(1F2A) Deterrence

Homeland defense forces with the primary mission of deterring attacks on the United States and its territories by means of retaliation against an attacker.

The Deterrence category contains all offensive nuclear forces or weapons such as the Air Force and Navy intercontinental ballistic missile programs and their dedicated

supporting activities. The category also includes weapons exclusively used in nuclear warfighting, such as the Air Launched Cruise Missile (ALCM) and the Advanced Cruise Missile (ACM).

(1F2B) Protection

Homeland defense forces or activities with the primary mission of defeating attacks or intrusions on the United States and its territories.

This category captures the expanded concepts of territorial defense that have emerged since the end of the Cold War, along with national missile defense initiatives. It includes programs to protect against illegal drug activities and domestic activities to counter terrorism, along with the more conventional force roles associated with air defense. The common factor within this category is the assertion of control over U.S. territory against incursions and direct attacks of all types. Generalized support for Homeland Defense activities that cannot be associated with other categories within the domain are assigned here. Specific activities for protecting forces or installations in other categories against terrorist attack are assigned to those categories.

(1F2C) International Engagement & Threat Reduction

Arms control and threat-reduction activities under the supervision of the Office of the Secretary of Defense.

The International Engagement & Threat Reduction category recognizes senior-level policy initiatives, which serve to implement national strategy, as an important DoD activity. These initiatives can have operational consequences that alter the balance of military forces, shape the international environment, or diminish direct risks to the U.S. homeland. These risk-reduction activities include support for countering proliferation of weapons and nuclear material and for controlling export of U.S. technology. The category includes broad activities that seek to mold and shape the international environment towards U.S. interests. It also captures foreign military sales activities that can buttress allied capabilities for a more favorable balance of forces.

(1F3) Military Space Forces

Operating forces deployed in space and their associated supporting elements.

Military Space Forces are explicitly assigned to the Space Combatant Commander. Other space activities are distributed as appropriate. The category recognizes space as a unique theater of military operations that also supports other operational activities. According to DoDD 3100.10, "Space is a medium like the land, sea, and air within which military activities will be conducted to achieve U.S. national security objectives."[19] Space forces play supporting roles as communications links between expeditionary forces and their higher headquarters. They also play crucial roles in surveillance against ballistic missile attacks on U.S. territory and against theater forces. The category as a whole seeks to gather military space assets into a single category and recognize them as a specific operational domain with unique requirements for deployment and operation.

Military Space Forces comprises four categories that capture the unique requirements of deploying forces into space, the emerging realities of space control, the enhancement role these forces play in supporting other operating forces, and the potential for space-based combat. The four categories are (1) Space Force Launch, (2) Space Control, (3) Force Enhancement, and (4) Space Combat.

(1F3A) Space Force Launch

Space vehicles and supporting facilities that deploy space force systems.

Space Force Launch includes launch vehicles that deploy space forces into orbit. It also includes the specialized supporting organizations, facilities, and range operations necessary for space launch. Program Elements assigned to this category include the Evolved Expendable Launch System (EELV), specified expenses for Space Shuttle operations, and the Eastern and Western Space Launch Facilities.

---

19 DoDD 3100.10, "Space Policy," July 9, 1999, p. 2.

(1F3B) Space Control

Space forces and supporting elements designed primarily for the surveillance or defeat of enemy space activities.

Space control is ensuring the use of space by friendly forces while recognizing the potential requirement for denying its use to opponents. It is an enabling force role. Space Control forces become necessary when the friendly use of space is put at risk by hostile capability or when hostile use of space requires opposing action. While this is a doctrinally well-developed force role, and research into space-control weapons has been undertaken, there are no weapons systems developed for this category. Space Control forces consist at this time of space surveillance resources that monitor the use of space by allies and strategic competitors.

(1F3C) Force Enhancement

Space forces and supporting elements designed primarily to provide support to expeditionary and homeland defense forces.

Force Enhancement constitutes the bulk of Military Space Force resources. It includes all orbiting platforms that provide communications, surveillance, weather information, and other support to either Expeditionary or Homeland Defense Forces or their command elements. The category also includes the terrestrial control segments that direct these orbital forces.

(1F3D) Space Combat

Space forces and supporting elements designed primarily to conduct combat operations using space-based weapons.

The Space Combat category represents the doctrinal possibility of space-based weapons capable of engaging terrestrial targets. These differ from weapons that might be primarily designed for space control. The Space Combat category currently contains no assigned Program Elements.

(1X) Command & Intelligence

Programs that provide effective direction and control of combatant military operations. These programs include dedicated operational headquarters, associated command and control systems, and intelligence collection and exploitation.

Senior-level command is a distinct warfighting function with a close relationship to intelligence. With increasing seniority, the functions of command diverge from any single force role and begin to orchestrate multiple capabilities. Associated with these requirements are increasingly unique communications and information requirements. Similarly, the functions of intelligence in support of senior-level decision makers take on unique characteristics. Often, intelligence support at this level requires independent operations in the search for information. These characteristics of senior-level command and its supporting intelligence requirements are captured in a separate display within the Forces taxonomy.

Command & Intelligence is divided into two categories: (1) Operational Command and (2) Intelligence Operations. Operational Command includes Combatant Command headquarters and their directly subordinate service-component headquarters. Within Operational Command are the specialized command and control systems by which operational commanders employ their forces. The second category, Intelligence Operations, includes the National Foreign Intelligence Program (NFIP), the Joint Military Intelligence Program (JMIP), and intelligence-related activities, except for selected PEs from the NFIP and JMIP containing infrastructure-type activities. Figure IV-3 shows three tiers of the Command & Intelligence taxonomy and its associated category codes.

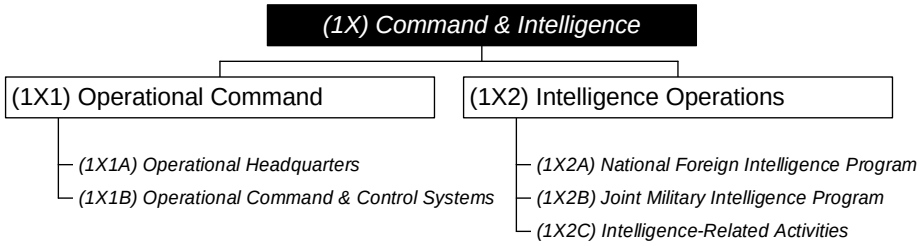

Figure IV-3. Command & Intelligence Categories and Codes

(1X1) Operational Command

Combatant Command headquarters and component headquarters (as defined in DoDD 5100.73) primarily responsible for directing and controlling the employment of global or theater-level U.S. military forces along with the technical means for exercising operational control.

Command is a distinct organizational function that exists within all military units. It is the organizing function that synthesizes unit-assigned personnel and material into an effective whole. In military organizations, each unit is organized within a hierarchy. As the functions of command are exercised at increasingly senior levels, command transitions from the direct management of personnel and material to the management and direction of subordinate units. The command function is exercised throughout the forces assigned to the Operating Forces taxonomy. However, with increasing seniority, the functions of command diverge from any single force role and begin to orchestrate multiple operational capabilities.

An essential requirement of operational command is communications with assigned forces. This requirement places unique demands on communications and information technologies. Frequently, military units are created to operate and sustain these technologies. Command and control systems are dedicated organizations and equipment that maintain the connectivity of commanders with their assigned forces for the direction of operational activities. Command and control systems are frequently dedicated communications links distinct from communications requirements for logistical or administrative support.

Operational Command comprises the two categories of (1) Operational Headquarters and (2) Operational Command & Control Systems.

(1X1A) Operational Headquarters

Combatant Command headquarters and component headquarters responsible for the exercise of operational control over the employment of U.S. military forces.

This category consists of Combatant Command headquarters and their component headquarters that exercise operational control over the employment of U.S. military forces. This category contains Combatant Command headquarters and staff, sub-unified

commands, and service component headquarters. Combatant Commanders exercise their control over assigned forces through component headquarters. These component headquarters may sometimes overlap or be embedded within major commands of the Military Departments. Within these commingled headquarters exists a range of staff functions, some of which are inherently operational while others exercise inherent support functions of the Military Departments. Service operational headquarters assigned to this category are intended to contain operational functions that serve to exercise command functions for military operations. Program Elements that contain a predominance of operational functions are assigned to this category.

(1X1B) Operational Command & Control Systems

The dedicated facilities, equipment, communications, and personnel for the support of operational headquarters in their exercise of operational control over the employment of U.S. military forces.

Operational Command often requires specialized communications technology that allows direction and control over assigned forces. These specialized communications applications or organizations maintain connectivity between operational commanders and their forces. Operational Command & Control Systems are distinguished here from other sets of communication requirements such as those that enable logistics and administrative support between Military Departments and their supported operating forces. Operational Command & Control Systems equipment and activities are typically dedicated or specialized communications assets optimized for the exercise of operational control. They are most typically associated with mid- to senior-level headquarters. General field communications systems extending to tactical headquarters are assigned within the appropriate category of the operating forces. General or bulk communications links that command and control systems use to maintain their connectivity are not viewed as part of the system and are therefore not included in this category.

(1X2) Intelligence Operations

Specified operational resources of the National Foreign Intelligence Program, the Joint Military Intelligence Program, and other related activities.

Intelligence Operations consists of three categories: (1) National Foreign Intelligence Program (NFIP), (2) Joint Military Intelligence Program (JMIP), and

(3) Intelligence-Related Activities. The NFIP and JMIP represent important categories for senior decision-makers. These categories are managed differently than other functional areas. With modest exceptions, they are grouped to correspond to categories in other budget-related documents.[20] The NFIP and JMIP represent the senior levels of the intelligence community within the F&IC. The Intelligence Operations category recognizes the set of independent activities undertaken by senior-level intelligence agencies that operate apart from those intelligence resources dedicated to the Operating Forces.

(1X2A) National Foreign Intelligence Program

Specified operational resources of the National Foreign Intelligence Program as defined by Executive Order.

The National Foreign Intelligence Program (NFIP) is defined in U.S. Code as, "all programs, projects, and activities of the intelligence community, as well as any other programs of the intelligence community designated jointly by the Director of Central Intelligence and the head of a United States department or agency or by the President." The definition goes on to distinguish NFIP programs from other intelligence activities within the operating forces by specifying that that they do "not include programs, projects, or activities of the military departments to acquire intelligence solely for the planning and conduct of tactical military operations by United States Armed Forces."[21] Program Elements assigned to the NFIP are designated within the Future Years Defense Program (FYDP). NFIP-designated Program Elements are assigned to this category with the exception of NFIP management headquarters, skill training, and installation support.

(1X2B) Joint Military Intelligence Program

Specified operational resources of the Joint Military Intelligence Program.

The Joint Military Intelligence Program (JMIP) is a centrally managed intelligence program of the Department of Defense. It provides resources for Defense-wide intelligence initiatives and activities providing support to multiple DoD customers.

---

20 Intelligence infrastructure programs are assigned to Infrastructure categories.

21 Title 50 USC, Section 401a (6).

JMIP Program Elements are designated by appropriate program managers. JMIP includes the following programs:

- Defense Cryptologic Program (DCP),
- Defense General Intelligence and Applications Program (DGIAP)
- Defense Imagery and Mapping Program (DIMAP), and
- Defense Joint Counterintelligence Program (DJCIP) [22]

(1X2C) Intelligence-Related Activities

Operational intelligence activities not associated with the operating forces, the National Foreign Intelligence Program or the Joint Military Intelligence Program.

Intelligence-Related Activities include other means for intelligence operations not associated with the operating forces, nor assigned to the National Foreign Intelligence Program or the Joint Military Intelligence Program. Typically these resources are dedicated to senior-level headquarters and operate independently from tactical units.

Intelligence-Related Activities, together with the Joint Military Intelligence Program and the National Foreign Intelligence Program constitute the Intelligence Operations category within the F&IC taxonomy.

(1Z) Forces Resource Adjustments

Programs that record centralized resource adjustments that were not allocated to the programs affected, e.g., Foreign Currency Fluctuation, Commissary Resale Stocks, and Force Structure deviations.

If they cannot be allocated to other Forces categories, technical adjustments to Forces resources are assigned to this category.

---

22 See DoDD 5205.9, "Joint Military Intelligence Program," April 7, 1995.

V. INFRASTRUCTURE CONCEPTS

DoD infrastructure activities create and sustain the forces Combatant Commanders use to fight wars. These activities are maintained and operated by the Military Departments and Defense Agencies to administer and support the combatant forces. Each Military Department is assigned responsibility for a set of specific support activities under Title 10 U.S. Code and the Goldwater-Nichols Act of 1986 (see Appendix A). In general terms, the law requires the Military Departments to provide the material, manpower, and organization needed to create and sustain effective military units. Briefly, these infrastructure activities involve:

- Equipping new generations of military forces with modern weapons,
- Recruiting and training personnel to use them to fight effectively,
- Forming new units or upgrading existing units at assigned home stations, and
- Sustaining all aspects of new and existing forces.

Infrastructure consists of organizations established and sustained by the Military Departments to fulfill their statutory responsibility to man, train, and equip the forces. These organizations provide ongoing, continuous, and routine support for the Forces as they await use by the Combatant Commanders. While this is the general arrangement displayed within the Force & Infrastructure Categories, it is important to remember that the Military Departments and Defense Agencies continue to support the forces after the Combatant Commanders employ them. This wartime mission of the infrastructure sustains the operational forces as their component resources are consumed and exhausted. The continuous renewal of the forces through the shipment of spare parts, the rotation of personnel, or the transportation of consumable supplies is a critical part of effective warfighting sometimes overlooked in Department of Defense analyses.

The wartime sustainment of the forces compounds the difficult problem of correctly sizing the infrastructure relative to forces. Some of these issues will be touched on in subsequent sections. But if one of the principles of this taxonomy is to promote a balanced view of the infrastructure, two important points must be made by way of introduction:

1. Infrastructure contains activities necessary to the creation and sustainment of forces during peace, war, and operations other than war, and

2. The most efficient size and composition of infrastructure are difficult to ascertain because optimal support capability levels are much different during peace, war, and operations other than war.

With these points in mind, the features of the Infrastructure display can be introduced and its underlying concepts explained.

A. WHAT IS INFRASTRUCTURE?

Fundamentally, infrastructure is defined as those specialized organizations within the Military Departments and Defense Agencies designed to organize, man, train, equip and support Forces assigned to the Combatant Commands. The functions of these specialized organizations were codified in the Goldwater-Nichols legislation and are specified in U.S. Code (see Appendix A). Organizations of this type are retained by the Military Departments and are not assigned to Combatant Commands. As a result, the distinction between forces and infrastructure is now fundamental to the organization of the Military Departments.

Establishing specialized support organizations is a common feature in the design of complex organizations. Arrangements of this type can create economies of scale that reduce costs and deliver standardized products. By creating specialized infrastructure activities, the DoD can remove duplication of these activities from Forces units, which further orients their organizational design toward operational roles. This approach emphasizes organizational structures designed for combat and focused on operational readiness. An example of this approach is the centralized development of equipment, centralized recruiting, or operation of a wholesale supply system operating apart from the forces. In this light, the term “infrastructure” becomes a shorthand way to refer to these common support functions that have been organized apart from the operational forces. The effectiveness and efficiency of infrastructure, and its size relative to forces should always be subject to examination.

While the centralized support functions exist primarily to support operational units, they support infrastructure organizations as well. The process of specialization that benefits the forces also benefits infrastructure activities. Centralized recruiting, basic training, hospitals, acquisition management, or long-haul communications are centralized infrastructure functions that provide support not only to the forces, but also to other infrastructure organizations. This is an important factor in the design of Infrastructure categories and in the display of Infrastructure costs—it is integral to the discussion of Infrastructure concepts in this section. Despite the added complexity of supporting other

infrastructure organizations, infrastructure fundamentally derives its justification from its relationship with the forces.

B. RELATIONSHIP OF INFRASTRUCTURE TO FORCES

The cost of infrastructure is a component of the total cost of forces. Establishing the general relationship of infrastructure to forces is important to creating a consistent display of infrastructure manpower, organizations, and dollars. If combatant-assigned forces are viewed as organizations composed of material and personnel, then infrastructure can be viewed as activities to develop, procure, and supply forces material, along with those activities that recruit, qualify, and assign forces personnel. In this example, material and personnel are the fundamental resources out of which forces organizations are created. They are the building blocks of forces units and are, as such, output of the infrastructure. In this sense, infrastructure represents the process or mechanism of creating the output or products. Seeking to distinguish the output of the infrastructure from its mechanisms is a useful standard in establishing a consistent display of Infrastructure resources. The most precise and consistent force and infrastructure displays will be produced from Program Elements that correspond to this concept. Relative to this standard, the various mechanisms for assigning costs to Program Elements within the Future Years Defense Program is addressed later in this section.

C. RELATIONSHIPS AMONG INFRASTRUCTURE CATEGORIES

Infrastructure categories themselves interact in certain ways as they create or sustain the forces. For example, the process of providing technically advanced equipment to the forces is an interactive process of the Acquisition Infrastructure category in cooperation with the Science & Technology Program category. Science and technology can be thought of as a knowledge base from which weapon system development precedes towards its procurement. In addition, organizations within both these categories respond to guidance from their senior management contained within the Departmental Management category. The interactions of the three categories ultimately combine to deliver a product to the forces.

Infrastructure categories interact in another way when they supply material and services to other infrastructure activities as well as to forces. The Defense Health Program, for example, represents health care for the uniformed services whether they are assigned to Forces or Infrastructure. Central Training, likewise, provides training to military and civilian students assigned to both Forces and Infrastructure activities.

Understanding the interactions between Infrastructure categories, and how these interactions are represented within the FYDP, is important to understanding Infrastructure categories and the display of their associated resources.

D. WHAT AN INFRASTRUCTURE CATEGORY REPRESENTS

An Infrastructure category is designed to represent a broad collection of related activities needed to create or sustain the forces. Each category is structured to display the full set of resources necessary to produce its product or service. Functional categories such as Installation Support and Headquarters & Other Administrative Activities associated with the supported Infrastructure category are included with that category. A category usually contains activities from each of the Military Departments and from a Defense Agency. In the case of a specific Military Department, these activities often belong to a single major command or direct reporting unit within that department.

The Central Logistics category, for example, can be expected to contain many resources from the Air Force Material Command, an Air Force major command that, among its other functions, operates depot-maintenance activities in support of the forces. In keeping with the objective of displaying the full set of resources needed to produce a product or service, the Central Logistics category also contains the Military Service's management headquarters associated with wholesale logistics support to the forces. The category also includes the installation support, base operating support, and base communications Program Elements associated with Central Logistics support to the Forces. These latter functions, referred to here as common functions, are included with most Infrastructure categories and are addressed in the following section.

E. FUNCTIONS COMMON TO MULTIPLE CATEGORIES

Each Infrastructure category is structured to capture the full set of resources associated with supplying its products or services to the forces. If infrastructure consists of a series of activities providing support to the forces, then Infrastructure itself requires many of the same types of support. Like forces, it needs supplies, trained people, facilities, and policy makers. Where PEs of this type support specific Infrastructure elements, they are assigned to that category. Examples are Headquarters & Other Administrative Activities (HOAA) and Installation Support, which are shown separately within Infrastructure categories wherever possible. Installation Support is further divided into (1) Base Operating Support, (2) Base Communications, (3) Facilities Support, and (4) Environmental Programs. These categories, described in the following subsections,

represent activities found in most of the major Infrastructure categories and, in each case, their efforts are dedicated to producing that category's specific product or service.

Another way to organize these common functions would be to assign all Base Operating Support (BOS) PEs in the department to a single BOS category, all Base Communication PEs to a single Base Communications category, and so on. This purely functional arrangement would present the total cost of a given function in a single, unifying category. We did not do that because we believe the cost of these common functions should be included in the cost of each Infrastructure category's output goods or services. These resources are dedicated to the production of that category's unique set of output and their cost should be included in the cost of producing it. This approach, used throughout the F&IC taxonomy, is consistent with the themes of Activity-Based Costing.

Nevertheless, special analyses of these crosscutting activities remain an important requirement. The F&IC coding structure enables analysts to quickly retrieve resources for these common functions. HOAA and Installation Support are categories in nine of the twelve major Infrastructure categories. When present, they always occupy the first and second positions in the coding structure. For example, the codes for HOAA and Installation Support under Communications & Information Infrastructure (2C) are coded 2C1 and 2C2. The same categories under Defense Health Program (2M) are 2M1 and 2M2. See Appendixes B and C for details. Exceptions to this coding convention exist within the Science & Technology Program category, and coding structures in some categories may omit one or both common categories. See Appendixes B and C for details.

1. Headquarters & Other Administrative Activities

Management and administration activities are present in most infrastructure categories. Typically this category contains management headquarters activities that provide policy and direction to the production activities producing a category's output. The HOAA category can also include generalized cost-reduction initiatives, modernization, research, or studies relevant to the overall Infrastructure category. *Management headquarters* is a specific term defined in DoD Directive 5100.73, "Major Department of Defense Headquarters Activities," May 13, 1999.

2. Installation Support

Base Operations, Base Communications, Facilities Support, and Environmental Programs make up the Installation Support category.

a. Base Operations

Base operations are the common set of services and organizations necessary to house and sustain hosted units and organizations. The category includes base/post/station security, its administration, retail supply operations, visual information activities, maintenance of installation equipment, and varying levels of support to morale, welfare, and recreation activities. Housing for bachelor military members is included in this category.[23] These functions are distinguished from those that sustain, repair, and modernize the installation facilities.

b. Base Communications

Base communications activities provide communications services to installations and connect them with commercial and military long-haul communications networks. This category also includes intra-base/post/camp radio.

c. Facilities Support

Facilities support activities sustain, restore, and modernize installation facilities. It includes real property services, maintenance and repair, minor construction, and facilities disposal.

d. Environmental Programs

Environmental programs protect or restore the environment on installations. This includes pollution prevention, environmental conservation, environmental compliance, restoration, and research.

F. DISPLAY OF INFRASTRUCTURE COSTS WITHIN THE FYDP

There are three general ways in which infrastructure costs are shown in the FYDP. They range from showing all of the costs in Forces to showing all of the costs in Infrastructure. Knowing how those costs are distributed within the Future Years Defense Program is important to understanding cost displays that use the F&IC taxonomy. We introduced this general topic in Chapter III with respect to the full cost of Forces. In this section, we address this same topic from the perspective of Infrastructure (i.e., some or all of the costs of its products are either distributed to Forces or contained in centralized

---

[23] Bachelor Housing is a subelement of the housing component within Regular Military Compensation (RMC). Additional discussion of this important component of total military personnel compensation is included within the discussion of Personnel Support Infrastructure.

Infrastructure-assigned PEs). This section discusses Infrastructure cost displays against a model of Infrastructure as a production mechanism, and Forces as the product of that mechanism. Infrastructure cost displays are evaluated to the degree that product costs are associated with Forces and the costs of their production mechanisms are associated with a specific Infrastructure category.

Recall from Chapter II that displaying the full cost of forces is an important goal for senior decision-makers, as is visibility into the costs of certain parts of its supporting infrastructure. These conflicting objectives underpin the three case examples outlined below. Each case has specific effects on F&IC Infrastructure cost displays.

- *Case A: The Cost of the Mechanism and the Product are in Forces.* The Central Logistics category provides most commonly needed supplies to customers DoD-wide, charging the customer a rate that includes both the cost of the supply item and the cost of the infrastructure activity necessary to stock and deliver it. The Defense Working Capital Fund (DWCF) enables managers to charge customers for both the cost of the product and the cost of the Infrastructure mechanism.[24]
- *Case B: The Cost of the Mechanism is in Infrastructure; the Cost of the Product is in Forces.* Acquisition Infrastructure oversees the development and procurement of equipment such as tanks, aircraft, and ships. This activity focuses on the program offices, which are viewed as the mechanisms that produce the equipment, and the equipment, in turn, is viewed as a product of

[24] Conceptually, the DWCF generates a significant flow of funds between the forces and the infrastructure, and within the infrastructure itself. It establishes a customer-supplier relationship between organizations. Where implemented, the DWCF system provides supplies and material to force and infrastructure customers (users) at prices that recover their full cost, including overhead costs. The DWCF is a means for more fully aligning the costs of equipment operations and general supplies with the supported activity. In short, it makes each customer account (e.g., an aircraft carrier) responsible for paying for the cost of the goods and services needed for its operations. Included in this cost is typically an increment of depreciation costs that serves to re-capitalize the support activity. Within Infrastructure, many Central Logistics activities, for example, are financed by DWCF. Specifically, a common service of the DWCF is to sell reparable parts to Forces-assigned organizations possessing aircraft, ships, or vehicles. The sale of reparable parts illustrates the effect of the DWCF on the Force & Infrastructure Categories display. Those effects will be similar for the sale of other products and services provided by the DWCF. With respect to reparable spares needed for maintaining force equipment, the money to buy these parts has been allocated to the customers and most of the funds can be found in the forces Program Elements. As the forces requisition the parts from the supply system, resources flow from the forces to the infrastructure to finance the repair and reissue of these parts. Parts are exchanged for appropriated funds. Included within the price that is charged for these parts are the direct costs of the part along with an increment to cover overhead costs and to re-capitalize the DWCFs for depreciation on capital equipment. With respect to overhead, this includes the cost of DWCF administration, management, and common services. With respect to re-capitalization, the cost increment is used to fund necessary investments in DWCF plant and equipment.

Acquisition Infrastructure. The funds necessary to buy the equipment, however, are included in Program Elements assigned to Forces categories.

- *Case C: The Cost of the Mechanism and the Product are both in Infrastructure.* Whether assigned to force units or infrastructure activities, all service members are entitled to comprehensive medical care. The cost of their care is part of the full cost of a marine, a sailor, a soldier, or an airman. Health care of service members is a responsibility of the Military Departments. The mechanism for delivering this care is through the Defense Health Program (DHP), a large and significant budget category contained in a specified set of Program Elements. On a day-to-day basis, the DHP provides medical care to service members, their families, and the retired military community. The cost of that care, generated by the DHP, is difficult to separate from the cost of DHP doctors or hospitals. As such, the full set of DHP Program Elements, containing the costs of both its products and its mechanisms, are assigned to Infrastructure categories.

A complete discussion of the merits for each of these cases is outside the scope of this report. The basis for choice between the three cost cases within the FYDP reside in the complex needs for DoD decisionmaking and oversight. However, we offer the following as a summary of the topic:

- Choose Case A when you are concerned with the full cost of specific force elements.[25] Case A is particularly desirable when decisions must be made on the quantity, mix, and benefits of the force structure. The defense planning, programming, and budgeting paradigm is based on knowing the full cost of defense output. Knowing the full cost and benefits for each of these force elements helps senior leaders judge their worth. This is also true when considering the full cost of intermediate output, such as the case of an infrastructure activity supporting another infrastructure activity. When Case A is used, the cost of the support is properly aligned with the consuming infrastructure activity. For example, supply costs associated with flying training are aligned to the Central Training category under Case A. Most supply and maintenance costs within the Central Logistics portion of the Material Support group are handled as Case A costs. Thus, Infrastructure category displays based on Case A display more of the cost of infrastructure in Forces than either Case B or Case C does.
- Choose Case B when you want to focus directly on the funds attributed to a large procurement project, such as buying a ship or a fleet of aircraft, and

---

25 *Statement of Federal Financial Accounting Standards No. 4: Managerial Cost Accounting Standards* (July 31, 1995, p. 318) states in part: "Reporting entities should report the full costs of outputs in general purpose financial reports." See footnote 10 in Chapter II for full quotation.

manage the infrastructure costs for that project separately. In the absence of a DWCF-type funding arrangement for major procurement products, separate Program Elements for products and the associated infrastructure "mechanism" often exist. In this way, a program office, for example, can be distinguished from its associated major defense acquisition program. Case B allows for PEs containing the product cost to be assigned to Forces and the PEs containing the mechanism cost to be assigned to Infrastructure. This is consistent with the F&IC conceptual model, which views Forces as a direct cost of the DoD mission and Infrastructure as its indirect costs. Case B typically displays infrastructure activity costs such as personnel and facilities in PEs assigned to Infrastructure. Most acquisition programs within the Material Support Infrastructure group are handled as Case B costs. To summarize this case, Infrastructure displays based on Case B display less of the cost of infrastructure in Forces than Case A does and more in Forces than Case C does.

- Choose Case C when you are concerned with the full cost of specific infrastructure categories. In Case C, infrastructure programs pay all costs for all customers. But because customers are getting "free goods," managing to fulfill only the real need for those goods is more difficult. However, Case C is currently in use in the FYDP wherever costs are difficult to align with consuming activities. Most Personnel Support Infrastructure group costs are handled as Case C costs. To summarize, Infrastructure category displays based on Case C display all infrastructure costs within Infrastructure.

No single concept is applied evenly throughout the defense infrastructure, and, as a result, the cost content of Infrastructure displays is inconsistent across categories. Therefore, it is important to remember how infrastructure costs are handled within the FYDP and to be aware of the resulting effects if comparisons among the categories become important.

G. DISPLAY OF INFRASTRUCTURE MANPOWER RESOURCES

The previous section describes three separate ways that some or all of an Infrastructure category's costs or dollar resources may appear in F&IC-based displays. The three cases follow from the cost-allocation policies within the DoD and the way these costs are shown in the FYDP and in the PEs. These varied cost allocations should be distinguished from the display of other resources associated with PEs, particularly manpower resources.

The FYDP and its PEs are organizationally based, as are the Force & Infrastructure Categories. Manpower is obviously an essential component of

organizations. Manpower resources associated with a given PE are displayed consistent with their PE assignment. Unlike costs, an F&IC-based display of Infrastructure manpower resources shows its actual allocations between the various categories. For example, civilian manpower associated with PEs in the Central Logistics category are contained within Central Logistics displays, even though the associated labor costs for this manpower are associated with customer PEs. For infrastructure activities, the costs of manpower, along with the other costs of infrastructure products, are sometimes with the forces they support, sometimes wholly within the infrastructure, and sometimes split between the two, as described in cases A through C in the previous section.

Despite these variances in the display of manpower costs, the actual manpower is displayed with its appropriate Infrastructure category. Given the variances in cost allocations, manpower can sometimes be a more reliable indicator of the size of the various activities of the Military Departments and Defense Agencies.

H. EVALUATING THE SIZE OF INFRASTRUCTURE

The relationship between forces and infrastructure is often misunderstood. It is a relationship that is intimate, ubiquitous, and complex. On a day-to-day basis, forces and some types of infrastructure operate side-by-side, such as combat units at their host installation. Alternately, forces may not derive benefits from specific infrastructure activities for many years, as is the case with the Science and Technology Program. Given these complexities, Infrastructure activities are occasionally characterized as inherently wasteful costs that make little or no contribution to warfighting. This extreme view of infrastructure may be supported anecdotally in individual cases, but it is not valid overall. In addition to the cost accounting difficulties outlined previously, the following three general problems can distort the assessment of infrastructure:

1. Activities seem to have excess assets because they are sized for war and appear to be under-used during peace.
2. Activities are organized separately from combat units they support and are seen as having a less important role.
3. Activities support warfighting in a very indirect way.

1. Wartime versus Peacetime Activity

The sizing of infrastructure activities can be difficult because each activity must be big enough to handle the most demanding wartime scenario established for the forces it supports. This means that the activity may have too little to do during peacetime and

thus appear oversized. One example might be sizing some medical activities to anticipated wartime casualty levels. Under these circumstances, the capability may appear oversized to peacetime requirements.

2. Separate Organization

Many activities needed to support operational units are routinely organized separately from units they support. This may be because they support many organizations, because proximity to the operational unit is not required, or both. As outlined at the beginning of this section, the creation of separate organizations to undertake specific infrastructure-type functions is a common feature of contemporary defense organization. This arrangement may make it seem these organizations are less important and allow their long-term supporting relationship with the forces to be overlooked. For example, heavy maintenance activities within depots, organized to gain economies of scale and to serve multiple customers, can be difficult to assess as to their capacity. Yet they can be the underlying factor in the readiness of equipment assigned to warfighting units. Likewise infrastructure programs can be central to the quality of life of Military Service members.

3. Indirect Support Activities

Some infrastructure activities support the forces over the long-term rather than short-term. They are oriented towards future rather than the current forces. The Science & Technology Program and Acquisition Infrastructure activities (including associated Operational Test and Evaluation) support future warfighting. In addition, the DoD is sometimes asked to conduct activities that do not directly support operational units and may only indirectly support the department at all. For example, while combat units do not directly need pollution-prevention programs, such programs are needed for DoD to do its part in reaching a national goal.

There can be legitimate disagreements as to the appropriate size of each infrastructure activity relative to the needs of the present and the anticipated warfighting force. These are ultimately matters for prudent judgment by the senior leadership of the Department of Defense. Mistakenly closing or downsizing a support activity relied on by DoD forces can degrade the performance of warfighting units either immediately or gradually over time, depending on the nature of support. For example, closing a fuel re-supply activity could cause immediate problems, whereas closing a major acquisition office may not cause apparent problems for some time. Even if there is doubt about the

appropriateness of specific infrastructure activities, there is, nevertheless, a clear need for infrastructure to support the forces. When the actual nature of infrastructure is fully understood, its appropriate size and functionality becomes clearer.

VI. INFRASTRUCTURE CATEGORIES

A. INFRASTRUCTURE DISPLAY OVERVIEW

The Infrastructure category is made up of twelve categories, which can be divided into five groups. They are as follows:

- Organizational Support
- Material Support
- Personnel Support
- Departmental Policy & Administration
- Other Infrastructure

The first four groups are oriented to delivering specific sets of goods and services to the forces. The Infrastructure display also includes a fifth, minor group of Other Infrastructure, but, as will be discussed, the fundamental orientation of the F&IC display is on the first four groups. The categories in these five groups address a broad range of activities and services that are introduced in the following subsections. Figure VI-1 shows where among the five groups the twelve defined Infrastructure categories fall. It also shows their associated F&IC codes.

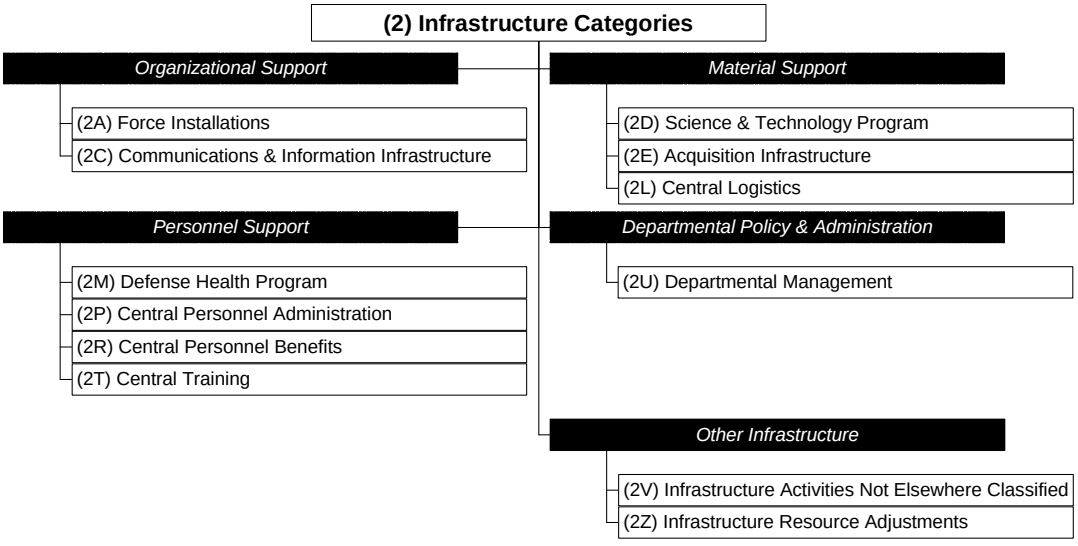

Figure VI-1. Overview of Infrastructure Categories and Codes

In all, the Infrastructure hierarchy contains approximately 150 categories at multiple levels of subdivision. To simplify the presentation of this material, this chapter describes and defines categories only down to the first level of subdivision within each major category. See Appendix C for a list of categories for the entire hierarchy.

1. Organizational Support

Organizational Support infrastructure activities support force organizations as a whole. They house each unit's resources at military bases, posts, camps, and homeports. They repair and maintain the piers, hangars, runways, and barracks on 250 major installations worldwide and integrate this dispersed complex with an array of information-processing resources and telecommunications capabilities. The group consists of two Infrastructure categories: (1) Force Installations and (2) Communications & Information Infrastructure. Force Installations consists only of installations directly supporting organizations assigned to the Forces category. Other installations are assigned to the Infrastructure category they support. Communications & Information Infrastructure specifically includes, among other activities, long-haul telecommunications and base and regional computing services, all of which support Infrastructure categories in addition to their support for the Forces.

2. Material Support

Material Support infrastructure activities acquire, store, and distribute the equipment and supplies needed to equip and sustain military units and organizations. These infrastructure activities research, develop, test, and field the equipage of military forces. They manage the development of new generations of equipment, support their full life cycle of maintenance, and manage their disposal. This diverse class of activities ranges from laboratories to warehouses, depots to test ranges. Material-related infrastructure activities manage a quarter of a million vehicles, more than one thousand ships and boats, and fifteen thousand aircraft in a logistical operation that dwarfs any Fortune 500 company.[26] This group consists of three categories: (1) Science & Technology Program, (2) Acquisition Infrastructure, and (3) Central Logistics.

---

[26] DefenseLINK, *DoD 101, Introduction to the United States Department of Defense, Big Business Are Us* [Online], 30 June 2000. Available: http://www.defenselink.mil/pubs/dod101/largest.html; accessed 10 October 2001.

3. Personnel Support

Personnel Support infrastructure activities recruit, educate, train, assign, re-assign, and maintain the health of DoD service members and civilians. They provide health care for retirees and dependents, run schools, and provide benefit programs for more than five million people. This group consists of four categories: (1) Defense Health Program, (2) Central Personnel Administration, (3) Central Personnel Benefits, and (4) Central Training.

4. Departmental Policy & Administration

Departmental Policy & Administration activities articulate requirements, allocate resources, and establish policy for the entire force-infrastructure complex. This group represents the senior headquarters of the Military Departments, the Office of the Secretary of Defense, the Joint Staff, and the department-wide administrative services that integrate forces and infrastructure into a cohesive whole. It contains the senior departmental and agency headquarters that oversee the three other groups of direct infrastructure. These policy and resource-allocating organizations seek to coordinate and integrate support to the warfighting forces. This group is represented by a single category: Departmental Management.

5. Other Infrastructure

This adjunct group of two categories was designed to hold Program Elements whose infrastructure assignment remains under review or where resource adjustments exist within the Future Years Defense Program. These two purposes are represented in two categories, (1) Infrastructure Activities Not Elsewhere Classified (IANEC) and (2) Infrastructure Resource Adjustments.

B. INFRASTRUCTURE CATEGORY DESCRIPTIONS

The accuracy of the F&IC display is closely linked with the accurate assignment of each PE to the appropriate category. Each PE is assigned to one and only one category. Said another way, no Program Element is split for assignment to multiple categories. For this reason, understanding the conceptual model behind the display is crucial to correct PE assignment. Correctly distinguishing between Forces and Infrastructure and, in turn, between their categories requires rules for discriminating between the PEs. The objective of the rules is to provide the most succinct basis for PE assignment without straining to cover every possible case.

These rules are expressed as a series of terse and precise definitions, recognizable by shadowed boxes, as shown below for the overall definition for the Infrastructure category.

(2) Infrastructure

Departmental or Agency-assigned activities that provide manpower, materiel, facilities, services, and information needed by units assigned to the Combatant Commands. Infrastructure is the means of producing and sustaining the force. Forces (and their sustainment) are products of the infrastructure.

Definitions seek to provide reasonably precise criteria for the assignment of resources contained within Program Elements of the Future Years Defense Program. Consistent assignment of PEs in harmony with the objectives of the display create accurate resource and cost information for senior decision-makers and their staffs. Appendix C contains a full set of definitions for the entire F&IC hierarchy. The remainder of this chapter defines the first three tiers of Infrastructure categories.

1. Organizational Support

Figure VI-2 shows the Force Installations and Communications & Information Infrastructure categories as part of the Organizational Support group. These categories provide services for military organizations as a whole. Unlike other categories, which provide services that mainly support the material or personnel components of units, Organizational Support infrastructure can be viewed as providing support to the overall unit or to the organization itself. The unit's equipment and personnel are, of course, vital to the performance of the organization. Large segments of the infrastructure, generally independent from one another, operate to maintain these resources' readiness for activity. Organizational Support infrastructure is somewhat different. It is more closely associated with the integrated activities of personnel and material that mark the desired output of military units. Support of this kind is an entitlement of the unit itself by virtue of its assignment to a physical location and position within an organizational hierarchy. This means that an administrative requirement for facilities and installation services is created whenever a unit is assigned or re-assigned to a physical location.

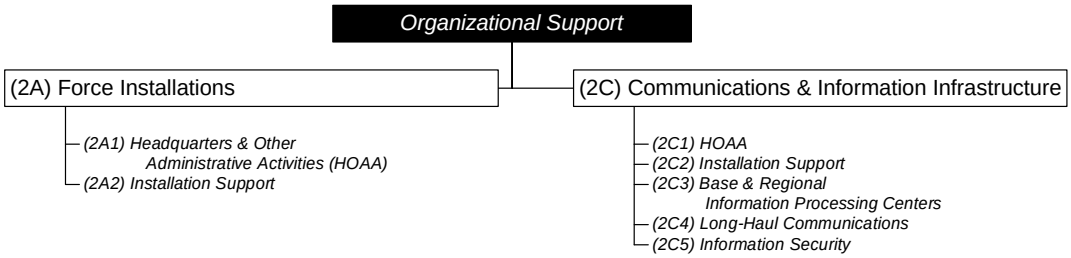

Figure VI-2. Organizational Support Categories and Codes

Likewise, when a unit is created or re-assigned, it is assigned superiors within an organizational hierarchy. It derives from this assignment a requirement for information connectivity to allow the hierarchy to operate in a coherent and synchronized manner. This requirement for local communications, facilities, and long-haul communications are contained within Organizational Support infrastructure.

The relationship between this group of support activities and the remainder of the infrastructure is often overlooked. These installation services are often the means to deliver the products of other Infrastructure categories directly to the supported units. The base's retail supply operations or its personnel support activities are obvious examples. These installation services can be expected to interact with wholesale supply activities of the Material Support infrastructure or the general administrative activities contained within the Personnel Support infrastructure, respectively. If, as previously addressed, Infrastructure consists of specialized organizations performing necessary activities external to their supported units, often it is the local installation that acts as a retail distributor of these products or services.

(2A) Force Installations

Installations at which units in the Forces category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

Force installations house and administer F&IC Forces-assigned units at their homeports, bases, stations, or installations. Examples include a naval station and its pier that serves as the homeport for a naval surface combatant; a naval air station that supports

naval aviation units assigned to the operating forces; the garrison command that supports an Army Division; and the Support Group for an Air Force Fighter Wing. A force installation's facilities and utilities support the day-to-day training and administrative activities of the assigned force units. As outlined in the previous discussion of Organizational Support infrastructure, forces and their supporting infrastructure are often in closest proximity on force installations, most often working side-by-side on a daily basis. Barracks and office buildings house unit personnel. Local training ranges enable unit training. Hangars, docks, piers, and garages support and shelter unit equipment.

The Force Installations category displays the resources directly associated with operating and maintaining installation facilities for Force-assigned units and providing them the necessary base operating support. In the Navy, a portion of these services is financed through a working capital fund. A portion of the costs for installation services is shown with Navy customers. These installation services include housing, food services, utilities, waste disposal, recreation, repair facilities, grounds and building maintenance, installation equipment maintenance, and administration and technical support. The scope and type of these activities at an installation spring from the needs of the assigned units. Equipment, personnel, training requirements, probable unit missions, and other related force requirements are responsible for the physical size and capabilities of an installation.

The Force Installation category consists of only two categories: Headquarters & Other Administrative Activities and Installation Support.

(2A1) Headquarters & Other Administrative Activities (HOAA)

Force installations management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

Unlike most other Infrastructure categories, Force Installations does not currently have programs assigned to the HOAA. Management oversight for force installations generally falls under staff elements in the Departmental Management category or with operational headquarters associated with forces.

(2A2) Installation Support

Installations at which units in the Forces category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2C) Communications & Information Infrastructure

Programs that provide secure information distribution, processing, storage, and display. The major elements include long-haul communications systems, base computing systems, Defense Enterprise Computing Centers and detachments, and information assurance programs. (Note: communication and computer activities dedicated to other Infrastructure categories are assigned to those categories.)

The need to communicate is a requirement of every activity within the Department of Defense. It is an inherent requirement for management control, for linking the supported units with their supporting activities, and to enable de-centralized operations and administration. For this reason, communications resources within the F&IC taxonomy are located with their supported activity wherever possible. On this basis, the Communications & Information Infrastructure category does not contain the full set of resources associated with the DoD communications and information program. Instead it contains the centralized programs that enable the department's distributed communications capabilities to operate coherently or operate as common resources available to DoD users. It also contains the specialized communications and information technology that links Infrastructure activities to their supported Forces. Infrastructure support remains a requirement during war and during operations other than war. These specialized Infrastructure support systems, such as the Global Combat Support System, should not be confused with systems assigned to the Forces category of Operational Command & Control Systems.

Given the inherent dispersion of the overall DoD effort, along with rapid growth of information technology, there have been several efforts to conceptually link the operational, logistical, and administrative requirements of the department. The requirement that all sectors of DoD improve their interoperability has forced the development of an integrated communications architecture. The F&IC taxonomy builds on these conceptual architectures.

A particularly important model implemented within the F&IC, is the conceptual division of the Defense Information Systems Network (DISN) into three segments. DISN is best known for its long-haul communications requirements. But the need for inter-operability requires that its links with other communications segments be defined. These other segments were identified as the operational forces and their supporting base. The DISN concept of the operational forces and the supporting base reasonably corresponds with the F&IC concepts of forces and infrastructure. The DISN architecture refers to operational forces as "deployed forces." Communications programs of the deployed forces are assigned as appropriate to a Forces category, and communications programs of the supporting base are assigned to the appropriate Infrastructure category. Long-haul communications, which links each of these segments and allows their inter-operability, is assigned to the Communications & Information Infrastructure category. Additional detail on the relationship between the various DISN segments is provided below in the description of Long-Haul Communications.

The Communications & Information Infrastructure category consists of five major categories: HOAA, Installation Support, Base & Regional Information Processing Centers, Long-Haul Communications, and Information Security.

(2C1) Headquarters & Other Administrative Activities (HOAA)

Communications and information management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2C2) Installation Support

Installations at which units in the Communications & Information Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2C3) Base & Regional Information Processing Centers

Non-tactical base computers and the Defense Enterprise Computing Centers and Detachments.

Base & Regional Information Processing Centers provide consolidated computing capabilities for the DoD. Regional information processing centers are financed through the Defense Working Capital Funds. Manpower resources and costs not covered by the working capital fund will be displayed within this category. Functional users of this service include the logistics commands of the Military Departments and Defense Agencies, the Defense Finance and Accounting Service, and the Defense Logistics Agency. The regional information processing service is currently provided through six regional processing centers and a number of detachments. Base information processing centers are also assigned to this category.

(2C4) Long-Haul Communications

Programs supporting the long-haul communications segment of the Defense Information Systems Network.

Long-Haul Communications is a particularly important category in the larger realm of DoD information requirements. The DISN is the current system within the DoD for common user, long-haul communications. "Common user" in this case refers to a general-purpose communications network available to all connected users. Long-Haul Communications unifies a geographically distributed organization by supporting administrative, logistical, and operational communications. DISN, in turn, operates

currently within the context of the DoD Global Information Grid concept.[27] The DISN is conceptually divided into three segments: Base, Deployed, and Long Haul. "Base" and "Deployed" are shorthand terms for DISN segments referred to previously in this section as the "supporting base" and the "operational forces." The conceptual division of the DISN generally corresponds to communications-related categories within various Forces and Infrastructure categories. The DISN Deployed segment generally corresponds to communications capabilities that have been assigned to Forces. The Base DISN segment generally corresponds to local base communications capabilities distributed over the various Infrastructure categories. The Long-Haul DISN segment is contained within the Communications & Information Infrastructure category. A key role of the DISN long-haul segment is to connect the DISN Base and DISN Deployed communications capabilities. This logically corresponds to the requirement to connect the forces with their supporting infrastructure. The Defense Information Systems Agency, with support from the Military Services, is the primary operator of this type of long-haul communications service.

(2C5) Information Security

Programs that support information assurance and communication security

Information Security is a continuous process that seeks to ensure secure communications capability among all DoD users. It includes information assurance and security programs from all DoD components.

2. Material Support

Three Infrastructure categories are primarily oriented towards the development, acquisition, maintenance, and distribution of material. Grouped under Material Support, these categories are shown in Figure VI-3. Material is a general term consisting of all physical items except for real property that are necessary to equip, operate, maintain, and support military

---

[27] The DISN is an important supporting element to the overall Defense Information Infrastructure or Global Information Grid. The concept of the Global Information Grid is particularly expansive and helps to give context to the overall Communications & Information Infrastructure category. The Defense Information Services Agency defines the Global Information Grid as including all owned and leased communications and computing systems and services, software (including applications), data, security services, and other associated services necessary for information superiority. It also includes National Security Systems as defined in section 5142 of the Clinger-Cohen Act of 1996. Additional information is available at www.disa.mil.

activities.[28] It includes major equipment items such as ships, tanks, and aircraft, along with fuel, lubricants, and the thousands of minor items necessary to unit operations. Material is a basic resource in the design of military units. Often major equipment items such as tanks or aircraft or ships provide the military unit its defining characteristics. When units begin to function, whether to train or to execute a mission, they begin to consume supplies and spare parts as they execute their cycles of operation and maintenance. The advanced engineering knowledge necessary to create these major equipment items, their subsequent development, and, finally, the centralized supply and maintenance activities that sustain unit operations are contained in the Material Support group.

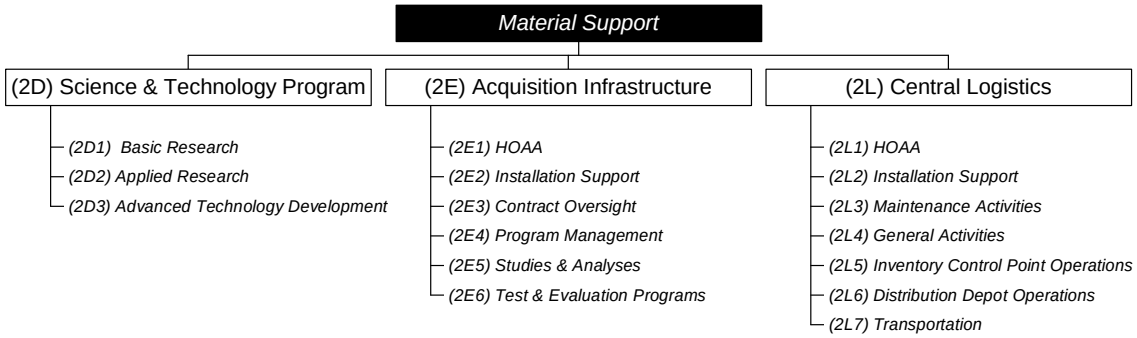

Figure VI-3. Material Support Categories and Codes

The three categories in the group operate serially to meet the requirements of the Forces. The activities of the Science & Technology Program, Acquisition Infrastructure, and Central Logistics categories correspond to the general life span of a weapon system from it definition to its disposal.

The Science & Technology Program provides the base of technical knowledge needed for the development of advanced weapon systems. The research process can precede actual systems development by a decade or more. It defines the boundary of

---

28 Joint Publication 1-02 formally defines *materiel* as "All items (including ships, tanks, self-propelled weapons, aircraft, etc., and related spares, repair parts, and support equipment, but excluding real property, installations, and utilities) necessary to equip, operate, maintain, and support military activities without distinction as to its application for administrative or combat purposes." (JP 1-02,"Department of Defense Dictionary of Military Terms," April 12, 2001, as amended through October 15, 2001, p. 266.)

technical feasibility to establish the requirements for future systems, and it creates a pool of technical knowledge that underpins the acquisition process. The Acquisition Infrastructure category develops, tests and procures equipment in cooperation with the defense industry. As equipment is produced and assigned to the operating units, the Central Logistics functions begin sustaining the delivered equipment. Although it is the logistics infrastructure that provides the primary support for unit operations, the acquisition community continues to monitor the technical health of the fielded equipment. It seeks out opportunities to improve the item's reliability, maintainability, and performance, particularly while the system remains in production. As the system moves out of production and approaches disposal age, Acquisition Infrastructure's involvement gradually diminishes. Final disposal of material is a function of the Central Logistics infrastructure.

(2D) Science & Technology Program

The program of scientific research and experimentation within the Department of Defense that seeks to advance fundamental science relevant to military needs and determine if the results can be successfully applied to military use. The Science & Technology program is defined as those Program Elements containing resources from Budget Activity 1, 2, or 3 of the RDT&E appropriations.

The Science & Technology Program category corresponds to budget activities 1, 2 and 3 of the Research, Development, Test and Evaluation (RDT&E) appropriations and is intended to conform with the categorizations in the budget submissions to the Congress. These three budget activities constitute the Defense Department's program of scientific research and experimentation for military application. In militarily relevant areas, it advances fundamental scientific knowledge and expands engineering expertise. Typical research areas include the material sciences, physics, and chemistry. Science & Technology Program and Acquisition Infrastructure are categories oriented towards creating the future force. Unlike Acquisition Infrastructure, the Science & Technology Program of research and experimentation is not formally connected with any single future system. Instead, the program creates a general science and engineering knowledge base for use in developing specific military systems.

(2D1) Basic Research

Science and technology programs with the purpose of increasing scientific understanding in those fields of physical, engineering, environmental, and life sciences relevant to military applications but without necessarily defined linkages to specific products or processes.

The three categories in the Science & Technology Program category correspond to a sequence of increasing scientific and engineering knowledge. This sequence can sometimes require decades to reach system application. It begins with the Basic Research category that works primarily in the area of fundamental science.

(2D2) Applied Research

Science and technology programs focusing on solutions to broadly defined categories of military needs and establishing general feasibility, practicality, and producibility.

Drawing from Basic Research and elsewhere, the Applied Research category focuses on broad categories of military needs to establish the technical application of fundamental scientific knowledge.

(2D3) Advanced Technology Development

Science and technology programs that involve the development or integration of hardware for field testing to establish the military utility or cost reduction potential of specific technologies against defined mission needs.

The Advanced Technology Development category refines technical feasibility by developing and integrating hardware for field-testing.

(2E) Acquisition Infrastructure

Acquisition Infrastructure activities develop, test, evaluate, and manage the procurement of military equipment and supporting systems. These activities also provide technical oversight throughout each system's useful life.

In general, Acquisition Infrastructure oversees the development, test and procurement of military equipment and other specialized systems from private industry. This category contains the major research, development and acquisition organizations of the Military Departments and the Defense Agencies except those that are part of the

formal Science and Technology Program. These organizations generally contract with private industry for the development and production of equipment and then manage the resulting programs. Individual program managers are assisted by the major contract management and auditing functions within the DoD that oversee these industry contracts.

The category also contains the major DoD test organizations. Prior to delivery of new systems, these organizations undertake developmental and operational testing to ensure effective systems for use by the forces. After the approved systems have been delivered, the acquisition infrastructure maintains a lifetime oversight of the technical health of these systems. This work is undertaken in close association with the logistics infrastructure that supports the equipment fleets. The acquisition infrastructure monitors equipment operations and plans major technical modifications necessary to extend the system's useful life.

Acquisition Infrastructure consists of six categories. Two of them are the common supporting functions of Headquarters & Other Administrative Activities and Installation Support. The remaining four functions capture activities involving contract oversight, program management, studies and analyses, and test and evaluation. The six categories are addressed in more detail below.

(2E1) Headquarters & Other Administrative Activities (HOAA)

Acquisition management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

There is a close relationship between the Acquisition Infrastructure and Central Logistics activities that can shape Program Elements assigned to their respective HOAA. Additional details are contained later in this chapter in the section describing the Central Logistics HOAA. For general information, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2E2) Installation Support

Installations at which units in the Acquisition Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2E3) Contract Oversight

Activities providing acquisition contract management services and auditing.

The Contract Oversight category contains the separately organized, contract oversight and auditing functions for the Department of Defense. This category captures resources of the Defense Contract Management Agency, the Defense Contract Audit Agency, and supporting resources from the Military Departments.

(2E4) Program Management

Acquisition program managers oversee development and procurement of military equipment and supporting systems. These activities also provide technical oversight throughout each system's useful life.

The program management function oversees the development of military equipment and other specialized systems. Program managers work closely with private industry and the contract management community in guiding systems development. The category contains resources for program offices and their equivalents, development activities (except for test), and for program executive office resources not contained in Management Headquarters Program Elements. In the Navy, certain Research and Development activities within this category are funded through a Working Capital Fund (WCF). Manpower resources and costs not covered by this portion of the Navy WCF are displayed in this category.

(2E5) Studies & Analyses

Funds studies supporting program analysis and decisionmaking.

Studies & Analyses supports the acquisition process through evaluation of alternative weapon system concepts. It supports senior-level decisionmaking through major technical studies that evaluate cost and feasibility.

(2E6) Test & Evaluation Programs

Programs that test and evaluate military equipment and supporting systems. Includes operational and developmental test and evaluation organizations, facilities, and programs.

Test and evaluation (T&E) serves the program management function through:

- *Developmental testing*, which refines weapon system development, and
- *Operational testing*, which evaluates the weapon system before acceptance by the operational user.

The Test & Evaluation Programs category is designed to capture most activities associated with the Major Range and Test Facility Base (MRTFB) as described in DoD Directive 3200.11. Significant portions of the MRTFB costs are funded through a WCF arrangement or other reimbursable arrangement. For each system being tested, the marginal costs for test activities are charged to the MRTFB customer, and normally are funded in the system development Program Element (usually assigned to Forces). The fixed costs to maintain the test ranges and facilities are borne by the appropriate Military Service and are funded in a test and evaluation Program Element (assigned to this Infrastructure category).

(2L) Central Logistics

Central Logistics programs provide supplies, depot-level maintenance of military equipment and supporting systems, transportation of material, and other products and services to customers throughout the DoD.

Central Logistics includes the wholesale supply and heavy maintenance activities operated by the Military Departments and Defense Agencies. In it are logistical capabilities external to the Forces that, on a day-to-day basis, provide:

- Parts, fuels, and lubricants,

- Depot repairs,
- Secondary equipment items, and
- Supplies for organizations, individuals, and equipment.

These Central Logistics activities augment and interact with the internal logistics capabilities of the combatant-assigned forces. Combatant-assigned capabilities include units responsible for organizational maintenance and retail supply operations. A simplified conceptual model of the relationship between Central Logistics and the combatant-assigned forces begins with organizational maintenance performed by Forces-assigned units. This maintenance typically consists of equipment servicing, such as the replacement of operating consumables like fuel and oil, along with equipment repair.[29] Central Logistics activities generate the stream of parts and consumables that sustain organizational maintenance activities. In turn, reparable parts are collected from the field and repaired for reuse within Central Logistics repair facilities. The cycle begins again with the dispersal of these parts to the forces through the wholesale supply system. The Central Logistics Infrastructure maintains warehouses, supply depots, and inventory control points for this purpose.

In addition to these repair and distribution activities, Central Logistics also provides the depot-level heavy maintenance and repair activities for major equipment items that are beyond the scope of organizational maintenance. These heavy overhauls, reworks, and other life-extension activities are necessary for the long-term material sustainment of the forces. The combination of these heavy maintenance, reparable parts, and wholesale supply activities infrastructure combine to meet the immediate material needs of the forces.

Central Logistics products and services are generally financed through the Defense Working Capital Funds. The general practice is that the appropriated funding for these products and services is contained in decentralized customer accounts, usually in Program Elements assigned to Forces. This is the case for consumable supplies and depot-level reparables. However, funding for depot-level maintenance is handled differently between and within the Military Services. The result is that, in some cases, depot maintenance funding is associated with Forces Program Elements. In other cases, it is associated with a centrally managed Program Element assigned to Infrastructure.

---

[29] This simplification omits the special circumstances of intermediate-level maintenance, which is treated as Forces or Infrastructure on a case-by-case basis.

Table VI-1 summarizes service cost placement for Depot Maintenance. This difference in funding placement is important in evaluating cost information based on Force & Infrastructure Categories. These differences can distort comparisons, particularly in relatively fine-grained logistical analyses.

Table VI-1. Depot Maintenance Cost Assignment by Service

Funding Location	Army	Navy	Marine Corps	Air Force
Forces		Ships		X
Infrastructure	X	Aircraft and Other Items	X	

Central Logistics consists of seven categories. Two of them are the common support functions of Headquarters & Other Administrative Support and Installation Support. The remaining five functions address maintenance activities, inventory control points, depot supply operations, general activities, and transportation. The seven categories are described in more detail in the paragraphs that follow.

(2L1) Headquarters & Other Administrative Activities (HOAA)

Central logistics management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

This category consists of the direct senior management for Central Logistic activities within the Military Departments and Defense Agencies. Management Headquarters for the Defense Logistics Agency (DLA) and the dedicated logistics management headquarters within the Service Major Commands are included in this category. There is a close relationship between the acquisition and logistical support of major weapon systems. This relationship is reflected in Service organizational arrangements that often include these functions in a single command and a single Program Element. Under these circumstances, Program Element assignments to Acquisition Infrastructure or Central Logistics HOAA may respectively under- or overstate actual costs. In addition, some portion of the DLA Management Headquarters activities is financed through a working capital fund arrangement. Displayed resources for these activities include manpower and costs not covered by the fund. For background on the construction of this common category, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2L2) Installation Support

Installations at which units in the Central Logistics category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

This category reflects installation resources in support of Central Logistics activities. Certain Navy Central Logistics facilities are financed through a working capital fund arrangement. Manpower resources and costs not covered by the working capital fund are displayed in this category. For details on this common category within Infrastructure categories, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2L3) Maintenance Activities

Centralized systems that provide depot-level maintenance products and services to customers.

This category captures the direct cost of depot maintenance operations and other heavy maintenance activities that are not assigned to Forces. Manpower resources and costs not covered by the working capital fund are displayed in this category.

(2L4) General Activities

Programs that manage a variety of central logistics programs such as printing plants, industrial preparedness, re-utilization and marketing service, and inactive weapons system storage.

These activities represent logistic support activities that support more than one Central Logistics activity.

(2L5) Inventory Control Point Operations

Programs that manage supply and material inventories.

Inventory control points are units or activities within the Military Departments and Defense Agencies assigned primary responsibility for the management of specific items within the supply system. They operate closely with distribution depots to provide direction for the cataloging of material, policy for the determination of supply requirements, direction for the procurement of new inventory, and management of the distribution process. The category displays manpower resources associated with the assigned Program Elements, along with those costs not covered by the working capital fund.

(2L6) Distribution Depot Operations

Programs that receive, store, and ship material items to customers.

This category captures the operation of supply depots as they dispense material to customers. Manpower resources and direct subsidies (to defray costs not covered by the working capital fund) are displayed in this category. In general, distribution depots take direction from inventory control points.

(2L7) Transportation

Programs that pay for delivery of items (1) from the manufacturer's point of shipment to DoD's point of delivery (First Destination Transportation) and (2) from the point of delivery to intermediate supply depots from which items will be shipped to customers (Second Destination Transportation).

This category captures direct logistics transportation costs not financed within customer accounts.

3. Personnel Support

The Personnel Support group of Infrastructure categories provide medical services; manage and produce non-pay benefits for Military Service members; recruit and train personnel; and provide selected services in support of DoD civilians. This group's focus is on DoD personnel—providing them benefits, managing their unit assignments, recruiting the necessary manpower, and providing individual training. As Figure VI-4

shows, the group consists of four categories: (1) Defense Health Program, (2) Central Personnel Administration, (3) Central Personnel Benefits and (4) Central Training.

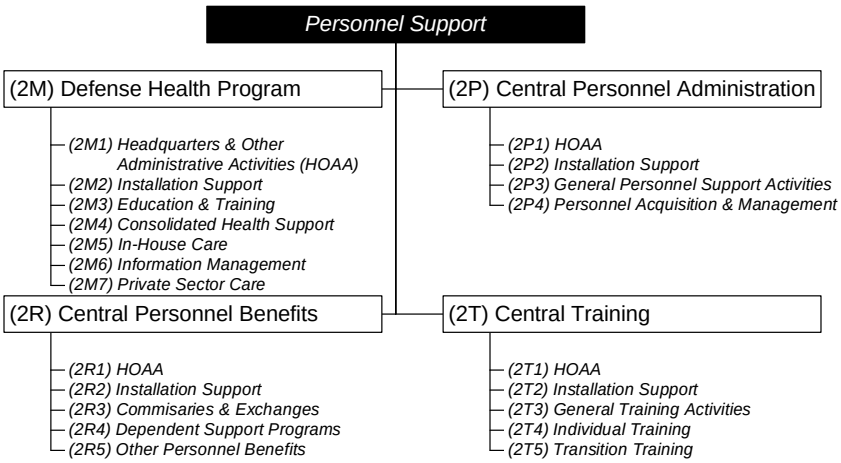

Figure VI-4. Personnel Support Categories and Codes

Each category provides a different type of support to DoD personnel. Defense Health Program (DHP) is both an operational requirement and a benefit program for military members, retirees, and their families. Central Personnel Administration provides recruitment, policy, and central administration. Central Personnel Benefits (CPB) provides additional non-pay benefits to DoD personnel. Central Training provides institutional training to add value to the DoD personnel resource. Examples include Basic Military Training and Undergraduate Pilot Training.

DHP and CPB are important pieces in the computation of total military personnel costs. (This issue was touched on in the discussion of forces and the display of their full cost, Chapter III, Section E.) One of the key components of total military personnel cost is total military compensation. The DHP and CPB categories combine to help approximate indirect total military compensation. Tracing the application of these categories to this purpose, in the context of total military compensation, provides insight to the distribution of DoD personnel costs within the FYDP and illuminates useful personnel cost data the F&IC structure provides.

The overall compensation area is complex and subtle. However, total military compensation can be roughly defined as the set of compensation entitlements that an eligible member of the Military Services is owed under the law. A rough summary of

compensation entitlements is the pay and benefits owed to a service member.[30] Given this approximation, compensation entitlements can be divided into direct and indirect compensation. Direct compensation consists of military pay (the pay and allowances that military members receive in their paycheck). Direct compensation is distributed to each Program Element. Indirect military compensation (the non-pay benefits of military service) largely consists of the DHP and CPB Infrastructure categories. DHP and CPB with the addition of bachelor housing (which is distributed in the Base Operations Support category within Installation Support) together reasonably approximate indirect total military compensation. These categories, when combined with military pay, should equate reasonably well with total military compensation. The computation of total military compensation can aid appropriate adjustments to FYDP-based manpower analyses. Additional details on this general topic are contained in the discussion of Central Personnel Benefits. Within the F&IC, key elements of total military compensation are distributed as follows:[31]

- Benefits in Central Personnel Benefits category
  - Family housing for service member families at military installations worldwide,
  - Military commissaries and exchanges,
  - Educational benefits, and
  - Family services such as youth centers.
- Benefits in other categories
  - Bachelor housing (in the Base Operations Support category),
  - Military Pay (in all categories), and
  - Medical Programs (in the Defense Health Program category).

---

30 The approximation used here excludes reimbursable entitlements that are formally a part of total military compensation. An example of a reimbursable entitlement is travel pay, which repays expenses incurred by military members in the performance of their duties. These are more properly distinguished as personnel expenses instead of compensation. For background, refer to *Military Compensation Background Papers*, Fifth Edition, September 1996, published by the Office of the Secretary of Defense.

31 The concept of total military compensation is an analytical feature of the Quadrennial Reviews of Military Compensation (QRMC). For supporting discussion refer to Military Compensation Background Papers, Fifth Edition, September 1996, or compensation working papers for the 8th QRMC at http://stinet.dtic.mil/special/qrmc/compensation.pdf. Figure 5 (p. 16) is a particularly useful taxonomy. A useful definition of military entitlements is contained in paragraph 8.1 of Air Force Policy Directive 36-30, "Entitlements," August 2, 1993.

(2M) Defense Health Program

Medical infrastructure and systems managed by ASD(Health Affairs) that provide health care to military personnel, dependents, and retirees.

The Defense Health Program (DHP) category corresponds with the budgetary program annually presented to the Congress by the DoD. The DHP and Central Personnel Benefits categories are centrally managed benefits available to all eligible service members. The DHP provides worldwide medical and dental services, veterinary services, specialized training for medical personnel, and occupational and industrial health care. Also included are the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) and TRICARE. They provide contract health care for eligible active-duty and retired members, their eligible family members, and their survivors. The DHP-assigned Program Elements do not distinguish between the cost of medical services and the cost of the infrastructure that produces those services.

The categories that make up the DHP Infrastructure category correspond to the budget categories of the Defense Health Program. Both are divided into the seven major areas briefly described below.

(2M1) Headquarters & Other Administrative Activities (HOAA)

Defense Health Program management headquarters and their supporting functions and initiatives. Management Headquarters are defined in DoDD 5100.37.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2M2) Installation Support

Installations at which units in the Defense Health Program category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2M3) Education & Training

Programs that provide medical education for active-duty personnel, civilian personnel, and students through the Armed Forces Health Professions Scholarship Program, the Financial Assistance Program, other pre-commissioning professional scholarship programs, and the Uniformed Services University of the Health Sciences.

(2M4) Consolidated Health Support

Programs that provide the multi-faceted underpinning needed for successful health care delivery, e.g., medical laboratories, data systems, regional managers, public health activities, veterinary services, recruit/officer candidate examinations, human factors laboratories, blood programs, aeromedical evacuation units, and the Armed Forces Institute of Pathology.

(2M5) In-House Care

Programs that provide patient medical care in defense medical centers, station hospitals, and medical clinics and dental care in hospitals, dental clinics, and regional dental activities.

(2M6) Information Management

Programs designed to improve the effectiveness and economy of health care delivery through the application of standardized automatic data processing techniques to health care information systems.

(2M7) Private Sector Care

Programs that provide private sector health care to DoD beneficiaries through the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS), TRICARE Managed Care Support (MCS) contracts, and Uniformed Services Family Health Program (USFHP).

(2P) Central Personnel Administration

Programs that acquire and administer the DoD workforce.

Personnel are a valuable resource within the military force structure. Managing nearly two million individuals, both uniformed military and civilians, is a large-scale undertaking. It requires the formulation and application of personnel policies and manpower doctrines necessary to maintain a vigorous, high-quality force. The activities within the Central Personnel Administration category access, classify, and administer all DoD personnel. It comprises the set of costs and resources that flow from the recruitment and administration of both civilian and military personnel. Of these two groups, the management of military personnel, along with their accession and re-assignment costs, dominate the category. Civilian personnel are also managed from this category, but comparable costs, such as re-assignment costs, are allocated differently. For the uniformed services, Central Personnel Administration includes the costs of:

- Recruiting personnel to military service,
- Assigning personnel to billets consistent with their qualifications,
- Managing personnel rotations to and from overseas locations, and
- Covering military personnel who are between assignments, patients, prisoners, or trainees in extended schooling.[32]

Personnel Administration organizations are typically centralized activities performed for an entire Military Department or for certain major commands (e.g., Administration of National Guard & Reserve manpower). The centralized organizations and activities within the category are those in the Military Departments and the Office of the Secretary of Defense that are dedicated to the management of personnel and manpower. Where there are central agencies that manage the civilian workforce, they are also contained in this category. Routine personnel administration, outside of these central activities, is associated with the supported organization. For example, personnel offices within the service's functional commands or within force activities, such as installation personnel offices, are assigned to the Forces or Infrastructure category of the supported organization.

---

[32] See DoDD 1315.7, Military Personnel Assignments.

(2P1) Headquarters & Other Administrative Activities (HOAA)

Central personnel administration management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2P2) Installation Support

Installations at which units in the Central Personnel Administration category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2P3) Personnel Support Activities

Programs that provide general overhead material or services that are available to all personnel infrastructure activities.

Personnel Support Activities includes general overhead material or services that support personnel infrastructure activities. These include personnel management software and equipment that aid with the overall personnel management function.

(2P4) Personnel Acquisition & Management

Programs that acquire and administer the DoD workforce. Major activities include recruiting new personnel, reassigning and moving on-board personnel, and managing end-strength and skills to the levels needed.

The Personnel Acquisition & Management category contains the core activities of the Central Personnel Administration category. The programs in this category acquire and administer the DoD workforce. Major activities include recruiting new personnel, reassigning and moving on-board personnel, and managing end-strength and skills to the levels needed. It includes recruiting and moving costs and accounts for personnel who are prisoners, patients, or between stations during moves.

(2R) Central Personnel Benefits

Programs that provide a number of benefits to service members. Includes family housing programs; commissaries and military exchanges; CONUS and overseas dependent schools; community, youth, and family centers; child-development activities; Off-Duty and Voluntary Education Programs; and a variety of ceremonial and morale-boosting activities. Also included are programs that help dependents recover from personal tragedies.

Central Personnel Benefits is one of the two centrally managed benefits programs for service members. It contains a significant fraction of the resources necessary to produce the indirect (non-pay) portion of total military compensation.[33] The Central Personnel Benefits category covers military family housing, direct appropriations for military commissaries and exchanges, educational benefits, and family service programs such as youth centers. The programs found in the Central Personnel Benefits category are considered to be indirect benefits since they are not allocated directly to the military members in the same way as military pay is. They are typically centrally managed services that are made available to military members through the organizations and facilities established on military installations. These benefits programs contribute to the DoD Quality of Life initiatives.

(2R2) Family Housing Activities

Programs that provide housing for military families. Includes family housing leasing and debt payment, construction and improvement, maintenance, and operations programs.

Family Housing Activities includes the cost of creating and maintaining government-owned family quarters for eligible service members and dependents. It includes improvements to family housing; costs of leasing supplemental family housing; operation, improvement, and maintenance of existing units; and costs of construction of new units. Family housing and bachelor housing together represent the centrally managed portion of the housing component within Basic Military Compensation (BMC). BMC

[33] For additional details, refer to the discussion on total military compensation in the introduction to subsection 3 (Personnel Support) of this chapter.

consists of the pay, allowances, and benefits to which all DoD active-duty service-members are entitled.[34]

(2R3) Commissaries & Exchanges

Programs that operate and manage commissaries, military exchanges, and the commissary troop issue subsistence support activity.

Commissaries & Exchanges includes appropriated funds and manpower associated with the sale of retail products, services, and groceries to service members and dependents. Its scope includes the Defense Commissary Agency (DECA), the Army-Air Force Exchange Service (AAFES), the Navy Exchange Service Command (NEXCOM), and the Marine Exchange system. Often these activities, particularly the military exchanges, generate earnings or dividends after expenses that are used for other Morale, Welfare, or Recreation (MWR) activities at military installations.[35]

Despite varying degrees of self-financing, commissary and exchange activities are operated with a combination of directly appropriated funds and some funds supplied by host military installations. Directly appropriated funds are usually limited (1) to military pay and allowances for service members assigned to support the activity and (2) to a specific subsidy for military commissaries. In special circumstances, appropriated funds can support retail-type activities at overseas and isolated U.S. installations or be used to transport commissary and exchange goods to overseas locations. Indirect support to these activities may be received through base services provided by the host installation.

---

34 One of the four major components of BMC is housing, to include subsistence, base pay, and the military income tax advantage. Many military members receive Basic Allowance for Housing (BAH) as part of their direct (pay) compensation. Military members occupying military family housing do not receive this allowance. The Family Housing Activities category represents the centrally managed portion of housing within the BMC. The housing component of BMC is completed with the addition of two elements outside this category: (1) bachelor housing provided as part of Base Operating Support Program Elements and (2) BAH included with military pay for eligible service members who are not occupying government housing. BAH is a part of military pay within each Program Element. *Military Compensation Background Papers*, 5th edition, September 1996, provides details on the analytical definitions of BMC and the more widely know, Regular Military Compensation.

35 For details, see DoDI 1015.10, "Programs for Military Morale, Welfare, and Recreation (MWR)," November 3, 1995.

Commissary and exchange activities represent an indirect benefit to military service members.[36]

(2R4) Dependent Support Programs

Programs that provide benefits to service members' dependents. Includes CONUS and overseas dependent schools; community, youth, and family centers; and child-development activities.

Programs in this category provide benefits primarily to military dependents. It includes Family Centers, and Child and Youth Development Centers at military installations, along with DoD Dependent schools both within the U.S and overseas. The DoD Educational Activity (DoDEA) consists of the DoD Dependents Schools (DoDDS), which is the overseas school system, and the DoD Domestic Dependent Elementary and Secondary Schools (DDESS), which assists schools in the U.S. Domestic schools are operated to provide education programs to eligible dependents residing on military installations where appropriate public education is unavailable.[37] DoD schools outside the United States provide education for all eligible dependents of military service members and DoD-employed civilians.[38]

---

36 For a detailed review of the benefits and costs of activities within this category see, "The Costs and Benefits of Retail Activities at Military Bases," Congressional Budget Office, October 1997. It provides the following useful overview (Chapter III):

> Unlike the commissary system, most Department of Defense programs that sell goods and services to current and former service members are non-appropriated-fund (NAF) activities. That means the money they receive from patrons is controlled by so-called non-appropriated-fund instrumentalities (NAFIs) of the federal government. NAFIs are federal financial entities, but their receipts and expenditures are not reflected in the federal budget. They can spend funds without a congressional authorization or appropriation and without resulting in federal budgetary outlays. DoD is not the only federal agency to use NAFIs. The Department of Veterans Affairs, the Coast Guard, and the State Department operate NAFIs for the benefit of their employees. DoD's NAFI program, however, is by far the largest. NAFIs within the Department of Defense collected and spent $11 billion in non-appropriated funds in 1995. About $7 billion of that went to purchase goods sold by NAF activities; the other $4 billion paid most of the operating costs of the activities. Those operating costs include the salaries of 160,000 NAF employees—federal workers who, because they are paid with non-appropriated funds, are not part of the civil service.

37 See DoDD 1342.21, "Department of Defense Section 6 Schools," October 13, 1992.

38 Details and policy are in DoDD 1342.6, "Department of Defense Dependent Schools (DoDDS)." October 13, 1992.

(2R5) Other Personnel Benefits

Programs that assist service members and dependents with a variety of needs. Included are Off-Duty and Voluntary Education Programs, and a variety of ceremonial and morale-boosting activities. Also included are programs that help dependents cope with personal tragedies.

Other Personnel Benefits captures all other indirect benefits for military service members not elsewhere categorized. It currently includes activities such as miscellaneous educational programs, subsistence-in-kind, and various benefits for service-members leaving military service.

(2T) Central Training

Programs that provide formal training to personnel at central locations away from their duty stations (school house).

The DoD Directive on Military Training (DoDD 1322.18) distinguishes training as either collective or individual. It further designates training of either type, occurring in an operational unit, as Unit Training.[39] The Central Training category excludes all Unit Training undertaken within operational units. It focuses on activity within formal training schools, training centers, and exercises that exist outside of the operational units.

The category consists in large part of institutional training activities—sometimes known as "schoolhouse training" or as formal training and education. Institutional training is individual training conducted in designated schools or training centers. In addition, the category contains those specialized activities that often transition the individual from schoolhouse training into operational units. These activities, for example, qualify pilots on the F-16 fighter aircraft after graduation from pilot training and before operational assignment. Such transition training activities are often operated by operationally oriented commands of the Military Services. They act as a bridge between the more formal setting of institutional training and the training activities within the operational unit. The distinction between individual and transition training forms

---

[39] DoDD 1322.18, "Military Training," defines these terms as follows (p. 2): *Collective Training*: Instruction and applied exercises that prepare an organizational team (such as a squad, aircrew, battalion, or multi-Service task force) to accomplish required military tasks as a unit. *Individual Training*: Instruction provided to an individual military member, either in a centralized training organization or in an operational unit, which prepares the member to perform specified military tasks. *Unit Training*: Individual or collective training conducted by an operational unit.

categories (described below) within the overall Infrastructure category. The additional category of General Training Activity is also provided.

(2T1) Headquarters & Other Administrative Activities (HOAA)

Central training management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2T2) Installation Support

Installations at which units in the Central Training category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2T3) General Training Activities

Programs that are not dedicated to a single training area but instead contribute to the delivery of training in each category.

General Training Activities includes training for organizational teams, such as multi-service task forces, which is normally conducted outside of force-assigned units. It also includes training range support activities and miscellaneous training devices and their development organizations. The category also includes improvements to training operations that can neither be classified as improvements to individual training nor specifically identified with Forces-assigned units.

(2T4) Individual Training

Programs that provide formal training to personnel at central locations away from their duty stations (school house training).

DoD directives classify Individual Training into two classes, Institutional Training (which is conducted in a school or training center) and On-the-Job Training (which is conducted in operational units or within infrastructure activities). The Individual Training category corresponds closely to Institutional Training as defined in DoDD 1322.18. It represents formal training typically conducted in designated courses by dedicated activities.[40]

(2T5) Transition Training

Training conducted in field locations that is required to transition individuals and units to new weapon systems, provide specialized pre-deployment training, and develop or teach new tactics through special unit-level exercise

Transition Training represents training conducted on operational weapon systems outside of unit training that qualifies individuals and units on new weapon systems or provides specialized or advanced training for units. Training of the latter type might occur before deployments or it might represent the culmination of a unit training cycle.

4. Departmental Policy & Administration

The Departmental Policy & Administration group represents the senior headquarters of the Military Departments, the Office of the Secretary of Defense, the Office of the Chairman of the Joint Chiefs of Staff, the Joint Staff, and the department-wide administrative services that integrate Forces and Infrastructure into a cohesive whole. This group conceptually oversees the three other groups of direct infrastructure. These policy and resource-allocating organizations seek to coordinate and integrate support to the warfighting forces. Figure VI-5 shows that Departmental Policy & Administration is represented by the single category of Departmental Management. The interactions between Departmental Management and the rest of the Infrastructure

---

[40] Definitions of collective, individual, institutional, unit, and on-the-job training in DoDD 1322.18 (p. 2) appear to be consistent with this outline.

categories are the most extensive and complicated of all the categories. Although this category does not have the tangible output of acquisition and logistics, it does provide a distinctive set of services across many categories.

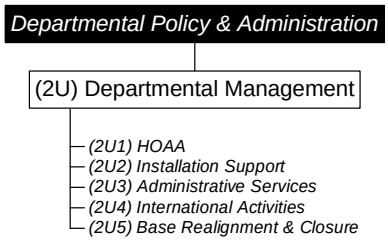

Figure VI-5. Departmental Policy & Administration Categories and Codes

Departmental Management contains the headquarters and staffs that provide policy, coordination, and resource allocation functions for all Infrastructure and Forces categories. The senior staffs of the Military Departments, the Joint Staff, and the Office of the Secretary of Defense evaluate current performance, formulate plans for the future, develop requirements, and reconcile these needs within overall resource levels. The results of these deliberations provide financial guidelines and policy for each category. This policy relationship is likely to be exercised with the various Headquarters & Other Administrative Activities (HOAA) in certain Infrastructure categories and with headquarters in Force's Operational Command category. Typically, functionally organized offices within each respective headquarters exchange information, coordinate policies, and maintain liaison. Through these interactions and through direct relationships between the leadership, the Departmental Management functions are exercised.

(2U) Departmental Management

Headquarters whose primary mission is to manage the overall programs and operations of the Department of Defense and its components. Also includes administrative, forces, and international management headquarters, and defense-wide support activities that are centrally managed. Excludes combatant headquarters (assigned to the Command & Intelligence Infrastructure) and the management headquarters that are associated with other Infrastructure categories.

The Departmental Management activity constitutes the top-level management functions within the Department of Defense. It is different from the management activities contained within the military forces themselves or within the infrastructure activities that create and sustain those forces. Those local management activities differ in

scope, focus, and level of detail from the activities of Departmental Management. Departmental Management activities are primarily concerned with the entire organization and the organization's relationships with external agencies. It deals with fundamental questions of organizational purpose, standards, balance, internal organization, and effectiveness. It constitutes a unique set of activities separate from the management of other specific Forces or Infrastructure categories. [41]

The specific role of the category is to integrate, synchronize, and balance the major programs and activities within and between the major DoD components and manage relations with the Executive Branch and the Congress. This broad role divides into two classes of activity: internal and external.

The internal function of Departmental Management focuses on broad segments of activities within the Department of Defense. The signature activities within this function are organization-wide resource allocation and long-term planning. It also includes important additional activities such as development, communication, and monitoring of organization-wide policies, and programs for managerial control.

The external function manages relationships outside the Department of Defense. The legislative affairs activities of the Military Departments and the OSD are representative of these functions, as are international activities such as foreign military sales and international training. Included in this category are activities of the senior headquarters of the Military Departments, the Office of the Secretary of Defense, and the Organization of the Joint Chiefs of Staff. Also included are defense-wide central services that provide specialized management control and resource allocation support for senior headquarters.

---

41 Management analyst Peter Drucker provides additional background on this description of the activities of Departmental Management. In *Management: Tasks, Responsibilities, Practices* (p. 609) Drucker writes, "…there are a number of tasks which are top-management tasks…because they are tasks that can be discharged only by people who are capable of seeing the whole business and making decisions with respect to the whole business." He contrasts top-level management with other managerial units that focus on one specific major organizational task (p. 611). In contrast, his concept of top management is multidimensional. It consists of (1) thinking through the mission of the business, (2) setting standards, (3) building and maintaining the human organization, (4) maintaining major organizational relationships, (5) performing ceremonial functions, and (6) having stand-by functions for collapse of subordinate task execution. These correspond reasonably well to the activities in Departmental Management.

(2U1) Headquarters & Other Administrative Activities (HOAA)

Departmental management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

Refer to Chapter V, Section E, "Functions Common to Multiple Categories," for general information about this category. However, a unique feature of this category that distinguishes it from other HOAA categories warrants explanation. A small number of Program Elements for Management Headquarters activities within the Transportation Working Capital Funds (TWCF) are assigned to CINC Activities (2U1D3) in this category. The headquarters activities within these PEs are funded through a working capital fund. For those activities, manpower resources and any direct subsidies are displayed with the PE and in the category. Remaining costs for this headquarters activity are contained within TWCF customer PEs. The TWCF is generally associated with Mobility Forces (1F1E).

(2U2) Installation Support

Installations at which units in the Departmental Management category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

For details, refer to Chapter V, Section E, "Functions Common to Multiple Categories."

(2U3) Administrative Services

Programs that support a variety of defense organizations and federal government agencies, e.g., security investigative services, industrial security and audit programs, public affairs activities, criminal investigations and judicial activities.

Administrative Services are those Military Service and department-wide activities that provide services or programs to enable the execution of senior management functions. Included in this category are services that provide or support financial management, public affairs, internal communications, and construction planning. Also included are the background investigative activities of the Defense Security Service (DSS) associated with the issuance of security clearances. Selected activities within the category are funded through a working capital fund. These activities include DSS and the

Defense Finance and Accounting Service (DFAS) financial management activities. For these activities, resource displays will show associated manpower and cost subsidies as appropriate. Remaining costs are allocated to customer accounts.

(2U4) International Activities

Programs that fund DoD participation in NATO and support other international activities of the department.

Consistent with the general discussion on the Departmental Management category, International Activities coordinate a specific type of external affairs for top-level management. It includes the liaison infrastructure that coordinates activities between senior management and foreign governments.

(2U5) Base Realignment & Closure (BRAC)

Programs intended to size the number of DoD installations to more closely approximate what is needed for projected DoD operations. Includes DoD BRAC programs.

Base Realignment & Closure is a set of centrally managed funds that are allocated towards financing the initial costs of closure (such as environment cleanup) in anticipation of future savings.

5. Other Infrastructure

The final group of infrastructure consists of categories created to deal with transitional problems within the F&IC taxonomy or for infrastructure programs within the Future Years Defense Program. Shown in Figure VI-6, this minor group consists of two categories, (1) Infrastructure Activities Not Elsewhere Classified (IANEC) and (2) Infrastructure Resource Adjustments.

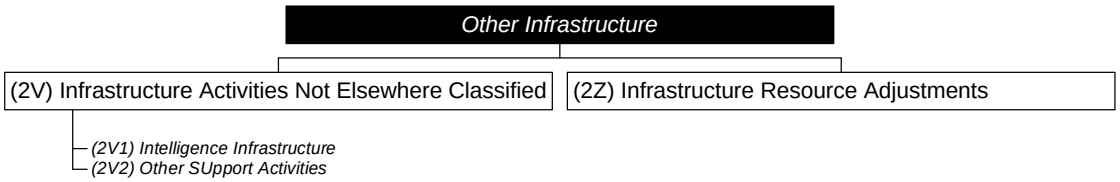

Figure VI-6. Other Infrastructure Categories and Codes

(2V) Infrastructure Activities Not Elsewhere Classified

These programs do not fit neatly in the other categories. They include programs that (1) provide management, basing, and operating support for DoD intelligence activities; (2) conduct weather and oceanographic activities; (3) manage and upgrade DoD-operated Air Traffic Control activities; (4) support warfighting, wargaming, and battle centers and major modeling and simulation programs; (5) procure and maintain contingency hospitals, mobilize medical reservists, identify disease/biological warfare agents, and improve combat medical equipment; and (6) fund CINC-sponsored or JCS-directed joint exercises.

This category reflects those infrastructure activities currently under study or whose placement in another category could distort its meaning. They do not fit neatly in other categories. Research continues for links and concepts that can logically include these items within other categories or to fully justify new categories. Current items within this category include centralized meteorological and oceanographic services, intelligence infrastructure, joint exercises, and medical Program Elements not included in the Defense Health Program.

(2V3) Intelligence Infrastructure

Programs that provide management, basing, and operating support for the DoD Intelligence activities.

Intelligence Infrastructure constitutes those non-operational activities that provide installation services and senior-level management for intelligence operations. All Program Elements containing infrastructure-type activities for intelligence operations are assigned to the Intelligence Infrastructure category.

(2V4) Other Support Activities

Programs that provide special services and products that facilitate or improve the conduct of military operations.

This category contains the following classes of Program Elements: (1) geophysical information activities supporting meteorological and oceanographic services, (2) air traffic control services and equipment, (3) warfighting, war-gaming, and modeling and simulation centers, (4) medical programs not formally associated with the Defense Health Program, and (5) Program Elements primarily containing transportation funding for Combatant Command or JCS-sponsored exercises.

(2Z) Infrastructure Adjustments

Centralized resource adjustments that were not allocated to the programs affected, e.g., Foreign Currency Fluctuation, Commissary Resale Stocks, and Force Structure Deviation.

This category contains centralized resource adjustments within the infrastructure that are not allocated to the programs affected (e.g., Foreign Currency Fluctuation, Commissary Resale Stocks, and Force Structure Deviation).

APPENDIX A:
COMBATANT COMMAND–ASSIGNED FORCES AND ACTIVITIES RETAINED BY THE MILITARY DEPARTMENTS

The following excerpt from Title 10, United States Code (USC), Section 162, from http://www.law.cornell.edu:80/uscode, reflects USC as of 16 January 1996. It explains responsibilities for assignment of forces to the Combatant Commands.

§ 162. Combatant commands: assigned forces; chain of command

(a) Assignment of Forces. (1) Except as provided in paragraph (2), ***the Secretaries of the military departments shall assign all forces under their jurisdiction to unified and specified combatant commands or to the United States element of the North American Air Defense Command*** to perform missions assigned to those commands. Such assignments shall be made as directed by the Secretary of Defense, including direction as to the command to which forces are to be assigned. The Secretary of Defense shall ensure that such assignments are consistent with the force structure prescribed by the President for each combatant command. (2) Except as otherwise directed by the Secretary of Defense, forces to be assigned by the Secretaries of the military departments to the combatant commands or to the United States element of the North American Air Defense Command under paragraph (1) ***do not include forces assigned to carry out functions of the Secretary of a military department listed in sections 3013(b), 5013(b), and 8013(b) of this title*** [*see next page*] ***or forces assigned to multinational peacekeeping organizations.*** (3) A force assigned to a combatant command or to the United States element of the North American Air Defense Command under this section may be transferred from the command to which it is assigned only (A) by authority of the Secretary of Defense; and (B) under procedures prescribed by the Secretary and approved by the President. (4) Except as otherwise directed by the Secretary of Defense, all forces operating within the geographic area assigned to a unified combatant command shall be assigned to, and…under the command of, the commander of that command. The preceding sentence applies to forces assigned to a specified combatant command only as prescribed by the Secretary of Defense.

(b) Chain of Command. - Unless otherwise directed by the President, the chain of command to a unified or specified combatant command runs (1) from the President to the Secretary of Defense; and (2) from the Secretary of Defense to the commander of the combatant command. [***Emphasis*** *added.*]

Title 10 USC directs that forces assigned to carry out the following twelve functions be retained under the control of the Service Secretary and not assigned to Combatant Commands:[1]

1. Recruiting
2. Organizing
3. Supplying
4. Equipping (including research and development)
5. Training
6. Servicing
7. Mobilizing
8. Demobilizing
9. Administering (including the morale and welfare of personnel)
10. Maintaining
11. The construction, outfitting, and repair of military equipment
12. The construction, maintenance, and repair of buildings, structures, and utilities and the acquisition of real property and interests in real property necessary to carry out the responsibilities specified in this section

[1] The relevant sections of Title 10 USC are 3013(b), 5013(b), and 8013(b) for the Army, Navy, and Air Force, respectively

APPENDIX B:
F&IC TAXONOMY

Figures B-1 and B-2 show the four top-level tiers of the F&IC taxonomy for Forces and Infrastructure respectively. Some categories have more than four tiers. To see a list of all the categories in the F&IC structure, along with their Program Element assignments, see Appendix D.

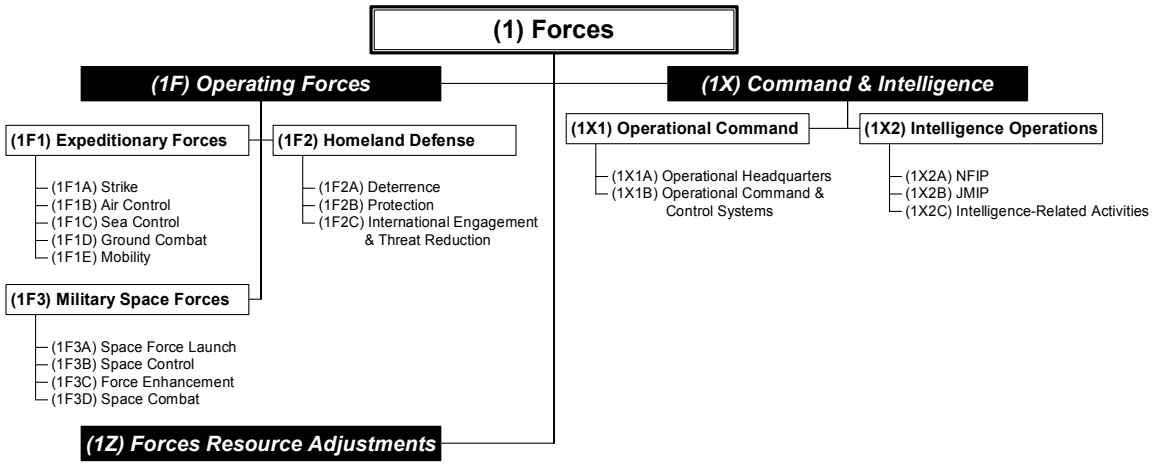

Figure B-1. F&IC Taxonomy Structure—Forces

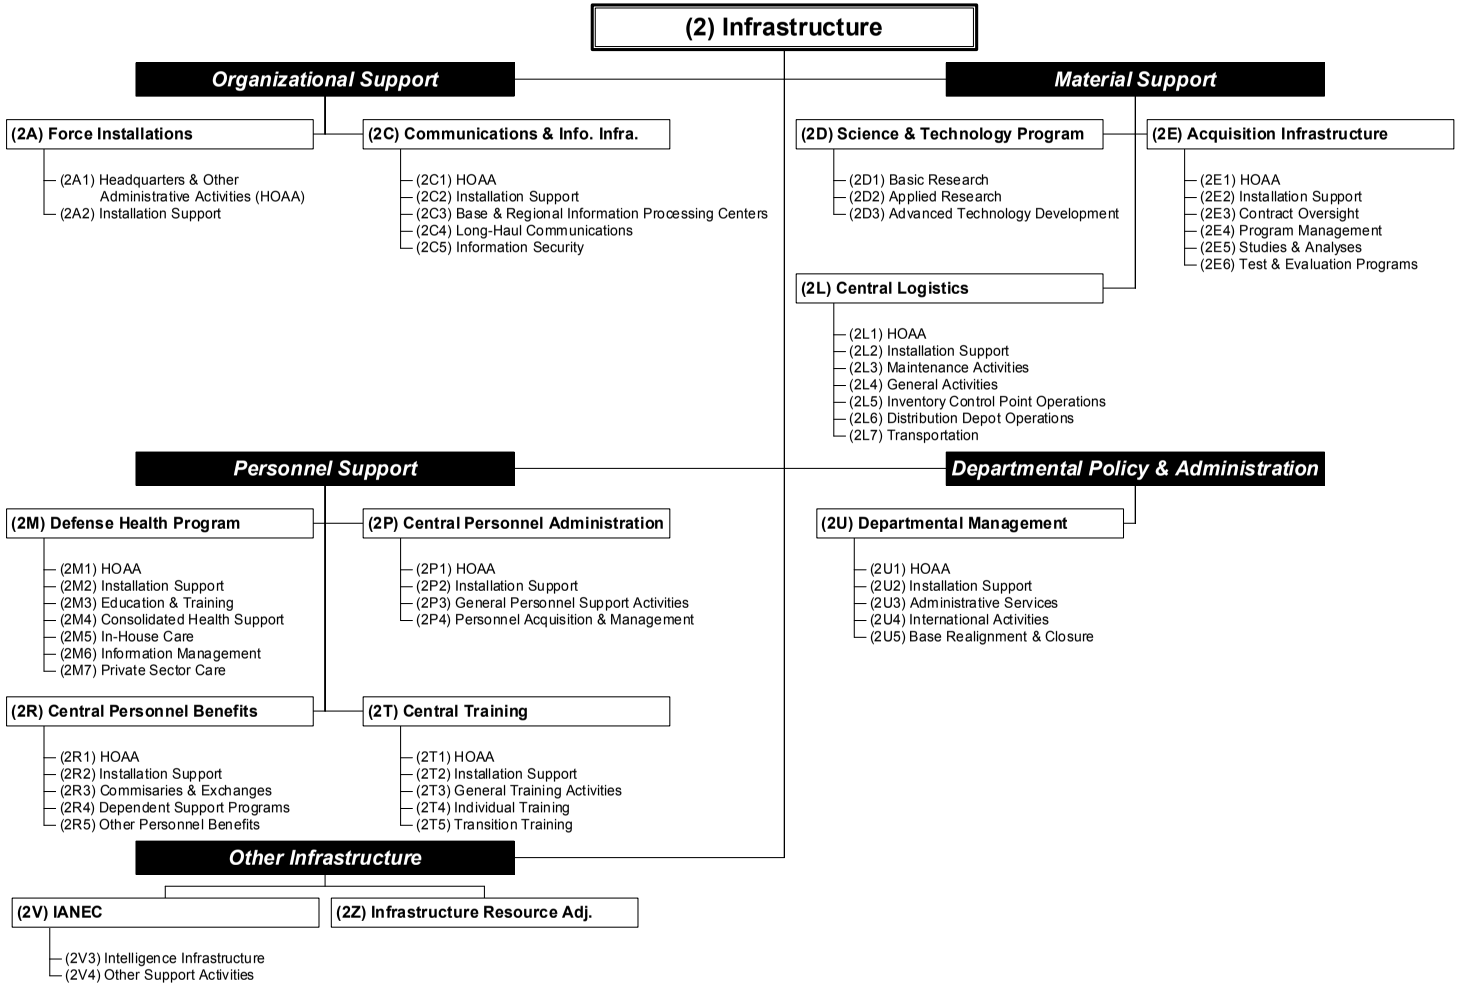

Figure B-1. F&IC Taxonomy Structure—Infrastructure

APPENDIX C:
FORCE & INFRASTRUCTURE CATEGORY DEFINITIONS

(1) Forces

Military units assigned to the Combatant Commands, their command and control elements, and their organic supporting units. The resources (dollars, manpower, and equipment) allocated to these units are associated with forces. In addition, agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense are included along with the national and joint military intelligence programs.

(1F) Operating Forces

Forces assigned to the Combatant Commands, along with their closely related activities, operating resources and those agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense.

(1F1) Expeditionary Forces

Operating forces designed primarily for non-nuclear operations outside the United States.

(1F1A) Strike

Expeditionary forces designed to damage and destroy enemy targets at long ranges from friendly bases. Strike forces are designed to deliver their effects through penetration and withdrawal from enemy territory or by delivery of standoff weapons at extended ranges.

(1F1B) Air Control

Expeditionary forces designed primarily to defeat enemy air attacks within a military theater. Air control forces enable the capabilities of other forces to be brought to bear against the enemy. Air Control includes protection against Theater Ballistic Missiles.

(1F1C) Sea Control

Expeditionary forces designed to deny offensive use of the seas to the enemy and to secure sea-lanes against interdiction. Sea control enables the capabilities of other forces to be brought to bear against the enemy.

(1F1D) Ground Combat

Expeditionary forces and closely related activities designed primarily for the defeat of opposing ground forces and for the establishment of control over land areas.

(1F1E) Mobility

Expeditionary forces and resources designed to support the deployment of expeditionary forces.

(1F2) Homeland Defense

Operating forces designed primarily to deter or defeat direct attacks on the United States and its territories and agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense.

(1F2A) Deterrence

Homeland defense forces with the primary mission of deterring attacks on the United States and its territories by means of retaliation against an attacker.

(1F2B) Protection

Homeland defense forces or activities with the primary mission of defeating attacks or intrusions on the United States and its territories.

(1F2C) International Engagement & Threat Reduction

Arms control and threat-reduction activities under the supervision of the Office of the Secretary of Defense.

(1F3) Military Space Forces

Operating forces deployed in space and their associated supporting elements.

(1F3A) Space Force Launch

Space vehicles and supporting facilities that deploy space force systems.

(1F3B) Space Control

Space forces and supporting elements designed primarily for the surveillance or defeat of enemy space activities

(1F3C) Force Enhancement

Space forces and supporting elements designed primarily to provide support to expeditionary and homeland defense forces.

(1F3D) Space Combat

Space forces and supporting elements designed primarily to conduct combat operations using space-based weapons.

(1X) Command & Intelligence

Programs that provide effective direction and control of combatant military operations. These programs include dedicated operational headquarters, associated command and control systems, and intelligence collection and exploitation.

(1X1) Operational Command

Combatant Command headquarters and component headquarters (as defined in DoDD 5100.73) primarily responsible for directing and controlling the employment of global or theater-level U.S. military forces along with the technical means for exercising operational control.

(1X1A) Operational Headquarters

Combatant Command headquarters and component headquarters responsible for the exercise of operational control over the employment of U.S. military forces.

(1X1B) Operational Command & Control Systems

The dedicated facilities, equipment, communications, and personnel for the support of operational headquarters in their exercise of operational control over the employment of U.S. military forces.

(1X2) Intelligence Operations

Specified operational resources of the National Foreign Intelligence Program, the Joint Military Intelligence Program, and other related activities.

(1X2A) National Foreign Intelligence Program

Specified operational resources of the National Foreign Intelligence Program as defined by Executive Order.

(1X2B) Joint Military Intelligence Program

Specified operational resources of the Joint Military Intelligence Program.

(1X2C) Intelligence Related Activities

Operational intelligence activities not associated with the operating forces, the National Foreign Intelligence Program or the Joint Military Intelligence Program.

(1Z) Forces Resource Adjustments

Programs that record centralized resource adjustments that were not allocated to the programs affected, e.g., Foreign Currency Fluctuation, Commissary Resale Stocks, and Force Structure deviations.

(2) Infrastructure

Departmental or Agency-assigned activities that provide manpower, materiel, facilities, services, and information needed by units assigned to the Combatant Commands. Infrastructure is the means of producing and sustaining the force. Forces (and their sustainment) are products of the infrastructure.

(2A) Force Installations

Installations at which units in the forces category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2A1) Force Installations—Headquarters & Other Administrative Activities

Force installations management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2A2) Force Installations—Installation Support

Installations at which units in the Forces category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2A2A) Force Installations—Environmental Programs

Programs that protect or restore the environment on forces installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2A2B) Force Installations—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at force installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2A2B1) Force Installations—Base Operations Support

The services and organizations necessary to house and sustain the units at force installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2A2B2) Force Installations—Base Communications

Programs that provide communications services at force installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces.

(2A2C) Force Installations—Facilities Support

Programs that sustain, restore, and modernize force installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2C) Communications & Information Infrastructure (C&II)

Programs that provide secure information distribution, processing, storage, and display. The major elements include long-haul communications systems, base computing systems, Defense Enterprise Computing Centers and detachments, and information assurance programs. (Note: communication and computer activities dedicated to other Infrastructure categories are assigned to those categories.)

(2C1) C&II—Headquarters & Other Administrative Activities

Communications and information management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2C2) C&II—Installation Support

Installations at which units in the Communications & Information Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2C2A) C&II—Environmental Programs

Programs that protect or restore the environment on Communications & Information Infrastructure installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2C2B) C&II—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Communications & Information Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2C2B1) C&II—Base Operations Support

The services and organizations necessary to house and sustain the units at Communications & Information Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2C2B2) C&II—Base Communications

Programs that provide communications services at Communications & Information Infrastructure installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2C2C) C&II—Facilities Support

Programs that sustain, restore, and modernize Communications & Information Infrastructure installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2C3) C&II—Base & Regional Information Processing Centers

Non-tactical base computers and the Defense Enterprise Computing Centers and Detachments.

(2C4) C&II—Long-Haul Communications

Programs supporting the long-haul communications segment of the Defense Information Systems Network (DISN).

(2C5) C&II—Information Security

Programs that support information assurance and communication security.

(2D) Science & Technology Program (S&TP)

The program of scientific research and experimentation within the Department of Defense that seeks to advance fundamental science relevant to military needs and determine if the results can be successfully applied to military use. The Science & Technology Program is defined as those Program Elements containing resources from Budget Activity 1, 2, or 3 of the RDT&E appropriations.

(2D1) S&TP—Basic Research

Science and technology programs with the purpose of increasing scientific understanding in those fields of physical, engineering, environmental, and life sciences relevant to military applications but without necessarily defined linkages to specific products or processes.

(2D2) S&TP—Applied Research

Science and technology programs focusing on solutions to broadly defined categories of military needs and establishing general feasibility, practicality, and producibility.

(2D3) S&TP—Advanced Technology Development

Science and technology programs that involve the development or integration of hardware for field testing to establish the military utility or cost reduction potential of specific technologies against defined mission needs.

(2E) Acquisition Infrastructure

Acquisition Infrastructure activities develop, test, evaluate, and manage the procurement of military equipment and supporting systems. These activities also provide technical oversight throughout each system's useful life.

(2E1) Acquisition Infrastructure—Headquarters & Other Administrative Activities

Acquisition management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2E2) Acquisition Infrastructure—Installation Support

Installations at which units in the Acquisition Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2E2A) Acquisition Infrastructure—Environmental Programs

Programs that protect or restore the environment on Acquisition Infrastructure installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This

category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2E2B) Acquisition Infrastructure—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Acquisition Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2E2B1) Acquisition Infrastructure—Base Operations Support

The services and organizations necessary to house and sustain the units at Acquisition Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2E2B2) Acquisition Infrastructure—Base Communications

Programs that provide communications services at Acquisition Infrastructure installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2E2C) Acquisition Infrastructure—Facilities Support

Programs that sustain, restore, and modernize Acquisition Infrastructure installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2E3) Acquisition Infrastructure—Contract Oversight

Activities providing acquisition contract management services and auditing.

(2E4) Acquisition Infrastructure—Program Management

Acquisition program managers oversee development and procurement of military equipment and supporting systems. These activities also provide technical oversight throughout each system's useful life.

(2E5) Acquisition Infrastructure—Studies & Analyses

Funds studies supporting program analysis and decisionmaking.

(2E6) Acquisition Infrastructure—Test & Evaluation Programs

Programs that test and evaluate military equipment and supporting systems. Includes operational and developmental test and evaluation organizations, facilities, and programs.

(2L) Central Logistics

Central Logistics programs provide supplies, depot-level maintenance of military equipment and supporting systems, transportation of material, and other products and services to customers throughout the DoD.

(2L1) Central Logistics—Headquarters & Other Administrative Activities

Central logistics management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

2L2) Central Logistics—Installation Support

Installations at which units in the Central Logistics category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2L2A) Central Logistics—Environmental Programs

Programs that protect or restore the environment on Central Logistics installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2L2B) Central Logistics—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Central Logistics installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2L2B1) Central Logistics—Base Operations Support

The services and organizations necessary to house and sustain the units at Central Logistics installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2L2B2) Central Logistics—Base Communications

Programs that provide communications services at Central Logistics installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2L2C) Central Logistics—Facilities Support

Programs that sustain, restore, and modernize Central Logistics installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2L3) Central Logistics—Maintenance Activities

Centralized systems that provide depot-level maintenance products and services to customers.

(2L4) Central Logistics—General Activities

Programs that manage a variety of central logistics programs such as printing plants, industrial preparedness, re-utilization and marketing service, and inactive weapon system storage.

(2L5) Central Logistics—Inventory Control Point Operations

Programs that manage supply and material inventories.

(2L6) Central Logistics—Distribution Depot Operations

Programs that receive, store, and ship material items to customers.

(2L7) Central Logistics—Transportation

Programs that pay for delivery of items (1) from the manufacturer's point of shipment to DoD's point of delivery (First Destination Transportation) and (2) from the point of delivery to intermediate supply depots from which items will be shipped to customers (Second Destination Transportation).

(2M) Defense Health Program (DHP)

Medical infrastructure and systems managed by ASD(Health Affairs) that provide health care to military personnel, dependents, and retirees.

(2M1) Defense Health Program—Headquarters & Other Administrative Activities

Defense Health Program management headquarters and their supporting functions and initiatives. Management Headquarters are defined in DoDD 5100.37.

(2M2) Defense Health Program—Installation Support

Installations at which units in the Defense Health Program category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2M2A) Defense Health Program—Environmental Programs

Programs that protect or restore the environment on Defense Health Program installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2M2B) Defense Health Program—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Defense Health Program installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2M2B1) Defense Health Program—Base Operations Support

The services and organizations necessary to house and sustain the units at Defense Health Program installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2M2B2) Defense Health Program—Base Communications

Programs that provide communications services at Defense Health Program installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2M2C) Defense Health Program—Facilities Support

Programs that sustain, restore, and modernize Defense Health Program installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2M3) Defense Health Program—Education & Training

Programs that provide medical education for active-duty personnel, civilian personnel, and students through the Armed Forces Health Professions Scholarship Program, the Financial Assistance Program, other pre-commissioning professional scholarship programs, and the Uniformed Services University of the Health Sciences.

(2M4) Defense Health Program—Consolidated Health Support

Programs that provide the multi-faceted underpinning needed for successful health care delivery, e.g., medical laboratories, data systems, regional managers, public health activities, veterinary services, recruit/officer candidate examinations, human factors laboratories, blood programs, aeromedical evacuation units, and the Armed Forces Institute of Pathology.

(2M5) Defense Health Program—In-House Care

Programs that provide patient medical care in defense medical centers, station hospitals, and medical clinics and dental care in hospitals, dental clinics, and regional dental activities.

(2M6) Defense Health Program—Information Management

Programs designed to improve the effectiveness and economy of health care delivery through the application of standardized automatic data processing techniques to health care information systems.

(2M7) Defense Health Program—Private Sector Care

Programs that provide private sector health care to DoD beneficiaries through the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS), TRICARE Managed Care Support (MCS) contracts, and Uniformed Services Family Health Program (USFHP).

(2P) Central Personnel Administration (CPA)

Programs that acquire and administer the DoD workforce.

(2P1) CPA—Headquarters & Other Administrative Activities

Central personnel administration management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2P2) CPA—Installation Support

Installations at which units in the Central Personnel Administration category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2P2A) CPA—Environmental Programs

Programs that protect or restore the environment on Central Personnel Administration installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2P2B) CPA—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Central Personnel Administration installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2P2B1) CPA—Base Operations Support

The services and organizations necessary to house and sustain the units at Central Personnel Administration installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2P2B2) CPA—Base Communications

Programs that provide communications services at Central Personnel Administration installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2P2C) CPA—Facilities Support

Programs that sustain, restore, and modernize Central Personnel Administration installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2P3) CPA—General Personnel Support Activities

Programs that provide general overhead material or services that are available to all personnel Infrastructure categories.

(2P4) CPA—Personnel Acquisition and Management

Programs that acquire and administer the DoD workforce. Major activities include recruiting new personnel, reassigning and moving on-board personnel, and managing end-strength and skills to the levels needed.

(2P4A) CPA—Personnel Management

Programs that administer the DoD workforce. Major activities include reassigning on-board personnel, and managing end-strength and skills to the levels needed.

(2P4B) CPA—Permanent Change of Station (PCS) Costs

Programs that move service members and dependents in the DoD workforce to new duty stations.

(2P4C) CPA—Acquisition of New Personnel

Programs that acquire new service members for the DoD workforce. Major activities include recruiting, advertising, examining, and in-processing activities for new personnel and administering the veterans education assistance program.

(2P4D) CPA—Personnel Not Available for Duty

Personnel assigned to hospital or disciplinary confinement and those en route to a duty assignment from training or to a Permanent Change of Station (PCS) duty assignment.

(2R) Central Personnel Benefits Programs (CPB)

Programs that provide benefits to service members. Includes family housing programs; commissaries and military exchanges; CONUS and overseas dependent schools;community, youth, and family centers; child-development activities; Off-Duty and Voluntary Education Programs, and a variety of ceremonial and morale-boosting activities. Also included are programs that help dependents recover from personal tragedies.

(2R2) CPB—Family Housing Activities

Programs that provide housing for military families. Includes family housing leasing and debt payment, construction and improvement, maintenance, and operations programs.

(2R3) CPB—Commissaries & Exchanges

Programs that operate and manage commissaries, military exchanges, and the commissary troop issue subsistence support activity.

(2R4) CPB—Dependent Support Programs

Programs that provide benefits to service members' dependents. Includes CONUS and overseas dependent schools; community, youth, and family centers; and child-development activities.

(2R4A) CPB—Child Development

Programs that assist with the intellectual, social, emotional, and physical development of children.

(2R4B) CPB—Family Centers

Programs that assist families with information on spousal employment opportunities, assistance during relocations, crisis referral and aid for families, information on financial planning and family support resources, and services for families with special needs.

(2R4C) CPB—DoD Schools

Programs that help provide children with adequate schooling opportunities in CONUS and in overseas areas where local schools are not adequate or not available.

(2R5) CPB—Other Personnel Benefits

Programs that assist service members and dependents with a variety of needs. Included are Off-Duty and Voluntary Education Programs and a variety of ceremonial and morale-boosting activities. Also included are programs that help dependents cope with personal tragedies.

(2T) Central Training

Programs that provide formal training to personnel at central locations away from their duty stations (school house).

(2T1) Central Training—Headquarters & Other Administrative Activities

Central training management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2T2) Central Training—Installation Support

Installations at which units in the Central Training category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2T2A) Central Training—Environmental Programs

Programs that protect or restore the environment on Central Training installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2T2B) Central Training—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Central Training installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2T2B1) Central Training—Base Operations Support

The services and organizations necessary to house and sustain the units at Central Training installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2T2B2) Central Training—Base Communications

Programs that provide communications services at Central Training installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2T2C) Central Training—Facilities Support

Programs that sustain, restore, and modernize Central Training installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2T3) Central Training—General Training Activities

Programs that are not dedicated to a single training area but instead contribute to the delivery of training in each category.

(2T4) Central Training—Individual Training

Programs that provide formal training to personnel at central locations away from their duty stations (school house training).

(2T4A) Central Training—Enlisted Personnel

Programs that provide formal training to enlisted personnel at central locations away from their duty stations (school house training).

(2T4A1) Central Training—Recruit Training

Training infrastructure programs that provide basic military training and indoctrination to enlisted recruits.

(2T4A2) Central Training—Enlisted Technical Training

Training infrastructure programs that provide technical training to enlisted personnel, (Note: Data not currently available in Program Elements.)

(2T4A3) Central Training—Enlisted Leadership Training

Training infrastructure programs that provide leadership training to enlisted personnel. (Note: Data not currently available in Program Elements.)

(2T4B) Central Training—Officer Personnel

Programs that provide formal training to officer personnel at central locations away from their duty stations (school house training).

(2T4B1) Central Training—Initial Officer Training

Training infrastructure programs that provide basic military training and indoctrination to officer candidates through college commissioning programs, officer candidate/training schools, and the three service academies.

(2T4B2) Central Training—Aviation and Flight Training

Training infrastructure programs that provide flight screening, undergraduate pilot training, navigator training, EURO-NATO training and the procurement of new training aircraft.

(2T4B3) Central Training—Career Officer Training

Training infrastructure programs that provide career training to officer personnel. (Note: Data not currently available in Program Elements.)

(2T4B4) Central Training—Officer Leadership Training

Training infrastructure programs that provide leadership training to officer personnel. (Note: Data not currently available in Program Elements.)

(2T4C) Central Training—Civilian Education

Programs that provide training, education, and development of DoD civilian executives, management officials, supervisors, and employees as called for by applicable directives.

(2T4D) Central Training—Reserve Training

Training infrastructure programs that provide recruit and officer candidate training followed by the full range of flight training, progressive skill training, professional military education opportunities.

(2T4E) Central Training—Professional & Skill Training

Training infrastructure programs that provide a range of progressive skill training and professional military education opportunities, including Acquisition and Language training and advanced academic degrees.

(2T4E1) Central Training—General Skill Training

Training infrastructure programs that teach (1) entry-level job skills after completion of initial military training and (2) skill progression training needed for an individual to acquire intermediate and advanced skills later in his or her military career.

(2T4E2) Central Training—Acquisition Skill Training

Training infrastructure programs that provide acquisition education and training through the USD(AT&L)-managed scholarship program, the Defense Acquisition University, service-sponsored schools, Acquisition Enhancement Program, and other mandatory DoD acquisition courses.

(2T4E3) Central Training—Professional Military Education

Training infrastructure programs that provide (1) professional military education at each level of career progression and (2) advanced academic degrees needed for work in specific organizations and tasks.

(2T4E4) Central Training—Foreign Language Training

Training infrastructure programs that provide language instruction through the Defense Language Institute, extended as necessary to meet SOF Language Training requirements.

(2T4E5) Central Training—Other Professional and Skill Training

Training infrastructure programs that provide training opportunities in areas not included in other categories. Examples are space operations and business management.

(2T5) Central Training—Transition Training

Training conducted in field locations that is required to transition individuals and units to new weapon systems, provide specialized pre-deployment training, and develop or teach new tactics through special unit-level exercises.

(2U) Departmental Management (DM)

Headquarters whose primary mission is to manage the overall programs and operations of the Department of Defense and its components. Also includes administrative, forces, and international management headquarters, and defense-wide support activities that are centrally managed. Excludes combatant headquarters (assigned to Command & Intelligence Infrastructure) and the management headquarters that are associated with other Infrastructure categories.

(2U1) DM—Headquarters & Other Administrative Activities

Departmental management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2U1A) DM—Departmental Headquarters

The Washington headquarters of the Department of Defense.

(2U1A1) DM—OSD Staff

The Office of the Secretary of Defense and its supporting activities.

(2U1A2) DM—JCS Staff

The Organization of the Joint Chiefs of Staff and its supporting activities.

(2U1A3) DM—Military Department Headquarters

The Secretariats and Washington headquarters of the military departments.

(2U1B) DM—Administrative Management Headquarters

Management headquarters for defense-wide support activities managed at the headquarters level.

(2U1C) DM—International Management Headquarters

Management headquarters supporting NATO participation and other international activities of the department.

(2U1D) DM—Force Management Headquarters

Major service headquarters that are primarily responsible for overseeing, directing, and controlling subordinate organizations or units through providing policy guidance, evaluating program performance, allocating or distributing resources, or conducting mid- and long-range planning, programming, and budgeting. Also includes service operational headquarters and the management headquarters and other activities of the Combatant Commands.

(2U1D1) DM—Management Headquarters

Major service headquarters that are primarily responsible for overseeing, directing, and controlling subordinate organizations or units through providing policy guidance, evaluating program performance, allocating or distributing resources, or conducting mid- and long-range planning, programming, and budgeting.

(2U1D2) DM—Operational Headquarters

Major field headquarters and supporting activities of the military services.

(2U1D3) DM—CINC Activities

Combatant Commands management headquarters and supporting activities.

(2U2) DM—Installation Support

Installations at which units in the Departmental Management category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2U2A) DM—Environmental Programs

Programs that protect or restore the environment on Departmental Management installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2U2B) DM—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Departmental Management installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2U2B1) DM—Base Operations Support

The services and organizations necessary to house and sustain the units at Departmental Management installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2U2B2) DM—Base Communications

Programs that provide communications services at Departmental Management installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

(2U2C) DM—Facilities Support

Programs that sustain, restore, and modernize Departmental Management installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2U3) DM—Administrative Services

Programs that support a variety of defense organizations and federal government agencies, e.g., security investigative services, industrial security and audit programs, public affairs activities, and criminal and judicial activities.

(2U3A) DM—Service-Wide Activities

Programs managed at headquarters level that provide service-wide support, support to non-DoD activities, and reserve mobilization.

(2U3B) DM—Defense-Wide Activities

Centrally managed activities that provide a range of services for the entire department.

(2U3B1) DM—Security & Investigative Activities

The department-wide system for obtaining and maintaining security clearances for personnel, as well as service security and investigative activities that are not part of the NFIP foreign counterintelligence program.

(2U3B2) DM—Defense Agencies

Agencies that provide specific services, such as finance and accounting, to all of DoD.

(2U3B3) DM—Other Defense-Wide Activities

Department-wide support activities that are managed by the Office of the Secretary of Defense.

(2U4) DM—International Activities

Programs that fund DoD participation in NATO and support other international activities of the department.

(2U5) DM—Base Realignment and Closure

Programs intended to size the number of DoD installations to more closely approximate what is needed for projected DoD operations. Includes DoD BRAC programs.

(2V) Infrastructure Activities Not Elsewhere Categorized (IANEC)

These programs do not fit neatly in the other categories. They include programs that (1) provide management, basing, and operating support for DoD intelligence activities; (2) conduct weather and oceanographic activities; (3) manage and upgrade DoD-operated Air Traffic Control activities; (4) support warfighting, wargaming, and battle centers and major modeling and simulation programs; (5) procure and maintain contingency hospitals, mobilize medical reservists, identify disease/biological warfare agents, and improve combat medical equipment; and (6) fund CINC-sponsored or JCS-directed joint exercises.

(2V3) IANEC—Intelligence Infrastructure

Programs that provide management, basing, and operating support for the DoD Intelligence activities.

(2V3A) IANEC—Headquarters & Other Administrative Activities

Intelligence Management Headquarters and their supporting functions and initiatives. Management Headquarters are defined in DoDD 5100.37.

(2V3B) IANEC—Installation Support

Installations at which units in the Intelligence Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2V3B1) IANEC—Environmental Programs

Programs that protect or restore the environment on Intelligence Infrastructure installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2V3B2) IANEC—Base Operations Support

The services and organizations necessary to house and sustain the units at Intelligence Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations,

maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2V3B3) IANEC—Facilities Support

Programs that sustain, restore, and modernize Intelligence Infrastructure installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

(2V3C) IANEC—Intelligence Skill Training

Programs that provide specialized intelligence skill training for officers, enlisted personnel, and civilians. This training normally involves instruction in principles and techniques needed to effectively perform noncryptologic intelligence jobs.

(2V3D) IANEC—Family Housing Activities

Programs that support housing on Intelligence installations for military families. Includes family housing leasing and debt payment, construction and improvement, maintenance, and operations programs.

(2V4) IANEC—Other Support Activities

Programs that provide special services and products that facilitate or improve the conduct of military operations.

(2V4A) IANEC—Geophysical Information

Programs that support weather and meteorological activities. Includes the Navy and Air Force weather services, oceanographic services, and other related activities.

(2V4B) IANEC—Air Traffic Control

Programs that support DoD-operated Air Traffic Control activities.

(2V4C) IANEC—Warfighting Centers, Modeling and Simulation

Programs that support warfighting, wargaming, and battle centers and major modeling and simulation programs.

(2V4D) IANEC—Non-DHP Medical Programs

Programs that procure and maintain contingency hospitals, mobilize medical reservists, identify disease/biological warfare agents, and improve combat medical equipment.

(2V4E) IANEC—Joint Exercises

Programs that conduct CINC-sponsored or JCS directed joint exercises. Funds airlift and sealift of equipment and personnel, expendable supplies (including POL), per diem allowances, and other exercise-related costs.

(2Z) Infrastructure Resource Adjustments

Centralized resource adjustments that were not allocated to the programs affected, e.g., Foreign Currency Fluctuation, Commissary Resale Stocks, and Force Structure Deviation.

APPENDIX D:
PE ASSIGNMENT TO THE F&IC BY CATEGORY

This appendix is limited to PEs with resources from FY 1975 through FY 2002 as of the FY 2002 President's Budget. PEs that have come into use since that time, along with PEs assigned to the National Foreign Intelligence Program (F&IC 1X2A), are not shown. Those with .MIL access can obtain the most current information from the FYDP Structure Management System (FSM) Web site at http://www.ra.pae.osd.mil/fsm/.

(1) Forces

Military units assigned to the Combatant Commands, their command and control elements, and their organic supporting units. The resources (dollars, manpower, and equipment) allocated to these units are associated with forces. In addition, agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense are included along with the national and joint military intelligence programs.

No PEs directly assigned to this category.

(1F) Operating Forces

Forces assigned to the Combatant Commands, along with their closely related activities, operating resources and those agencies engaged in U.S. international policy activities under the direct supervision of the Office of the Secretary of Defense.

No PEs directly assigned to this category.

(1F1) Expeditionary Forces

Operating forces designed primarily for non-nuclear operations outside the United States.

No PEs directly assigned to this category.

(1F1A) Strike

Expeditionary forces designed to damage and destroy enemy targets at long ranges from friendly bases. Strike forces are designed to deliver their effects through penetration and withdrawal from enemy territory or by delivery of standoff weapons at extended ranges.

(1F1C) Sea Control

Expeditionary forces designed to deny offensive use of the seas to the enemy and to secure sea-lanes against interdiction. Sea control enables the capabilities of other forces to be brought to bear against the enemy.

(1F3D) Space Combat

Space forces and supporting elements designed primarily to conduct combat operations using space-based weapons.

No PEs directly assigned to this category.

(1X) Command & Intelligence

Programs that provide effective direction and control of combatant military operations. These programs include dedicated operational headquarters, associated command and control systems, and intelligence collection and exploitation.

No PEs directly assigned to this category.

(1X1) Operational Command

Combatant Command headquarters and component headquarters (as defined in DoDD 5100.73) primarily responsible for directing and controlling the employment of global or theater-level U.S. military forces along with the technical means for exercising operational control.

No PEs directly assigned to this category.

(1X1A) Operational Headquarters

Combatant Command headquarters and component headquarters responsible for the exercise of operational control over the employment of U.S. military forces.

(2) Infrastructure

Departmental or Agency-assigned activities that provide manpower, materiel, facilities, services, and information needed by units assigned to the Combatant Commands. Infrastructure is the means of producing and sustaining the force. Forces (and their sustainment) are products of the infrastructure.

No PEs directly assigned to this category.

(2A) Force Installations

Installations at which units in the forces category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2A1) Force Installations—Headquarters & Other Administrative Activities

Force installations management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

No PEs directly assigned to this category.

(2A2) Force Installations—Installation Support

Installations at which units in the Forces category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2A2A) Force Installations—Environmental Programs

Programs that protect or restore the environment on forces installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2A2B) Force Installations—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at force installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2A2B1) Force Installations—Base Operations Support

The services and organizations necessary to house and sustain the units at force installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2C) Communications & Information Infrastructure (C&II)

Programs that provide secure information distribution, processing, storage, and display. The major elements include long-haul communications systems, base computing systems, Defense Enterprise Computing Centers and detachments, and information assurance programs. (Note: communication and computer activities dedicated to other Infrastructure categories are assigned to those categories.)

No PEs directly assigned to this category.

(2C1) C&II—Headquarters & Other Administrative Activities

Communications and information management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

(2C2) C&II—Installation Support

Installations at which units in the Communications & Information Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2C2A) C&II—Environmental Programs

Programs that protect or restore the environment on Communications & Information Infrastructure installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2C2B) C&II—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Communications & Information Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2C2B1) C&II—Base Operations Support

The services and organizations necessary to house and sustain the units at Communications & Information Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2D) Science & Technology Program (S&TP)

The program of scientific research and experimentation within the Department of Defense that seeks to advance fundamental science relevant to military needs and determine if the results can be successfully applied to military use. The Science & Technology Program is defined as those Program Elements containing resources from Budget Activity 1, 2, or 3 of the RDT&E appropriations.

No PEs directly assigned to this category.

(2D1) S&TP—Basic Research

Science and technology programs with the purpose of increasing scientific understanding in those fields of physical, engineering, environmental, and life sciences relevant to military applications but without necessarily defined linkages to specific products or processes.

(2E) Acquisition Infrastructure

Acquisition Infrastructure activities develop, test, evaluate, and manage the procurement of military equipment and supporting systems. These activities also provide technical oversight throughout each system's useful life.

No PEs directly assigned to this category.

(2E1) Acquisition—Headquarters & Other Administrative Activities

Acquisition management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

0308698A	Mgt HQ—Svc Acq Exec Chartered PEOs (Prog 3)

(2E2) Acquisition—Installation Support

Installations at which units in the Acquisition Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2E2A) Acquisition—Environmental Programs

Programs that protect or restore the environment on Acquisition Infrastructure installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

0605853A	Environmental Conservation
0605853F	Environmental Conservation
0605854A	Pollution Prevention
0605854F	Pollution Prevention
0605856A	Environmental Compliance
0605856F	Environmental Compliance
0605857A	Army Acquisition Pollution Prevention Program

(2E2B) Acquisition—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Acquisition Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2E2B1) Acquisition—Base Operations Support

The services and organizations necessary to house and sustain the units at Acquisition Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

0605896N	Base Ops—RDT&E

(2E2B2) Acquisition—Base Communications

Programs that provide communications services at Acquisition Infrastructure installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

No PEs directly assigned to this category.

(2E2C) Acquisition—Facilities Support

Programs that sustain, restore, and modernize Acquisition Infrastructure installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

0605851N	Facilities and Installations Support

0605894A	RPMA—RDT&E (H)
0605894F	RPMA—RDT&E (H)

(2E3) Acquisition—Contract Oversight

Activities providing acquisition contract management services and auditing.

0507205N	Procurement Operations
0605013BL	Information Technology Development
0701113BL	Procurement Operations
0701113F	Procurement Operations (H)
0701113N	Procurement Operations
0701113S	Procurement Operations
0708109M	Service Support to DLA
0708109N	Service Support to DLA
0708110A	Service Support to DLA
0708110F	Service Support to DLA
0708110M	Service Support to DLA
0708110N	Service Support to DLA
0901116R	DCAA Communications
0901516R	Defense Contract Audit Agency Activities
1160410A	Service Support to SOCOM Acquisition Activities
1160410JBB	SOCOM Acquisition Activities

(2E4) Acquisition—Program Management

Acquisition program managers oversee development and procurement of military equipment and supporting systems. These activities also provide technical oversight throughout each system's useful life.

0102419A	Aerostat Joint Project Office
0207027F	AC2ISR Center
0208615A	Auto Acq Mgt & Spt: Project Managers Program 2
0305123F	AFCC Engineering and Installations
0308614A	Info Systems Selection Acquisition Activities
0308615A	Auto Acq Mgt & Spt: Project Managers Program 3
0506284N	R&D Laboratories and Facilities Management Support
0506806F	Acquisition and Command Support (AFR)
0508714N	System Executive Office—Manpower and Personnel
0603304A	Army BMD Support to BMDO
0603874C	BMD Technical Operations
0603875C	International Cooperative Programs
0604740F	Integrated Command & Control Applications (IC2A)
0604764K	Adv IT Services Joint Pgm Office (AITS-JPO)
0605001N	R&D Laboratories (IF)
0605010DN	Research and Development Activities
0605104A	Los Alamos Meson Physics Facility
0605126A	Joint Theater Air and Missile Defense Organization
0605126J	Joint Theater Air and Missile Defense Organization
0605126JCA	Joint Theater Air and Missile Defense Organization
0605218C	Ballistic Missile Defense RDT&E Management & Spt
0605502A	Small Business Innovative Research
0605502BP	Small Business Innovative Research—Chem Bio Def
0605502D	Small Business Innovative Research (H)
0605502D8Z	Small Business Innovative Research
0605502E	Small Business Innovative Research
0605502F	Small Business Innovative Research
0605502HP	Small Business Innovative Research
0605502N	Small Business Innovative Research
0605606A	Aircraft Certification
0605790D	Small Business Innovative Research Admin (H)
0605790D8Z	Small Business Innovation Research Administration
0605801A	Programwide Activities
0605802A	International Cooperative Research and Development
0605806F	Acquisition and Command Support
0605854M	Marine Corps System Command
0605861N	RDT&E Science and Technology Management
0702806A	Acquisition and Management Support
0702806F	Acquisition and Management Support
0702808A	Acquisition Support to Program Executive Officers

(2E4) Acquisition—Program Management—Continued

0708611F	Support Systems Development
0708615A	Automated Acq Mgt & Spt: Project Mgrs-Program 7

1120417JBB	Joint Combat Development Activities--SOCOM
1140415BB	Military Construction for Combat Development Actys

(2L) Central Logistics

Central Logistics programs provide supplies, depot-level maintenance of military equipment and supporting systems, transportation of material, and other products and services to customers throughout the DoD.

No PEs directly assigned to this category.

(2L1) Central Logistics—Headquarters & Other Administrative Activities

Central logistics management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

0507298N	Mgt HQ (Logistics)
0507310N	Service Support to DLA
0702898A	Mgt HQ (Logistics)
0702898DS	Mgt HQ—Logistics—DWCF
0702898F	Mgt HQ (Logistics)
0702898M	Mgt HQ—Marine Corps Materiel Readiness Command
0702898N	Mgt HQ (Logistics)
0708098A	Mgt HQ—Traffic Management
0708119DF	DLA Information Services (DWCF)

(2L2) Central Logistics—Installation Support

Installations at which units in the Central Logistics category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2L2A) Central Logistics—Environmental Programs

Programs that protect or restore the environment on Central Logistics installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

0702856A	Environmental Compliance
0702856M	Environmental Compliance
0702856N	Environmental Compliance
0708008A	Defense Environmental Restoration Program
0708008BR	Defense Environmental Restoration Program
0708008D	Defense Environmental Restoration Program
0708008F	Defense Environmental Restoration Program
0708008H	Defense Environmental Restoration Program
0708008N	Defense Environmental Restoration Program
0708053A	Environmental Conservation
0708053F	Environmental Conservation
0708053M	Environmental Conservation
0708053N	Environmental Conservation
0708054A	Pollution Prevention
0708054F	Pollution Prevention
0708054M	Pollution Prevention
0708054N	Pollution Prevention
0708056F	Environmental Compliance

(2L2B) Central Logistics—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Central Logistics installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2L2B1) Central Logistics—Base Operations Support

The services and organizations necessary to house and sustain the units at Central Logistics installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

0507196F	Base Ops (Logistics) (AFR)
0507296N	Base Ops (Logistics Units)
0702096N	Base Ops—Logistics (IF)
0702890A	Visual Information Activities—Logistics
0702890F	Visual Information Activities—Logistics
0702890M	Visual Information Activities—Logistics
0702896A	Base Ops—Logistics
0702896F	Base Ops—Logistics
0702896M	Base Ops—Logistics
0702896N	Base Ops—Logistics
0708029F	Engineering Installation Support -- AFMC

(2L2B2) Central Logistics—Base Communications

Programs that provide communications services at Central Logistics installations. This category does not include long-haul communications service, support to other Infrastructure categories, or communications capabilities organic to Forces units.

0702895A	Base Communications—Logistics
0702895F	Base Communications—Logistics
0702895M	Base Communications—Logistics
0702895N	Base Communications—Logistics

(2L2C) Central Logistics—Facilities Support

Programs that sustain, restore, and modernize Central Logistics installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

0702876A	Minor Constr (RPM)—Logistics
0702876F	Minor Constr (RPM)—Logistics
0702876M	Minor Constr (RPM)—Logistics
0702876N	Minor Constr (RPM)—Logistics

0708010M	Second Destination Transportation
0708010N	Second Destination Transportation
0708028A	Other Transportation Related Activities

(2M) Defense Health Program (DHP)

Medical infrastructure and systems managed by ASD(Health Affairs) that provide health care to military personnel, dependents, and retirees.

No PEs directly assigned to this category.

(2M1) DHP—Headquarters & Other Administrative Activities

Defense Health Program management headquarters and their supporting functions and initiatives. Management Headquarters are defined in DoDD 5100.37.

0603725D	Computers and Comms to Reduce Medical Costs
0807709A	TRICARE Management Activity
0807709F	TRICARE Management Activity
0807709HP	TRICARE Management Activity
0807709HPT	TRICARE Management Activity
0807709N	TRICARE Management Activity
0807798A	Mgt HQ (Health Care)
0807798D	Mgt HQ (Health Care) (H)
0807798F	Mgt HQ (Health Care)
0807798HP	Mgt HQ (Health Care)
0807798HPT	Mgt HQ—TMA
0807798N	Mgt HQ (Health Care)
0809710A	Service Support to Def Medical Support Actys (H)
0809710F	Service Support to Def Medical Support Actys (H)
0809710N	Service Support to Def Medical Support Actys (H)
0901219F	Joint Health Care Management Eng. Team (JHMET)

(2M2) DHP—Installation Support

Installations at which units in the Defense Health Program category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

0807778F	Maint and Repair (RPM)—CONUS—Health Care

(2M2A) DHP—Environmental Programs

Programs that protect or restore the environment on Defense Health Program installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

(2P2) CPA—Installation Support

Installations at which units in the Central Personnel Administration category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

(2P2A) CPA—Environmental Programs

Programs that protect or restore the environment on Central Personnel Administration installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2P2B) CPA—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Central Personnel Administration installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2P2B1) CPA—Base Operations Support

The services and organizations necessary to house and sustain the units at Central Personnel Administration installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2T) Central Training

Programs that provide formal training to personnel at central locations away from their duty stations (school house).

No PEs directly assigned to this category.

(2T1) Central Training—Headquarters & Other Administrative Activities

Central training management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

0508198N	Mgt HQ (Training)
0804775F	Operational HQ (Technical Training)
0804777F	Operational HQ (Flying Training)
0804779F	Air University Headquarters
0805798A	Mgt HQ (Training)
0805798F	Mgt HQ (Training)
0805798N	Mgt HQ (Training)

(2T2) Central Training—Installation Support

Installations at which units in the Central Training category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2T2A) Central Training—Environmental Programs

Programs that protect or restore the environment on Central Training installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

0805753A	Environmental Conservation—Training
0805753F	Environmental Conservation—Training
0805753M	Environmental Conservation—Training

(2T2B) Central Training—Base Operations & Base Communications

The services and organizations necessary to house and sustain the units at Central Training installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

No PEs directly assigned to this category.

(2T2B1) Central Training—Base Operations Support

The services and organizations necessary to house and sustain the units at Central Training installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

(2T4) Central Training—Individual Training

Programs that provide formal training to personnel at central locations away from their duty stations (school house training).

No PEs directly assigned to this category.

(2T4A) Central Training—Enlisted Personnel

Programs that provide formal training to enlisted personnel at central locations away from their duty stations (school house training).

No PEs directly assigned to this category.

(2T4A1) Central Training—Recruit Training

Training infrastructure programs that provide basic military training and indoctrination to enlisted recruits.

0508892A	Recruit Training (ARNG)
0804711A	Recruit Training Units
0804711F	Recruit Training Units
0804711M	Recruit Training Units
0804711N	Recruit Training Units
0804761A	Integrated Recruit and Skill Training Units

(2T4A2) Central Training—Enlisted Technical Training

Training infrastructure programs that provide technical training to enlisted personnel, (Note: Data not currently available in Program Elements.)

No PEs directly assigned to this category.

(2T4A3) Central Training—Enlisted Leadership Training

Training infrastructure programs that provide leadership training to enlisted personnel. (Note: Data not currently available in Program Elements.)

No PEs directly assigned to this category.

(2T4B) Central Training—Officer Personnel

Programs that provide formal training to officer personnel at central locations away from their duty stations (school house training).

No PEs directly assigned to this category.

(2T4B1) Central Training—Initial Officer Training

Training infrastructure programs that provide basic military training and indoctrination to officer candidates through college commissioning programs, officer candidate/training schools, and the three service academies.

0804721A	Service Academies
0804721F	Service Academies
0804721N	Service Academies

0804773A	ATC/Ground Support of Aviation Flight Training

(2T4B3) Central Training—Career Officer Training

Training infrastructure programs that provide career training to officer personnel. (Note: Data not currently available in Program Elements.)

No PEs directly assigned to this category.

(2T4B4) Central Training—Officer Leadership Training

Training infrastructure programs that provide leadership training to officer personnel. (Note: Data not currently available in Program Elements.)

No PEs directly assigned to this category.

(2T4C) Central Training—Civilian Education

Programs that provide training, education, and development of DoD civilian executives, management officials, supervisors, and employees as called for by applicable directives.

0808751A	Civilian Training, Education, and Development
0808751F	Civilian Training, Education, and Development
0808751M	Civilian Training, Education, and Development
0808751N	Civilian Training, Education, and Development

(2T4D) Central Training—Reserve Training

Training infrastructure programs that provide recruit and officer candidate training followed by the full range of flight training, progressive skill training, professional military education opportunities.

0502608F	Training Aircraft (ANG)
0502717F	Training Aircraft (AFR)
0508111N	Recruit Training (NR)
0508112N	Professional and Skill Progression Training (NR)

(2T4E) Central Training—Professional & Skill Training

Training infrastructure programs that provide a range of progressive skill training and professional military education opportunities, including Acquisition and Language training and advanced academic degrees.

No PEs directly assigned to this category.

(2T4E1) Central Training—General Skill Training

Training infrastructure programs that teach (1) entry-level job skills after completion of initial military training and (2) skill progression training needed for an individual to acquire intermediate and advanced skills later in his or her military career.

0804731A	General Skill Training
0804731D	General Skill Training
0804731F	General Skill Training
0804731M	General Skill Training
0804731N	General Skill Training

(2T4E2) Central Training—Acquisition Skill Training

Training infrastructure programs that provide acquisition education and training through the USD(AT&L)-managed scholarship program, the Defense Acquisition University, service-sponsored schools, Acquisition Enhancement Program, and other mandatory DoD acquisition courses.

0804753A	Acquisition Training
0804753F	Acquisition Training
0804753M	Acquisition Training
0804753N	Acquisition Training
0804753S	Acquisition Training
0804753SB	Acquisition Training

(2T4E3) Central Training—Professional Military Education

Training infrastructure programs that provide (1) professional military education at each level of career progression and (2) advanced academic degrees needed for work in specific organizations and tasks.

0508142M	Prof. Development Education and Skill Progression
0804750A	Service Support to National Defense University

0804752M	Other Professional Education
0804752N	Other Professional Education
0902507M	Service Support to Chairman, JCS Controlled Actys
0902507N	Service Support to Chairman, JCS Controlled Actys

(2T4E4) Central Training—Foreign Language Training

Training infrastructure programs that provide language instruction through the Defense Language Institute, extended as necessary to meet SOF Language Training requirements.

0303031A	Total Army Language Program
0804737A	Defense Foreign Language Training
1180184BB	SOF Language Training

(2T4E5) Central Training—Other Professional & Skill Training

Training infrastructure programs that provide training opportunities in areas not included in other categories. Examples are space operations and business management.

0804735F	Undergraduate Space Training
0804755S	Business Management Training

(2T5) Central Training—Transition Training

Training conducted in field locations that is required to transition individuals and units to new weapon systems, provide specialized pre-deployment training, and develop or teach new tactics through special unit-level exercises.

0101897F	Training (Offensive)
0102897F	Training (Defensive)

(2U) Departmental Management (DM)

Headquarters whose primary mission is to manage the overall programs and operations of the Department of Defense and its components. Also includes administrative, forces, and international management headquarters, and defense-wide support activities that are centrally managed. Excludes combatant headquarters (assigned to Command & Intelligence Infrastructure) and the management headquarters that are associated with other Infrastructure categories.

No PEs directly assigned to this category.

(2U1) DM—Headquarters & Other Administrative Activities

Departmental management headquarters and their supporting functions and initiatives. Management headquarters are defined in DoDD 5100.37.

No PEs directly assigned to this category.

(2U1A) DM—Departmental Headquarters

The Washington headquarters of the Department of Defense.

No PEs directly assigned to this category.

(2U1A1) DM—OSD Staff

The Office of the Secretary of Defense and its supporting activities.

0305815D	General Support for SO/LIC
0901228A	Service Support to Def Human Resources Activity
0901228F	Service Support to Def Human Resources Activity
0901228M	Service Support to Def Human Resources Activity

(2U2) DM—Installation Support

Installations at which units in the Departmental Management category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

No PEs directly assigned to this category.

(2U2A) DM—Environmental Programs

Programs that protect or restore the environment on Departmental Management installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

0603720D	Environmental Special Project
0901256F	Environmental Compliance

0901536D	Defense POW & MIA Activities (H)
0901536D8P	Defense POW & MIA Activities
0901540A	Service Support to Defense POW and MIA Activities
0901540F	Service Support to Defense POW and MIA Activities
0901540M	Service Support to Defense POW and MIA Activities
0901540N	Service Support to Defense POW and MIA Activities
0901546M	Service Support to Def Finance & Accounting Svc

(2U3B3) DM—Other Defense-Wide Activities

Department-wide support activities that are managed by the Office of the Secretary of Defense.

0308618A	Single Agency Manager (SAM)—Core Program
0308620A	Single Agency Manager (SAM)—Other Programs
0605013D8Z	Prototype Accounting Systems
0605123D8Z	Interagency Export License Automation
0605124D8Z	Defense Travel System
0708116A	Service Support to Defense Support Activities (H)
0708116M	Service Support to Defense Support Activities
0708116N	Service Support to Defense Support Activities (H)
0708698S	Defense Support Activities (H)
0901211D	Construction (Planning and Design)
0901222F	Defense Courier Service
0901505A	Service Support to Defense Legal Services
0901505F	Service Support to Defense Legal Services
0901505N	Service Support to Defense Legal Services
0901506A	Service Support to Office of Economic Adjustment
0901506F	Service Support to Office of Economic Adjustment
0901506N	Service Support to Office of Economic Adjustment
0901510D	US Court of Military Appeals, Defense (H)
0901510D8U	US Court of Military Appeals, Defense
0901511D	Contingencies
0901515D	Other Support Activities
0901515D8F	Other Support Activities (0514 O&M Defensewide)
0901515D8Z	Other Support Activities
0901525D	Office of Economic Adjustment (H)
0901525D8E	Office of Economic Adjustment
0901531D	WHS/White House Support Group (H)
0901531D8W	White House Support Group

(2U3B3) DM—Other Defense-Wide Activities—Continued

0901539D8Z	OSD Civil Military Programs
0903010D	Defense Office of Hearings and Appeals (H)
0903010D8L	Defense Office of Hearings and Appeals
0903188F	Service Support to Defense Support Activities
0903188M	Service Support to Defense Support Activities
0903188N	Service Support to Defense Support Activities
0903198S	Defense Support Activities
0904903D	Defense-Wide Resources

(2U4) DM—International Activities

Programs that fund DoD participation in NATO and support other international activities of the department.

1001004A	International Activities
1001004F	International Activities
1001004M	International Activities
1001004N	International Activities
1001005D	NATO Infrastructure
1001009JP	International HQ--PACOM
1001010A	Miscellaneous Support to other Nations
1001010F	Miscellaneous Support to other Nations
1001010N	Miscellaneous Support to other Nations
1001016D	Humanitarian Assistance (H)
1001016D8Z	Humanitarian Assistance

1001491JNA	International Activities--NATO
1001510A	Service Support to Other Nations--IADB
1001510F	Service Support to Other Nations--IADB
1001510JCA	Support to Other Nations--IADB

(2U5) DM—Base Realignment & Closure

Programs intended to size the number of DoD installations to more closely approximate what is needed for projected DoD operations. Includes DoD BRAC programs.

0208004A	Base Closure and Realignment Activities
0208004D	Base Closure and Realignment Activities
0208004F	Base Closure and Realignment Activities
0208004K	Base Closure and Realignment Activities
0208004M	Base Closure and Realignment Activities
0208004N	Base Closure and Realignment Activities
0208004S	Base Closure and Realignment Activities
0208005D	Base Realignment and Closure

(2V) Infrastructure Activities Not Elsewhere Categorized (IANEC)

These programs do not fit neatly in the other categories. They include programs that (1) provide management, basing, and operating support for DoD intelligence activities; (2) conduct weather and oceanographic activities; (3) manage and upgrade DoD-operated Air Traffic Control activities; (4) support warfighting, wargaming, and battle centers and major modeling and simulation programs; (5) procure and maintain contingency hospitals, mobilize medical reservists, identify disease/biological warfare agents, and improve combat medical equipment; and (6) fund CINC-sponsored or JCS-directed joint exercises.

No PEs directly assigned to this category.

(2V3) IANEC—Intelligence Infrastructure

Programs that provide management, basing, and operating support for the DoD Intelligence activities.

No PEs directly assigned to this category.

(2V3A) IANEC—Headquarters & Other Administrative Activities

Intelligence Management Headquarters and their supporting functions and initiatives. Management Headquarters are defined in DoDD 5100.37.

0301198A	Mgt HQ (Cryptologic)
0301198F	Mgt HQ (Cryptologic)
0301198G	Mgt HQ (Cryptologic)
0301198N	Mgt HQ (Cryptologic)
0301298N	Mgt HQ (Intelligence, Investigation and Security)
0301398A	Mgt HQ—GDIP
0301398F	Mgt HQ—GDIP
0301398L	Mgt HQ—GDIP
0301398N	Mgt HQ—GDIP
0304398BQ	Mgt HQ- National Imagery and Mapping Agency (NFIP)
0305128L	Security and Investigative Activities
0305298A	Mgt HQ (Foreign Counterintelligence)
0305298L	Mgt HQ (Foreign Counterintelligence)
0305598LC	Mgt HQ—Central Imagery Office
0305798B	DMA Headquarters Support Activity
0305898B	Mgt HQ (Auxiliary Forces)
0305898BQ	Mgt HQ—NIMA (JMIP)
0305898L	Mgt HQ (Auxiliary Forces)
0306098L	Mgt HQ—Joint Military Intelligence Program
0503098F	Mgt HQ (Cryptologic) (AFR)
0503098N	Mgt HQ (Cryptologic)
0503198N	Mgt HQ (General Defense Intelligence Program)

(2V3B) IANEC—Installation Support

Installations at which units in the Intelligence Infrastructure category are based. Includes the services and organizations at these installations necessary to house and sustain the units and support their daily operations. Also includes programs that sustain, restore, and modernize each installation's buildings and protect its environment.

0301194F	RPMA—Cryptologic (H)
0901211G	Construction (Planning and Design)

(2V3B1) IANEC—Environmental Programs

Programs that protect or restore the environment on Intelligence Infrastructure installations. Included are programs for pollution prevention, environmental compliance, environmental restoration, environmental conservation, and environmental research. This category does not include environmental programs that are specifically identified to other Infrastructure categories.

0301156F	Environmental Compliance

(2V3B2) IANEC—Base Operations Support

The services and organizations necessary to house and sustain the units at Intelligence Infrastructure installations and support their daily operations. Includes base physical security programs, base administration, retail supply operations, maintenance of installation equipment, bachelor housing operations and furnishings, visual information activities, base communications, and other base and personnel support services. This category does not include base operations support programs that are specifically identified to other Infrastructure categories.

0301196F	Base Ops—Cryptologic
0301196N	Base Ops—Cryptologic
0305132B	Defense Mapping Agency—Communications

(2V3B3) IANEC—Facilities Support

Programs that sustain, restore, and modernize Intelligence Infrastructure installations. Includes real property services, maintenance and repair, minor construction, construction, and facilities demolition and disposal. This activity does not include facilities support that is specifically identified to other Infrastructure categories.

0301176F	Minor Constr (RPM)—Cryptologic
0301176N	Minor Constr (RPM)—Cryptologic
0301178F	Maint and Repair (RPM)—Cryptologic
0301178N	Maint and Repair (RPM)—Cryptologic
0301179F	Real Property Services (RPS)—Cryptologic

(2V3C) IANEC—Intelligence Skill Training

Programs that provide specialized intelligence skill training for officers, enlisted personnel, and civilians. This training normally involves instruction in principles and techniques needed to effectively perform noncryptologic intelligence jobs.

0305147G	Interagency Training Center (ITC)
0804733A	General Intelligence Skill Training
0804733F	General Intelligence Skill Training
0804733M	General Intelligence Skill Training
0804733N	General Intelligence Skill Training
0804734A	Cryptologic/SIGINT- Related Skill Training
0804734F	Cryptologic/SIGINT- Related Skill Training
0804734M	Cryptologic/SIGINT- Related Skill Training
0804734N	Cryptologic/SIGINT- Related Skill Training

(2V3D) IANEC—Family Housing Activities

Programs that support housing on Intelligence installations for military families. Includes family housing leasing and debt payment, construction and improvement, maintenance, and operations programs.

0808741G	Family Housing—New Construction
0808742G	Family Housing—Improvements
0808744G	Family Housing—Leasing
0808744L	Family Housing—Leasing
0808745G	Family Housing—Operations
0808745L	Family Housing—Operations
0808746G	Family Housing—Maintenance

(2V4) IANEC—Other Support Activities

Programs that provide special services and products that facilitate or improve the conduct of military operations.

No PEs directly assigned to this category.

(2V4A) IANEC—Geophysical Information

Programs that support weather and meteorological activities. Includes the Navy and Air Force weather services, oceanographic services, and other related activities.

0305111F	Weather Service
0305111N	Weather Service
0305112N	Oceanography
0305117F	Weather/NOTAM Communications
0305131N	Mapping, Charting, and Geodesy
0305801A	Service Support to DMA
0305801F	Service Support to DMA
0305801M	Service Support to DMA
0305801N	Service Support to DMA
0503112F	Weather Service (ANG)
0503124F	Weather Service (AFR)
0503170N	Weather Service
0604528N	SWATH (Small Waterplane Area Twin Hull) Oceanograp
0604707F	Weather Systems—Eng Dev (H)

(2V4B) IANEC—Air Traffic Control

Programs that support DoD-operated Air Traffic Control activities.

0204138M	Air Traffic Control Squadrons (MATCALS/ATC)
0204138N	Air Traffic Control Squadrons (MATCALS/ATC)
0208114A	Air Traffic Control—Tactical
0305114A	Traffic Control/Approach/Landing Sys-FY 1987 (H)
0305114F	Air Traf Control/Approach/Landing System (ATCALS)

(2V4B) IANEC—Air Traffic Control—Continued

0305137F	National Airspace System (NAS) Plan
0503110F	Air Traffic Control (ANG)
0503313F	Air Traffic Control/Telecomm—Electronic Support
0503314F	Traffic Control/ Approach/Landing (ATCALS) (AFR)
0604504N	Air Control
0804774A	ATC Management

(2V4C) IANEC—Warfighting Centers, Modeling & Simulation

Programs that support warfighting, wargaming, and battle centers and major modeling and simulation programs.

0207028F	Joint Expeditionary Force Experiment
0207601F	USAF Modeling and Simulation
0207602F	AF Strategic Planning
0207605F	Wargaming and Simulation Centers
0208049A	Joint Warfighting Center
0208049F	Joint Warfighting Center
0208049J	Joint Warfighting Center
0208052F	Joint Analytical Model Improvement Program
0208052J	Joint Analytical Model Improvement Program
0305174F	Space Warfare Center
0305188A	Joint C4ISR Battle Center (JBC)
0305188F	Joint C4ISR Battle Center (JBC)
0305188J	Joint C4ISR Battle Center (JBC)
0305188JFC	Joint Battle Center--Joint Forces Command
0305188N	Joint C4ISR Battle Center (JBC)
0604738A	JSIMS Core Program
0604742A	Constructive Simulation Systems Development
0901216F	Operational Capability & Air Power Assess (OCAPA)
0901227F	Air Force Agency for Modeling and Simulation
0902740J	Joint Simulation System

(2V4D) IANEC—Non-DHP Medical Programs

Programs that procure and maintain contingency hospitals, mobilize medical reservists, identify disease/biological warfare agents, and improve combat medical equipment.

0208038DF	Medical Contingency Hospitals
0208038F	Medical Contingency Hospitals
0508131N	Care in Defense Facilities
0508136N	Health Activities
0508137N	Dental Care Activities
0508211F	Medical Service Units (AFR)
0508213F	Medical Mobilization Augmentees (AFR)
0508221F	Medical Readiness Units (ANG)
0508792N	Station Hospitals and Medical Clinics
0508798N	Mgt HQ (Health Care)
0508897A	Medical Support Units (ARNG)
0508997A	Medical Support Units (AR)
0522208A	Force Readiness Operations Support
0532208A	Force Readiness Operations Support
0603718D	Medical Research
0604807A	Medical Materiel/Medical Biological Defense Equip
0807789A	Drug Abuse Treatment Actys in OSD Counternarc Prog
0809703A	Service Support to OSD
0809703F	Service Support to OSD

(2V4E) IANEC—Joint Exercises

Programs that conduct CINC-sponsored or JCS directed joint exercises. Funds airlift and sealift of equipment and personnel, expendable supplies (including POL), per diem allowances, and other exercise-related costs.

0208011A	CJCS Exercise Program
0208011F	CJCS Exercise Program
0208011J	CJCS Exercise Program
0208011M	CJCS Exercise Program
0208011N	CJCS Exercise Program
0531111A	Unified Commands
1120111BB	JCS Directed & Coord Exercises (Active Army)
1120211BB	JCS Directed & Coord Exercises (Active Navy)

(2V4E) IANEC—Joint Exercises—Continued

1120412BB	Deployment Exercises (HQ USSOCOM)
1120416BB	Joint Combined Exchange Training
1120511BB	JCS Directed & Coord Exercises (Active Air Force)
1120611BB	JCS Directed & Coord Exercises (Air Nat Guard)
1120612BB	Deployment Exercises (Air National Guard)
1120711BB	JCS Directed & Coord Exercises (AFR)
1120811BB	JCS Directed & Coord Exercises (Army Nat Guard)
1120812BB	Deployment Exercises (Army National Guard)
1120911BB	JCS Directed & Coord Exercises (Army Res)
1120912BB	Deployment Exercises (Army Reserve)

(2Z) Infrastructure Resource Adjustments

Centralized resource adjustments that were not allocated to the programs affected, e.g., Foreign Currency Fluctuation, Commissary Resale Stocks, and Force Structure Deviation.

0208022A	Foreign Currency Fluctuations, Defense
0208022F	Foreign Currency Fluctuations, Defense
0208022N	Foreign Currency Fluctuations, Defense
0208127F	Industrial Fund and Stock Fund Support (H)
0708027A	Industrial Fund and Stock Fund Support (H)
0708027N	Industrial Fund and Stock Fund Support (H)
0708033F	Stock Fund Cash Requirements (Service-Managed)
0708037S	National Defense Stockpile Transaction Fund
0708065F	Stock Fund Operations
0708200F	Defense Business Operations Fund
0808722A	Force Structure Deviation
0808722F	Force Structure Deviation
0808722M	Force Structure Deviation
0808722N	Force Structure Deviation
0904901A	Undistributed Adjustments
0904901D	Undistributed Adjustments
0904901F	Undistributed Adjustments
0909900E	Financing for Expired Account Adjustments
0909900F	Financing for Expired Account Adjustments
0909900M	Financing for Expired Account Adjustments
0909900N	Financing for Expired Account Adjustments
0909900S	Financing for Expired Account Adjustments
0909910N	Outsourcing Initiatives
0909980F	Judgment Fund Reimbursement
0909999A	Financing for Canceled Account Adjustment
0909999D	Financing for Canceled Account Adjustment
0909999D8Z	Financing for Canceled Account Adjustment
0909999E	Financing for Canceled Account Adjustment
0909999F	Financing for Canceled Account Adjustment
0909999M	Financing for Canceled Account Adjustment
0909999N	Financing for Canceled Account Adjustment
0909999S	Financing for Canceled Account Adjustment
1108722BB	Undistributed Adjustments—SOCOM

APPENDIX E:
PE ASSIGNMENT TO THE F&IC BY PE

This appendix is limited to PEs with resources from FY 1975 through FY 2002 as of the FY 2002 President's Budget. PEs that have come into use since that time, along with PEs assigned to the National Foreign Intelligence Program (F&IC 1X2A), are not shown. Those with .MIL access can obtain the most current information from the FYDP Structure Management System (FSM) Web site at http://www.ra.pae.osd.mil/fsm/.

PE	PE TITLE	F&IC Assignment
0101113F	B-52 Squadrons	(1F1A) Strike
0101115F	FB-111 Squadrons (H)	(1F1A) Strike
0101118F	Short Range Attack Missile (AGM-69)	(1F2A) Deterrence

14. ABSTRACT

This paper describes a framework that organizes and displays every dollar, person, and piece of equipment shown in DoD's Future Years Defense Program (FYDP). The framework, called Force & Infrastructure Categories (F&IC), represents a conceptual model of the DoD that is based on two types of organizations, Forces and Infrastructure, and reflects the division of labor between them. Forces organizations are the warfighting ships, squadrons, and battalions assigned to the Combatant Commands. Infrastructure organizations are the laboratories, depots, shipyards, test ranges, schools, and hospitals assigned exclusively to the Military Departments. The F&IC model presents Forces as the tools Combatant Commanders use to fight wars and Infrastructure as the set of activities needed to create and sustain those Forces. The F&IC is designed to provide senior decision makers with the revised definitions, relevant categories, and new vocabulary needed to frame issues, communicate intent, and control implementation in a new era of national defense.

15. SUBJECT TERMS
Force & Infrastructure Categories (F&IC); Future Years Defense Program (FYDP); Department of Defense; Military Forces (United States); Infrastructure; Resource Management; Planning, Programming, and Budgeting System (PPBS)
